FCC Compliance Statement:

This equipment has been tested and found to comply with limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in residential installations. This equipment generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference to radio or television equipment reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

-Reorient or relocate the receiving antenna

-Move the equipment away from the receiver

-Plug the equipment into an outlet on a circuit different from that to which the receiver is connected

-Consult the dealer or an experienced radio/television technician for additional suggestions

You are cautioned that any change or modifications to the equipment not expressly approve by the party responsible for compliance could void Your authority to operate such equipment.

This device complies with Part 15 of the FCC Rules. Operation is subjected to the following two conditions 1) this device may not cause harmful interference and 2) this device must accept any interference received, including interference that may cause undesired operation.

☑6VX7B-4X user's manual

Summary Of Features

Form Factor	• 30.4 cm x 20.3 cm ATX Size form factor, 4 layers PCB.

CPU	• Socket 370 processor
	   Intel Pentium® *!!!* 100/133MHz FSB, FC-PGA
	   Intel Celeron™ 66MHz FSB, FC-PGA
	   VIA Cyrix® III 100/133MHz FSB, PPGA
	• 2nd cache in CPU (Depend on CPU)

Chipset	• VT82C694X (VIA Apollo Pro 133A) • VT82C686B
Clock Generator	• ICS 9248DF-39 • 66/100/133 MHz system bus speeds (PCI 33MHz) • 75/83/112/124/140/150 MHz system bus speeds (PCI 44MHz) (reserved)
Memory	• 3 168-pin DIMM sockets. • Supports PC-100 / PC-133 SDRAM and VCM SDRAM • Supports up to 1.5GB(Max) • Supports only 3.3V SDRAM DIMM • Supports 72bit ECC type DRAM integrity mode.
I/O Control	• VT82C686B
Slots	• 1 AGP Slot Supports 4X mode & AGP 2.0 compliant • 5 PCI Slot Supports 33MHz & PCI 2.2 compliant • 1 ISA Slot • 1 AMR(Audio Modem Riser)Slot
On-Board IDE	• Supports PIO mode 3, 4 (UDMA33/ATA66) IDE & ATAPI CD-ROM • 2 IDE bus master (DMA 33/ ATA 66/100) IDE ports for up to 4 ATAPI devices
On-Board Peripherals	• 1 floppy port supports 2 FDD with 360K, 720K,1.2M, 1.44M and 2.88M bytes • 1 parallel ports supports SPP/EPP/ECP mode • 2 serial ports (COM A & COM B) • 4 USB ports • 1 IrDA connector for IR

Hardware Monitor	• CPU / System fan revolution detect
	• CPU / System temperature detect
	• System voltage detect
	• CPU overheat shutdown detect
PS/2 Connector	• PS/2 keyboard interface and PS/2 mouse interface
BIOS	• Licensed AMI BIOS, 2M bit flash ROM
On-Board Sound	• Build –in VIA sound (VIA VT82C686B)
	• Creative CT5880 sound (Optional)
Additional Features	• Supports Wake-on-LAN (WOL)
	• Supports Internal / External modem wake up
	• Includes 3 fan power connectors
	• Poly fuse for keyboard over-current protection
	• Support STR (Suspend to RAM) function
	• Support USB KB/MS Wake up From S3~S5

CPU Speed Setup

The system bus speed is selectable at 66,100,133MHz and Auto. The user can select the system bus speed **(SW1)** and change the DIP switch **(SW2)** selection to set up the CPU speed for 500MHz – 1GHz processor.

SW1:

O: ON, X: OFF

CPU	PCI CLK	1	2	3	4	5	6
Auto	33.3	X	X	X	X	O	O
66	33.3	O	O	X	X	X	X
75	37.5	O	O	O	X	X	X
83	41.6	O	O	X	O	X	X
100	33.3	O	X	X	X	X	X
112	37.3	O	X	O	X	X	X
124	31	X	X	X	O	X	X
133	33.3	X	X	X	X	X	X
140	35	X	X	O	O	X	X
150	37.5	X	X	O	X	X	X

✪ **The CPU speed must match with the frequency RATIO. It will cause system hanging up if the frequency RATIO is higher than that of CPU.**

☞**For Auto Jumper setting:**
★**Note:**
1. If you use 66, 100, 133 MHz CPU, we recommend you to set up your system speed to "Auto" value.
2. We don't recommend you to set up your system speed to 75,83,112, 124, 140,150 MHz because these frequencies are not the standard specifications for CPU, Chipset and most of the peripherals. Whether your system can run under 75,83,112, 124, 140,150 MHz properly will depend on your hardware configurations: CPU, SDRAM, Cards, etc.

Suspend To RAM Installation

A.1 Introduce STR function:

Suspend-to-RAM (STR) is a Windows 98 ACPI sleep mode function.   When recovering from STR (S3) sleep mode, the system is able, in just a few seconds, to retrieve the last "state" of the system before it went to sleep and recover to that state. The "state" is stored in memory (RAM) before the system goes to sleep. During STR sleep mode, your system uses only enough energy to maintain critical information and system functions, primarily the system state and the ability to recognize various "wake up" triggers or signals, respectively.

A.2 STR function Installation

Please use the following steps to complete the STR function installation.

Step-By-Step Setup

Step 1:

To utilize the STR function, the system must be in Windows 98 ACPI mode.

Putting Windows 98 into ACPI mode is fairly easy.

Setup with Windows 98 CD:

A.   Insert the Windows 98 CD into your CD-ROM drive, select Start, and then Run.

B.   Type (without quotes) **"D:\setup /p j"** in the window provided. Hit the enter key or click OK. 『In Windows 98 second edition version, all the bios version dated 12/01/99 or later are ACPI compatible. Just type" D:\Setup", the operating system   will be installed as ACPI mode. 』

C.   After setup completes, remove the CD, and reboot your system

(This manual assumes that your CD-ROM device drive letter is D:).

Step 2:

(If you want to use STR Function, please set jumper JP11 Closed.)
Pin No.	Definition
Open	STR Disabled (Default)
Close	STR Enabled

Step 3:

Power on the computer and as soon as memory counting starts, press <Del>. You will enter BIOS Setup. Select the item **"POWER MANAGEMENT SETUP",** then select **"ACPI Sleep Type: S3 / STR"**. Remember to save the settings by pressing "ESC" and choose the **"SAVE & EXIT SETUP"** option.

Congratulation! You have completed the installation and now can use the STR function.

A.3 How to put your system into STR mode?

There are two ways to accomplish this:

1. Choose the "Stand by" item in the "Shut Down Windows" area.

    A. Press the "Start" button and then select "Shut Down"

    B. Choose the "Stand by" item and press "OK"
2.　　Define the system "power on" button to initiate STR sleep mode:

A.　　Double click "My Computer" and then "Control Panel"

B.　　Double click the " Power Management" item.
C.   Select the "Advanced" tab and "Standby" mode in Power Buttons.
Step 4:

Restart your computer to complete setup.

Now when you want to enter STR sleep mode, just momentarily press the "Power on" button..

A.4 How to recover from the STR sleep mode?

There are five ways to "wake up" the system:

1. Press the "Power On" button.
2. Use the "Resume by Alarm" function.
3. Use the "Modem Ring On" function.
4. Use the "Wake On LAN" function.
5. Use the "USB Device Wake up" function.

A.5 Notices:

1.   In order for STR to function properly, several hardware and software requirements must be satisfied:

    A.   Your ATX power supply must comply with the ATX 2.01 specification (provide more than 720 mA 5V Stand-By current).

    B.   Your SDRAM must be PC-100 compliant.

2.   Jumper JP5 is provided to connect to the STR LED in your system chassis.   [Your chassis may not provide this feature.]   The STR LED will be illuminated when your system is in STR sleep mode.

Memory Installation

The motherboard has 3 dual inline memory module (DIMM) sockets. The BIOS will automatically detects memory type and size. To install the memory module, just push it vertically into the DIMM Slot .The DIMM module can only fit in one direction due to the two notch. Memory size can vary between sockets.

Install memory in any combination table:

DIMM	168-pin SDRAM DIMM Modules	
DIMM1	Supports 16 / 32 / 64 / 128 / 256 / 512MB	X 1 pcs
DIMM2	Supports 16 / 32 / 64 / 128 / 256 / 512MB	X 1 pcs
DIMM3	Supports 16 / 32 / 64 / 128 / 256 / 512MB	X 1 pcs

BIOS Setup

BIOS Setup is an overview of the BIOS Setup Program. The program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM so that it retains the Setup information when the power is turned off.

ENTERING SETUP

Power ON the computer and press <Del> immediately will allow you to enter Setup. If the message disappears before you respond and you still wish to enter Setup, restart the system to try again by turning it OFF then ON or pressing the "RESET" bottom on the system case. You may also restart by simultaneously press <Ctrl> – <Alt>– <Del> keys.

GETTING HELP

Main Menu

The on-line description of the highlighted setup function is displayed at the bottom of the screen.

Status Page Setup Menu / Option Page Setup Menu

Press F1 to pop up a small help window that describes the appropriate keys to use and the possible selections for the highlighted item. To exit the Help Window press <Esc>.

The Main Menu

Once you enter AMI BIOS CMOS Setup Utility, the Main Menu (Figure 1) will appear on the screen. The Main Menu allows you to select from nine setup functions and two exit choices. Use arrow keys to select among the items and press <Enter> to accept or enter the sub-menu.

● **Date**

The date format is <Week>, <Month>, <Day>, <Year>.

Week	The week, from Sun to Sat, determined by the BIOS and is display-only
Month	The month, Jan. Through Dec.
Day	The day, from 1 to 31 (or the maximum allowed in the month)
Year	The year, from 1990 through 2099

● **Time**

The times format in <hour> <minute> <second>. The time is calculated base on the 24-hour military-time clock. For example, 1 p.m. is 13:00:00.

● **Primary Master, Slave / Secondary Master, Slave**

The category identifies the types of hard disk from drive C to F that has been installed in the computer. There are two types: auto type, and user definable type. User type is user-definable; Auto type which will automatically detect HDD type.

Note that the specifications of your drive must match with the drive table. The hard disk will not work properly if you enter improper information for this category.

If you select User Type, related information will be asked to enter to the following items. Enter the information directly from the keyboard and press <Enter>. Such information should be provided in the documentation form your hard disk vendor or the system manufacturer.

CYLS.	Number of cylinders
HEADS	number of heads
PRECOMP	write precomp
LANDZONE	Landing zone
SECTORS	number of sectors

If a hard disk has not been installed select NONE and press <Enter>.

● **Floppy Drive A / Floppy Drive B**

The category identifies the types of floppy disk drive A or drive B that has been installed in the computer.

None	No floppy drive installed
360K, 5.25 in.	5.25 inch PC-type standard drive; 360K byte capacity.
1.2M, 5.25 in.	5.25 inch AT-type high-density drive; 1.2M byte capacity (3.5 inch when 3 Mode is Enabled).
720K, 3.5 in.	3.5 inch double-sided drive; 720K byte capacity
1.44M, 3.5 in.	3.5 inch double-sided drive; 1.44M byte capacity.
2.88M, 3.5 in.	3.5 inch double-sided drive; 2.88M byte capacity.

- **Boot Sector Virus Protection**

   If it is set to enable, the category will flash on the screen when there is any attempt to write to the boot sector or partition table of the hard disk drive. The system will halt and the following error message will appear in the mean time. You can run anti-virus program to locate the problem.

Enabled	Activate automatically when the system boots up causing a warning message to appear when anything attempts to access the boot sector or hard disk partition table
Disabled	No warning message to appear when anything attempts to access the boot sector or hard disk partition table. **(Default Value)**

- **Memory**

   The category is display-only which is determined by POST (Power On Self Test) of the BIOS.

   ### Base Memory

   The POST of the BIOS will determine the amount of base (or conventional) memory installed in the system.

   The value of the base memory is typically 512 K for systems with 512 K memory installed on the motherboard, or 640 K for systems with 640 K or more memory installed on the motherboard.

   ### Extended Memory

   The BIOS determines how much extended memory is present during the POST.

   This is the amount of memory located above 1 MB in the CPU's memory address map.

   ### Other Memory

   This refers to the memory located in the 640 K to 1024 K address space. This is memory that can be used for different applications.

   DOS uses this area to load device drivers to keep as much base memory free for application programs. Most use for this area is Shadow RAM

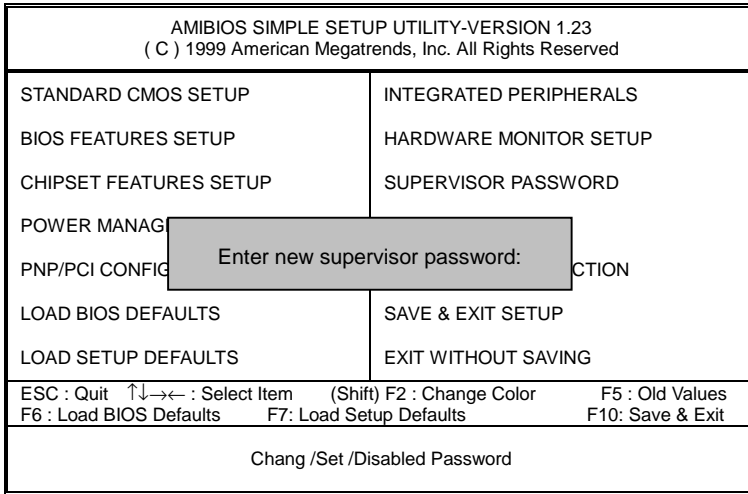

Figure 11: Password Setting

Type the password, up to eight characters, and press <Enter>. The password typed now will clear the previously entered password from CMOS memory. You will be asked to confirm the password. Type the password again and press <Enter>. You may also press <Esc> to abort the selection and not enter a password.

To disable password, just press <Enter> when you are prompted to enter password. A message "PASSWORD DISABLED" will appear to confirm the password being disabled. Once the password is disabled, the system will boot and you can enter Setup freely.

If you select "Always" at "Password Check" Option in BIOS Features Setup Menu, you will be prompted for the password every time the system is rebooted or any time you try to enter Setup Menu. If you select "Setup" at "Password Check" Option in BIOS Features Setup Menu, you will be prompted only when you try to enter Setup.

Appendix B: VIA Sound Driver
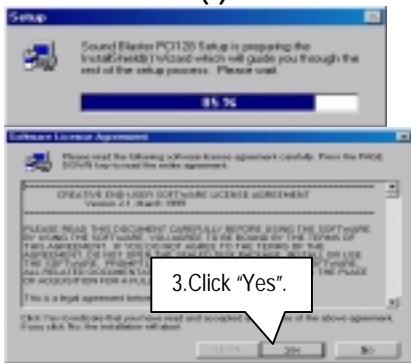

A. AC'97 Audio Driver:

Insert the support CD that came with your motherboard into your CD-ROM driver or double –click the CD driver icon in My Computer to bring up the screen.

Audio

1.Click "AC'97 Audio Driver" item.

(1)

2.Click "Next".

(2)

3.Click "Next"

(3)

4.Click "Finish" to restart.
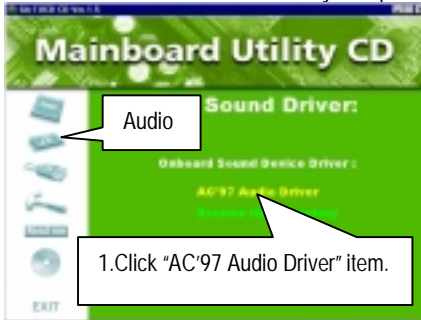

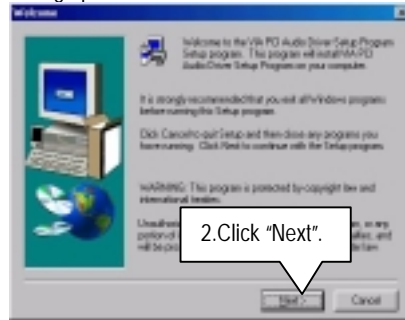

(4)

Appendix C: Creative Sound Driver Installation (Optional)

Insert the support CD that came with your motherboard into your CD-ROM driver or double –click the CD driver icon in My Computer to bring up the screen.

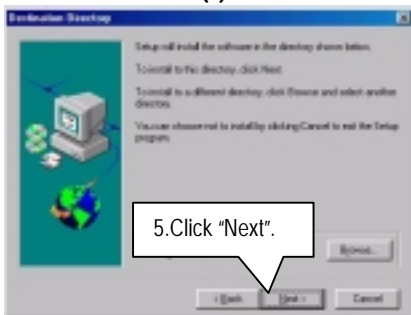

Audio

1.Click "Creative 5880 Sound Driver".

(1)

2.Click "OK".

(2)

3.Click "Yes".

(3)

Appendix D: BIOS Flash Procedure

BIOS update procedure:

✓ Please check your BIOS vendor (AMI or AWARD) on the motherboard.

✓ It is recommended you copy the AWDFlash.exe or AMIFlash.exe in driver CD
  (D:\>Utility\BIOSFlash) and the BIOS binary files into the directory you made in your hard
  disk. 【i.e:C:\>Utility\ (C:\>Utility : denotes the driver and the directory where you put the
  flash utilities and BIOS file in.)】

✓ Restart your computer into MS-DOS mode or command prompt only for Win95/98, go into
  the directory where the new BIOS file are located use the utility AWDFlash.exe or
  AMIFlash.exe to update the BIOS.

✓ Type the following command once you have enter the directory where all the files are
  located C:\utility\ AWDFlash or AMIFlash <filename of the BIOS binary file intended for
  flashing>

✓ Once the process is finished, reboot the system

♠Note: Please download the newest BIOS from our website (www.gigabyte.com.tw) or contact
your local dealer for the file.
