### DAUGHTER BOARD DRAM CONFIGURATION

Size	Bank 0	Bank 1
4MB	(36) 411000	None
8MB	(36) 411000	(36) 411000

Note : Each system memory card can be connected to a daughter board, for an additional 4 to 8MB of memory. The daughter board's Strips J2 & J3 (component side) plug into the J2 & J3 Strips (solder side) on the system memory boards.

### DAUGHTER BOARD DRAM SWITCH CONFIGURATION FOR CARD 1

Size	Base Memory	SW2/1	SW2/2
5632KB	512KB	Off	Off
5760KB	640KB	Off	On
9728KB	512KB	On	Off
9856KB	640KB	On	On

Note : The system memory card must be filled to maximum capacity (2MB) to implement the daughter board. When the daughter board is plugged into the system memory board the switches previously used to set the base memory size on the system memory card is then used to set the base memory size of the daughter board.

### DAUGHTER BOARD DRAM SWITCH CONFIGURATION FOR CARD 2

Size	Base Memory	SW3/1	SW3/2	SW3/3
11776KB	512KB	Off	Off	N/A
11904KB	640KB	Off	On	N/A
14848KB	512KB	On	Off	On
14976KB	640KB	On	On	On
15744KB	512KB	On	Off	Off
15872KB	640KB	On	On	Off

Note : The system memory card must be filled to maximum capacity (8MB) to implement the daughter board. When the daughter board is plugged into the system memory board, the switches previously used to set the base memory size on the system memory card are then used to set the base memory size of the daughter board.
