- SupraMax 56i Pro V.92 PCI Modem
- Quick Start Guide
- Warranty Card & FCC Notice
- RJ-11 Telephone Cable
- Modem Installation CD
- AOL Installation CD
  (not required)

PREINSTALLATION INFORMATION

Before installing your new modem we recommend that you first remove any previous internal modem and accompanied software from your system. This step is especially needed if your last modem uses a chipset similar to the new modem. Please refer to your previous modem manufacturer for exact instructions to remove their hardware and software from your system. Most modems will install themselves into the add/remove programs accessible from the control panel. Please make sure your previous modem is not within this list prior to installing our hardware.

HARDWARE INSTALLATION

The following steps will guide you through the hardware installation of your new modem. Please refer to your system documentation for information regarding how to open your computer case and how to install a PCI card.

1. Turn off the power to the computer.
2. Remove the cover to your computer.
3. Locate an available PCI slot. If you had a previous modem and it was in the form of a PCI card you should probably use the same slot the previous modem was in. If you are installing the modem into a PCI slot that has never been used you may need to first remove a metallic slot cover which would otherwise block access to the telephone line connectors on the new modem.
4. Insert the modem into the slot located in the previous step. Apply firm pressure evenly along the card while inserting it into the slot. If you have a tower case we recommend positioning the tower on its side for easier installation. When the modem is properly inserted you should feel it snap into place as it goes into the PCI slot.
5. Examine the newly installed card to ensure it is properly seated into the PCI slot. The gold contacts that sink into the slot should no longer be visible if the card has been correctly inserted into the system.
6. Replace the cover to your computer.

TELEPHONE CABLE CONNECTIONS

1. Insert one end of the supplied telephone cable into the connector marked LINE on the modem, along the metal bracket. The cable should lock into place. You may optionally connect a telephone set to the connector marked PHONE on the back of the modem, along the metal bracket.

2. You may optionally connect a telephone set to the connector marked PHONE on the back of the modem, along the metal bracket.

MODEM DRIVER INSTALLATION

The following information will guide you through installing the modem driver. Please read each step carefully to ensure the driver is being properly installed. The following steps apply to Windows® 98SE, ME, 2000, and XP operating systems only. Please ensure you are using a supported operating system.

1. Turn on the power to the computer. If you receive a new hardware wizard notification click **cancel**.
2. Insert the modem Installation CD into your CD-ROM drive.
3. A prompt will appear asking if you would like to install the modem driver. Click **YES** to continue. Please read the 2 notices listed below if you encounter any problems during this step.

    NOTICE 1: If you are not automatically prompted to install the modem driver you can perform the following actions to install the modem driver. Double click the **My Computer** icon located on your Windows desktop. Locate your CD-ROM drive icon. Using the RIGHT mouse button click the **CD-ROM** Icon.Using the left mouse button click **OPEN**. Double click the **PCILE.EXE** (may be listed as PCILE without the .EXE) to start the installation. If you receive an error you should read the following notice.

    NOTICE 2: If you receive an error from the either of the 2 steps listed above it is due to Windows files not being up to date. This usually will only happen with systems running Windows 98 and that have not had any of the Windows updates applied. If you are encountering this problem we have included the necessary update. Open the **My Computer** icon located on your Windows desktop. Locate your CD-ROM drive icon. Using the RIGHT mouse button click the **CD-ROM** icon. Using the left mouse button click **OPEN**. Double click the **RUNTIME.EXE** (may be listed as RUN TIME without the .EXE) to start the update. You may be prompted to reboot the system, click **YES** if you are prompted. After this step is complete you should restart the modem driver installation by following the instructions listed above, starting at step 1.

4. Windows 2000 / XP Users: Only Users of Windows 2000/XP operating systems will receive a warning about the driver not being digitally signed or does not pass Windows logo testing. Windows 2000 users must click **YES** to install the driver. Windows XP users must click **CONTINUE ANYWAY** to install the driver. This warning only implies that Microsoft has not personally tested our modem driver. The modem has been tested thoroughly by Diamond and also by Conexant, the chipset manufacturer of the modem.

SOFTWARE INSTALLATION

Faxtalk Communicator

Diamond has bundled Faxtalk Communicator with the SupraMax 56i Pro modem. Faxtalk is capable of sending and receiving faxes in addition to voicemail (answering machine). The following instructions will help guide you through the installation of Faxtalk.

1. Insert the installation CD into your CD-ROM drive. The Supra Modem menu will appear. Click the **SOFTWARE INSTALLATION** box. The Software installation menu will appear.
2. Click the **Faxtalk Communicator** box. This will start the installation of Faxtalk. Please follow the on screen instructions to complete the installation.

Internet Call Waiting

Diamond has bundled Net On Hold software by Thought Communications with the SupraMax 56i Pro modem. This software is responsible for alerting you when there is an incoming call when you are connected to the Internet. Net on Hold requires that you are connecting to a V.92 server at your ISP and that the ISP supports the use of modem on hold. Please check with your ISP to be sure they support this feature. The following instructions will help guide you through the installation of Net on Hold.

1. Insert the installation CD into your CD-ROM drive. The Supra Modem menu will appear. Click the **SOFTWARE INSTALLATION** box. The Software Installation menu will appear.
2. Click the **Net On Hold** box. This will start the installation of Net On Hold. Please follow the on screen instructions to complete the installation.
3. After the program is installed you can access the features by clicking the yellow phone icon which should appear in your system tray, just next to the system clock.

Acrobat Reader

Diamond has bundled Adobe Acrobat Reader on the installation CD. Acrobat Reader can be used to view a copy of this quick start guide in addition to other user manuals on the installation CD. The following instructions will help guide you through the installation of Acrobat Reader.

1. Insert the installation CD into your CD-ROM drive. The Supra Modem menu will appear. Click the **SOFTWARE INSTALLATION** box. The Software Installation menu will appear.
2. Click the **Acrobat Reader** box. This will start the installation of Acrobat Reader. Please follow the on screen instructions to complete the installation.

Troubleshooting

Diamond has included troubleshooting steps for most common problems on the installation CD.
Please use the following instructions to navigate to the help area on the installation CD.

1. Insert the modem installation CD into your CD-ROM drive.
2. When the menu appears click the **Troubleshooting** box.
3. A help desk screen will appear with options for support. Please select the option that best describes the issue you are having.
