1 INTRODUCTION

1.1 To Different Users

First-Time DIY System Builder

Welcome to the DIY world! Building your own computer system is not as difficult as you may think. To make your first computer DIY experience successful, right from the start, we have designed the **3.1 Hardware Installation** section in a step-by-step fashion for all the first-time DIY system builders. Prior to installation, we also suggest you to read the whole manual carefully to gain a complete understanding of your new Shuttle AB52 mainboard.

Experienced DIY User

Congratulate on your purchase of the Shuttle AB52 mainboard. You will find that installing your new Shuttle AB52 mainboard is just easy. Bundled with an array of onboard functions, the highly-integrated AB52 mainboard provides you with a total solution to build the most stable and reliable system. Refer to sections **3.2 Jumper Settings** and **Chapter 4 Drivers/Software Utilities** to find out how to get the best out of your new mainboard. **Chapter 5 BIOS Setup** also contains the relevant information on how to tune up your system to achieve higher performance.

System Integrator

You have wisely chosen Shuttle AB52 to construct your system. Shuttle AB52 incorporates all the state-of-the-art technology of the Brookdale chipset from Intel. It integrates the most advanced functions you can find to date in a compact ATX board.

1.2 Item Checklist

Check all items with you AB52 mainboard to make sure nothing is missing.
The complete package should include:

- * One piece of Shuttle AB52 Mainboard

- * One piece of ATA **100/66** Ribbon Cable

- * One piece of Floppy Ribbon Cable

- * One piece of twin ports USB Cable (**optional**)

- * AB52 User's Manual

- * One piece of Bundled CD-ROM with containing:
 - AB52 user's manual saved in PDF format
 - Intel Chipset System Driver
 - Onboard Audio controller driver
 - IDE driver
 - Award Flashing Utility

2 FEATURES

AB52 mainboard is carefully designed for the demanding PC user who wants high performance and maximum intelligent features in a compact package.

2.1 Specifications

* CPU Support

Intel Pentium 4/Celeron, 478-pin processors with 400 MHz FSB.

* Chipset

Features Intel i82845 (MCH) N.B. and Intel 82801BA (ICH2) S.B..

* CPU FSB Configuration

Soft-configuration FSB (The FSB speed is software configurable from 100MHz to 160MHz).

* On Board Channel Hardware Audio Controller

The AC' 97 Audio codec is compliant with the AC'97 2.2 specification, and supports 18-bit ADC(Analog Digital Converter) and DAC(Digital Analog Converter) resolution as well as 18-bit stereo full-duplex codec with independent and variable sampling rates.

* Versatile Memory Support

This mainboard can accommodate 2.5V DDR SDRAM. It accommodates two unbuffered 2.5V 184 pin slots with total maximum capacity of 2GB.

* Expansion Slots

Provides one 32-bit AGP slot which supports 4X AGP devices.(support 1.5V only)

Provides six 32-bit PCI slots.

* 4 USB Interface Onboard

2 X USB connectors on back-panel and one sets of dual USB ports headers on mid-board.

* I/O Interface

Provides a variety of I/O interfaces:

➤ 1 X Floppy interface for 3.5-inch FDD with 720KB, 1.44MB, or 2.88MB format or for 5.25-inch FDD with 360K or 1.2MB format.

➤ 1 X PS/2 mouse connector.

-
- 1 X PS/2 Keyboard connector.
 - 4 X USB ports.
 - 1 X DB9 Serial connectors 16550 UART compatible.
 - 1 X DB25 Parallel port supports Standard Parallel Port and Bi-directional (SPP), Enhanced Parallel Port (EPP), and Extended Capabilities Port (ECP) data transmission schemes.
 - 1 X Line-Out port.
 - 1 X Line-In port.
 - 1 X Mic-In port.
 - 1 X MIDI/GAME port.

* **PCI Bus Master IDE Controller Onboard**

Two Ultra DMA **100/66** Bus Master Dual-channel IDE ports provide support to a maximum of four IDE devices (one Master and one Slave per channel). The IDE Bus implements data transfer speeds of up to **100/66** MB/sec and also supports Enhanced PIO Modes.

80-pin Cable Backward Compatible Legacy ATAPI Devices, ATAPI IDE CD-ROM, CD-R, CD-RW, and LS-120 Supports.

* **ATX Power Supply Connector**

ATX power supply unit can connected to the onboard 20-pin Pentium 4 standard ATX power connectors, supporting Suspend and Soft-On/Off by dual-function power button.

* **System BIOS**

Provides licensed Award BIOS V6.0 PG on Intel Firmware Hub 2Mb Flash core and supports Green PC, Desktop Management Interface (DMI).

* **ATX Form Factor**

System board conforms to ATX specification.

Board dimension: 305mm X 220mm.

* **Advanced Features**

- **Low EMI** - Built in spread spectrum and automatic clock shut-off of unused PCI/DDR-SDRAMS slots to reduce EMI.
- **Dual Function Power Button** - The system can be in one of two states, one is Suspend mode and the other is Soft-Off mode. Pushing the power button for less than 4 seconds places the system into Suspend mode. When the power button is pressed for longer than 4 seconds, the system enters Soft-Off mode.

-
- **Modem Ring Power-On** - The system can be powered on automatically by the activation of modem ringing.
 - **CPU Clock Setting** - This item allows users to adjust CPU Host Clock in BIOS.
 - **CPU Multiplier Setting** - This item allows users to adjust CPU Multiplier in BIOS.
 - **CPU Vcore Setting** - This item allows users to adjust CPU Vcore in BIOS.

*** Intelligent Features**

- **Voltage Monitoring** - Monitors various voltages of key elements, such as the CPU, and other critical system voltage levels to ensure stable current passing through mainboard components. System voltages include CPU Vcore, +3.3v, +5V, +12V, Battery on system etc.
- **Fan Status Monitoring** - To prevent CPU from overheating, the CPU fan is monitored for RPM and failure. (CPU Cooling FAN with RPM sensor is required.)
- **Temperature Monitoring** - This item allows users to make sure whether the CPU or system runs in a suitable temperature.

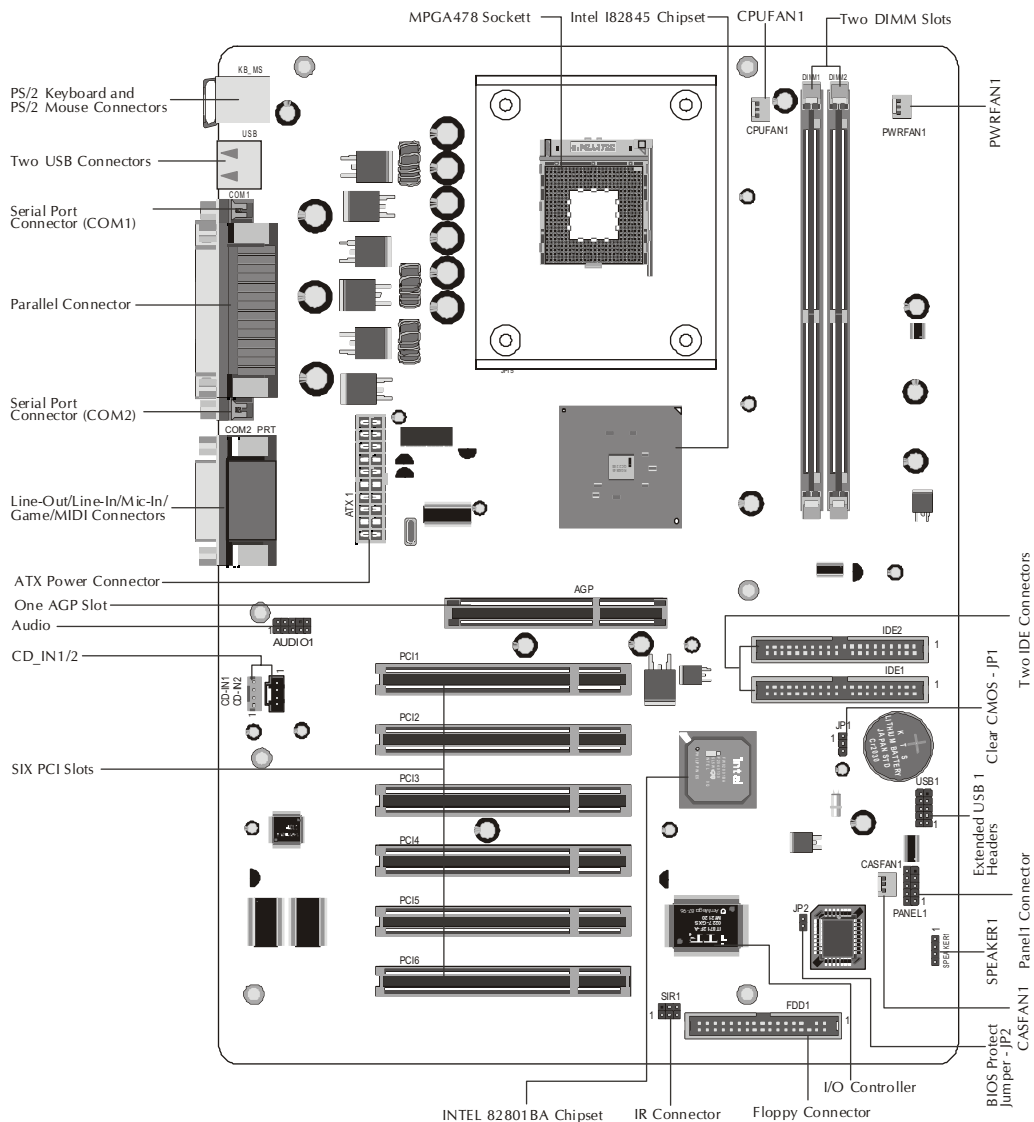

3 HARDWARE INSTALLATION

Before removing or installing any of these devices including CPU, DIMMs, Add-On Cards, Cables, please make sure to unplug the onboard power connector.

This section outlines how to install and configure your mainboard. Refer to the following mainboard layout to help you to identify various jumpers, connectors, slots, and ports. Then follow these steps designed to guide you through a quick and correct installation of your system.

3.1 Step-by-Step Installation

Accessories Of AB52

Step 1

CPU Installation:

This mainboard supports Intel Pentium 4/Celeron , Socket 478 series CPU. Please follow the step as below to finish CPU installation.

Be careful of CPU orientation when you plug it into CPU socket.

1. Pull up the CPU socket lever and up to 90-degree angle.

2. Locate Pin 1 in the socket and look for a black dot or cut edge on the CPU upper interface. Match Pin 1 and cut edge, then insert the CPU into the socket.

-
3. Press down the CPU socket lever and finish CPU installation.

Note: If you do not match the CPU socket Pin 1 and CPU cut edge well, it may damage the CPU.

4. The Intel Pentium 4/Celeron processor requires a set of heatsink/fan to ensure proper cooling of the processor. If heatsink/fan have not been already bundled with your CPU, you must purchase the heatsink/fan separately and have it installed. Plug the cable through the heatsink/fan in the CPU fan power connector located nearby. Note that there are several types of CPU fan connectors. Normally, if your mainboard supports the hardware monitoring function, a 3-pin fan power connector should allow your system to detect the CPU fan's speed. The CPU fan can also run with a 2-pin fan power connector, however, detection of CPU fan's speed is not supported. Another type of CPU fan may feature a large 4-pin fan power connector, which does not support CPU fan's speed detection and must be directly connected to the system's power supply unit.

Step 2.

Set Jumpers

This mainboard is jumperless! The default jumper settings have been set for the common usage standard of this mainboard. Therefore, you do not need to reset the jumpers unless you require special adjustments as any of the following cases:

1. Clear CMOS
2. BIOS Protect

For first-time DIY system builders, we recommend that you do not change the default jumper settings if you are not totally familiar with the mainboard configuration procedures. The factory-set default settings are tuned for optimum system performance. For the advanced users who wish to customize their system, section **3.2 Jumper Settings** will provide detailed information on how to configure your mainboard manually.

Step 3

Install DDR SDRAM System Memory

To install memory, insert DDR-SDRAM memory module(s) in any one or two DIMM banks. Note that SDRAM modules are directional and will not go in the DIMM banks if they are not properly oriented. After the module is fully inserted into the DIMM bank, lift the clips of both sides of the DIMM bank to lock the module in place.

Step 4

Install Internal Peripherals in System Case

Before you install and connect the mainboard into your system case, we recommend that you first assemble all the internal peripheral devices into the computer housing, including but not limited to the hard disk drive (IDE/HDD), floppy disk drive (FDD), CD-ROM drive, and ATX power supply unit. This will greatly facilitate in making the connections to the mainboard described below.

To install IDE & FDD drives, follow this procedure:

1. Set the required jumpers on each device according to the instructions provided by the manufacturer. (IDE devices, HDD, and CD-ROM, have to set jumpers to Master or Slave mode depending on whether you install more than one device of each kind.)
2. Connect IDE cable and FDD cable on the back-panel of the internal peripheral devices to the corresponding headers on board. Note that the cable should be oriented with its colored stripe (usually red or magenta) connected to pin#1 both on the mainboard IDE or FDD connector and on the device as well.
3. Connect an available power cable from your system power supply unit to the back-panel of each peripheral device. Note that the power cable is directional and cannot fit in if not properly positioned.

Step 5

Mount the Mainboard on the Computer Chassis

1. You may find that there are a lot of different mounting hole positions both on your computer chassis and on the mainboard. To choose correct mounting holes, the key point is to keep the back-panel of the mainboard in a close fit with your system case, as shown below.

2. After deciding on the proper mounting holes, position the studs between the frame of the chassis and the mainboard. The studs are used to fix the mainboard and to keep a certain distance between the system chassis and the mainboard, in order to avoid any electrical shorts between the board and the metal frame of the chassis. (If your computer case is already equipped with mounting studs, you will need to tighten screws to attach the mainboard.)

Note: In most computer housings, you will be able to find 4 or more attachment points to install mounting studs and then fix the mainboard. If there aren't enough matching holes, then make sure to install at least 4 mounting studs to ensure proper attachment of the mainboard.

Step 6

Connect Front Panel Switches/LEDs/USB/Speaker/Audio

You can find there are several different cables already existing in the system case and originating from the computer's front-panel devices (HDD LED, Power LED, Reset Switch, PC Speaker, or USB devices etc.) These cables serve to connect the front-panel switches, LEDs, and USB connectors to the mainboard's front-panel connectors group, as shown below.

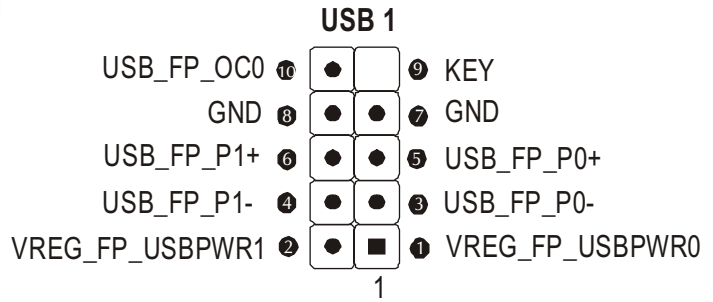

PANEL1

1. HD_LED_P
2. FP PWR/SLP (MSG LED)
3. HD_LED_N
4. GND (MSG GND)
5. RST_SW_N
6. PWR_SW_P
7. RST_SW_P
8. PWR_SW_N
9. RSVD
10. NC

Extended USB Header

1. VREG_FP_USBPWR0
2. VREG_FP_USBPWR1
3. USB_FP_P0-
4. USB_FP_P1-
5. USB_FP_P0+
6. USB_FP_P1+
7. GND
8. GNC
9. KEY
10. USB_FP_OC0

SPEAKER1

1. SIGNAL
2. KEY
3. Ground
4. VCC

AUDIO1

1. AUD_MIC
2. AUD_GND
3. AUD_MIC_BIAS
4. AUD_VCC
5. AUD_FPOUT_R
6. AUD_RET_R
7. HP_ON
8. KEY
9. AUD_FPOUT_L
10. AUD_RET_L

Step 7

Connect IDE and Floppy Disk Drives

1. IDE cable connector

2. Floppy cable connector

Step 8

Connect Other Internal Peripherals

1. CD-IN connectors

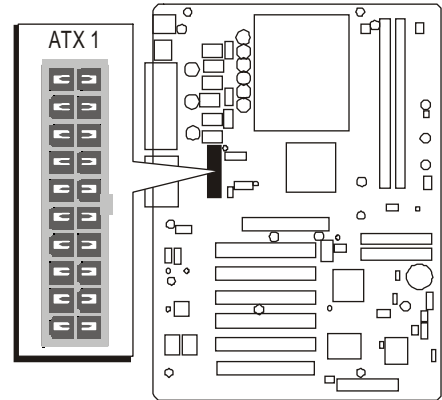

2. IR header

Step 9

Connect the Power Supply

1. System power connector

Step 10

Install Add-on Cards in Expansion Slots

1. Accelerated Graphics Port (AGP) Card

2. PCI Card

Step 11

Connect External Peripherals to Back-Panel

You are now ready to put the computer case back together and get on to the external peripherals connections to your system's back-panel.

1. PS/2 Mouse and PS/2 Keyboard

2. USB Ports

3. COM Ports

4. Parallel Port

5. MIDI/GAME Port

6. Audio Line-Out /Line-In/Mic-In Ports

Step 12

First Time System Boot Up

To assure the completeness and correctness of your system installation, you may check the above installation steps once again before you boot up your system for the first time.

1. Insert a bootable system floppy disk (DOS 6.2x, Windows 95/98/NT, or others) which contains FDISK and FORMAT utilities into the FDD.
2. Turn on the system power.
3. First, you must use the FDISK utility to create a primary partition of the hard disk. You can also add an extended partition if your primary partition does not use all of the available hard disk space. If you choose to add an extended partition, you will have to create one or more logical partitions to occupy all the space available to the extended partition. The FDISK utility will assign a drive letter (i.e., C:, D:, E:,...) to each partition which will be shown in the FDISK program. After FDISK procedure, reboot your system by using the same system floppy disk.

Note: DOS 6.2x and Windows 95A can only support up to 2.1GB of HDD partition. If you use the FDISK utility with one of the operating systems mentioned above, you can only install your HDD into partitions no larger than 2.1GB each.

4. Now, use the FORMAT utility to format all the partitions you've created. When formatting the primary partition (C:), make sure to use the `FORMAT C: /S` command.

Note: `FORMAT C: /S` can transfer all the necessary system files into the primary partition of your hard disk. Then, your HDD will become a bootable drive.

5. Install all the necessary drivers for CD-ROM, Mouse, etc.
6. Setup the complete operating system according to your OS installation guide.

Step 13

Install Drivers & Software Components

Please note that all the system utilities and drivers are designed for Win 9x/2000/ME/NT operating systems only. Make sure your operating system is already installed before running the drivers installation CD-ROM programs.

1. Insert the AB52 bundled CD-ROM into your CD-ROM drive. The auto-run program will display the drivers main installation window on screen.
2. Select the "Install Mainboard Software" bar to run into sub-menu.
3. Choose "Install Intel Chipset Driver" and complete it.
4. Choose "Install Intel Ultra ATA Driver" and complete it.
5. Choose "Install Audio Driver" and complete it.
6. Return to the main installation window and exit from the auto-run drivers installation program.

3.2 Jumper Settings

Several hardware settings are made through the use of mini jumpers to connect jumper pins on the mainboard. Pin #1 could be located at any corner of each jumper, you just find the location with a white right angle which stands for pin 1#. There are several types of pin 1# shown as below:

3-pin and multi (> 3) pin jumpers shown as following:

Pin #1 to the left:

Pin #1 on the top:

Pin #1 to the right:

Pin #1 on the bottom:

Jumpers with two pins are shown as  for Close [On] or  for Open [Off]. To Short jumper pins, simply place a plastic mini jumpers over the desired pair of pins.

Caution!

1. Do not remove the mainboard from its antistatic protective packaging until you are ready to install it.
2. Carefully hold the mainboard by its edges and avoid touching its components. When putting the mainboard down, place it on top of its original packaging film, on an even surface, and components side up.
3. Wear an antistatic wrist strap or take other suitable measures to prevent electrostatic discharge (ESD) whenever handling this equipment.

Jumpers & Connectors Guide

Use the mainboard layout on page 10 to locate CPU socket, memory banks, expansion slots, jumpers and connectors on the mainboard during the installation. The following list will help you to identify jumpers, slots, and connectors along with their assigned functions:

CPU/Memory/Expansion Slots

- | | |
|-----------|--|
| Socket478 | : CPU Socket for Pentium 4/Celeron processors |
| DIMM1/2 | : Two DIMM Slots for 128, 256, 512 MB, and 1GB of 2.5V DDR SDRAM
(The total installed memory does not exceed 2GB) |
| AGP | : One 4 X AGP (Accelerated Graphics Port) Slot |
| PCI | : Six 32-bit PCI Expansion Slots |

Jumpers

- A1** JP1 : Clear CMOS setting
- A2** JP2 : BIOS flash protect jumper

Back Panel Connectors

- B1** KB : PS/2 keyboard port
- B1** MS : PS/2 mouse port
- B2** USB : 2 USB (Universal Serial Bus) ports
- B3** COM1/2 : Serial ports 1/2 (DB9 male)
- B4** LPT1 : Parallel port (DB25 female)
- B5** LINE_OUT : Line-Out (Front-Out) port
- B6** LINE_IN : Line-In (Rear-Out) port
- B7** MIC_IN : Mic-In port
- B8** GAME/MIDI : GAME/MIDI Port

Front Panel Connectors

- C1** PANEL1 : PANEL connector
- C2** SPEAKER1 : Internal speaker in housing
- C3** USB1 : Extended USB header

Internal Peripherals Connectors

- D1** FDD1 : Floppy disk drive interface
- D1** IDE1 : IDE primary interface (Dual-channel)
- D1** IDE2 : IDE secondary interface (Dual-channel)

Other Connectors

- E1** ATX1 : ATX power connector
- E2** FAN1 : CPU fan connector
- E2** FAN2 : Chipset fan connector
- E2** FAN3 : System fan connector
- E3** SIR1 : IR header
- E4** CD_IN1/2 : CD_IN connectors
- E5** AUDIO1 : Audio headers

Jumpers

A1 Clear CMOS Setting (JP1)

JP1 is used to clear CMOS data. Clearing CMOS will result in the permanently erasing previous system configuration settings and the restoring original (factory-set) system settings.

Pin 1-2 (Default)

Pin 2-3 (Clear CMOS)

- Step 1.** Turn off the system power (PC-> Off).
- Step 2.** Remove ATX Power cable from ATX Power connector.
- Step 3.** Remove jumper cap from JP1 pins 1-2.
- Step 4.** Place the jumper cap on JP1 pin 2-3 for a few seconds.
- Step 5.** Return the jumper cap to pin 1-2.
- Step 6.** Plug ATX Power cable into ATX Power connector.
- Step 7.** Turn on the system power (PC-> On).

A2 BIOS Flash Protection Setting (JP2)

JP2 is used to protect the BIOS from being unintentionally flashed. Short this jumper for protection and open this jumper when you want to flash the BIOS.

Open: Flash enabled

Short: Flash protect

☛ Back-Panel Connectors

B1 PS/2 Keyboard & PS/2 Mouse Connectors

Two 6-pin female PS/2 keyboard & Mouse connectors are located at the rear panel of the mainboard. Depending on the computer housing you use (desktop or tower), the PS/2 Mouse connector is situated at the top of the PS/2 Keyboard connector when the mainboard is laid into a desktop, as opposed to a tower where the PS/2 Mouse connector is located at the right of the PS/2 Keyboard's. Plug the PS/2 keyboard and mouse jacks into their corresponding connectors.

B2 USB1/USB2 Port Connectors

This mainboard offers 2 USB ports on back panel. Plug each USB device jack into an available USB1/USB2 connector.

B3 COM1/2 Port Connectors

This mainboard can accommodate two serial device on COM1/2. Attach a serial device cable to the DB9 serial port COM1/2 at the back panel of your computer.

B4 Parallel Port Connector

One DB25 female parallel connector is located at the rear panel of the mainboard. Plug the connection cable from your parallel device (printer, scanner, etc.) into this connector.

B5 Line-Out Port Connector

Line-Out is a stereo output port through which the combined signal of all internal and external audio sources on the board is output. It can be connected to 1/8-inch TRS stereo headphones or to amplified speakers

B6 Line-In Port Connector

Line-In is a stereo line-level input port that accepts a 1/8-inch TRS stereo plug. It can be used as a source for digital sound recording, a source to be mixed with the output, or both.

B7 Mic-In Port Connector

Mic-In is a 1/8-inch jack that provides a mono input. It can use a dynamic mono or stereo microphone with a resistance of not more than 600 Ohms.

B8 MIDI/GAME Port Connector

The MIDI/GAME port is a 15-pin female connector. This port can be connected to any IBM PC compatible game with a 15-pin D-sub connector.

MIDI Instrument Connection

You will need a MIDI adapter to connect a MIDI compatible instrument to the sound card. The MIDI adapter can in turn be connected to the Joystick/MIDI port. You will also need the MIDI sequencing software to run MIDI instruments with your computer etc. into this connector.

☛ Front-Panel Connectors

Ⓜ Panel Connector (PANEL1)

The front panel connector (PANEL1) provides a standard set of switch and LED connectors commonly found on ATX or micro-ATX cases. Refer to the table below for information.

PANEL 1

1. HD_LED_P (Hard disk LED pull up to +5V)
2. FP PWR/SLP (MSG LED pull up to +5V)
3. HD_LED_N (Hard disk active LED)
4. GND (Ground)
5. RST_SW_N (Reset Switch low reference pull down to GND)
6. PWR_SW_P (Power Switch high reference pull up to +5V)
7. RST_SW_P (Reset Switch high reference pull up to +5V)
8. PWR_SW_N (Power Switch high reference pull down to GND)
9. RSVD (Reserved)
10. NC (No pin)

② Speaker Connector (SPEAKER1)

Attach the PC speaker cable from the case to the 4-pin speaker connector (SPEAKER).

SPEAKER 1

③ Extended USB Header (USB1)

The headers are used to connect the cable attached to USB connectors which are mounted on front panel or back panel. But the USB cable is optional at the time of purchase.

USB 1

Pins Assignment:

- | | |
|---------------------|---------------------|
| 1 = VREG_FP_USBPWR0 | 2 = VREG_FP_USBPWR1 |
| 3 = USB_FP_P0- | 4 = USB_FP_P1- |
| 5 = USB_FP_P0+ | 6 = USB_FP_P1+ |
| 7 = GND | 8 = GND |
| 9 = KEY | 10 = USB_FP_OC0 |

☛ **Internal Peripherals Connectors**

📁 **Enhanced IDE and Floppy Connectors**

The mainboard features two 40-pin dual-channel IDE device connectors (IDE1/IDE2) providing support for up to four IDE devices, such as CD-ROM and Hard Disk Drives (H.D.D.).

This mainboard also includes one 34-pin floppy disk controller (FDD1) to accommodate the Floppy Disk Drive (FDD). Moreover, this mainboard comes with one 80-pin ATA **100/66** ribbon cable to connect to IDE (RAID) H.D.D. and one 34-pin ribbon cable for F.D.D. connection.

Important: Ribbon cables are directional, therefore, make sure to always connect with the red cable.

☞ Other Connectors

③ ATX Power Supply Connector (ATX1)

This motherboard uses 20-pin Pentium 4 standard ATX power header, CN7 and comes with another two headers.

Please make sure you plug in the right direction.

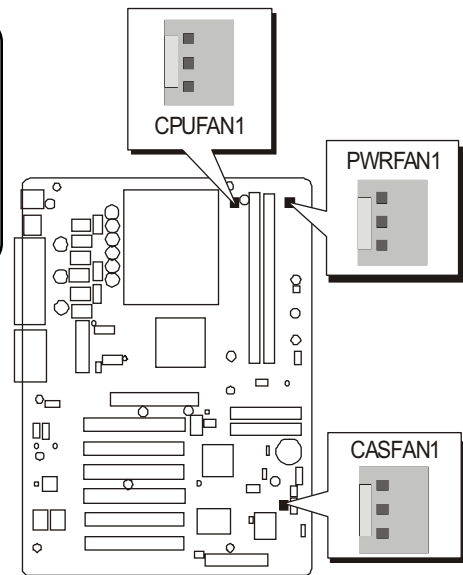

- Note 1:** The ATX power connector is directional and will not go in unless the guides match perfectly making sure that pin#1 is properly positioned.
- Note 2:** Make sure the latch of the ATX power connector clicks into place to ensure a solid attachment.
- Note 3:** Your ATX power supply must be supplied to ACPI +5V standby power and at least 720mA compatible.
- Note 4:** Make sure your power supply have enough power for higher speed processor installed.

② CPU, CAS, and PWR Fan connectors (CPUFAN1/CASFAN1/PWRFAN1)

The mainboard provides four onboard 12V cooling fan power connectors to support CPU(CPUFAN1) , CAS(CASFAN1) and PWR(PWRFAN1) cooling fans.

Note:

Both cable wiring and type of plug may vary , which depends on the fan maker. Keep in mind that the red wire should always be connected to the + 12V header and the black wire to the ground (GND) header.

③ IR Header (SIR1)

If you have an Infrared device, this mainboard can implement IR transfer function. To enable the IR transfer function, follow these steps:

Pins Assignment:

- 1 = Not assigned
- 2 = KEY
- 3 = + 5V
- 4 = GND
- 5 = IRTX
- 6 = IRRX

Note: Before connect your IR device, please be sure each IR on board pin allocation is matchable with the pin of the IR device. Otherwise, incorrect IR connection may do damage to your IR device.

Step 1. Attach the 6-pin infrared device cable to SIR1.
(Refer to the above diagram for IR pin assignment.)

Step 2. This mainboard support IrDA, or Normal transfer modes.

E4 CD_IN Connectors (CD_IN1/2)

Port CD_IN1/2 is used to attach an audio connector cable from the CD-ROM drive.

E5 Audio Connector (Audio1)

This header allows the user to install auxiliary front-oriented microphone and line-out ports for easier access.

Pin Assignments:

1 = AUD_MIC	2 = AUD_GND
3 = AUD_MIC_BIAS	4 = AUD_VCC
5 = AUD_FPOUT_R	6 = AUD_RET_R
7 = HP_ON	8 = KEY
9 = AUD_FPOUT_L	10 = AUD_RET_L

Two mini jumpers must be set on pin 5-6 and pin 9-10, when this header is not used.

3.3 System Memory Configuration

The AB52 mainboard has two 184-pin DIMM banks that allow you to install from 128MB up to 1GB of system memory.

Each **184-pin** DIMM (Dual In-line Memory Module) bank can accommodate, 128MB, 256MB, 512MB, and 1GB of PC1600/PC2100 compliant 2.5V single or double side unbuffered with or without ECC DDR SDRAM modules. DIMM slots are arranged in two banks, each memory bank made of one bank and providing a 64-bit wide data path.

1. Install Memory:

Install memory in any or all of the banks. The combination shown as follows.

DIMM Socket	Memory Modules	Module Quantity
DIMM 1	128MB, 256MB, 512MB, and 1GB, 184-pin 2.5V DDR SDRAM DIMM	x 1
DIMM 2	128MB, 256MB, 512MB, and 1GB, 184-pin 2.5V DDR SDRAM DIMM	x 1

Maximum installed memory is 2GB.

Note: You do not need to set any jumper to configure memory since the BIOS utility can detect the system memory automatically. You can check the total system memory value in the BIOS Standard CMOS Setup menu.

2. Upgrade Memory:

You can easily upgrade the system memory by inserting additional DDR SDRAM modules in available DIMM banks. The total system memory is calculated by simply adding up the memory in all DIMM banks. After upgrade, the new system memory value will automatically be computed and displayed in the field "Standard CMOS Setup" of BIOS setup program.

4 SOFTWARE UTILITY

4.1 Mainboard CD Overview

Note: The CD contents attached in AB52 mainboard are subject to change without notice.

To start your mainboard CD disc, just insert it into your CD-ROM drive and the CD AutoRun screen should appear. If the AutoRun screen does not appear, double click or run D:\Autorun.exe (assuming that your CD-ROM drive is drive D:)

Navigation Bar Description:

- ☞ **Install Mainboard AB52 Software** - Installing Intel chipset, Ultra ATA and audio drivers.
- ☞ **Manual** - AB52 Series mainboard user's manual in PDF format.
- ☞ **Link to Shuttle Homepage** - Link to shuttle website homepage.
- ☞ **Browse this CD** - Allows you to see contents of this CD.
- ☞ **Quit** - Close this CD.

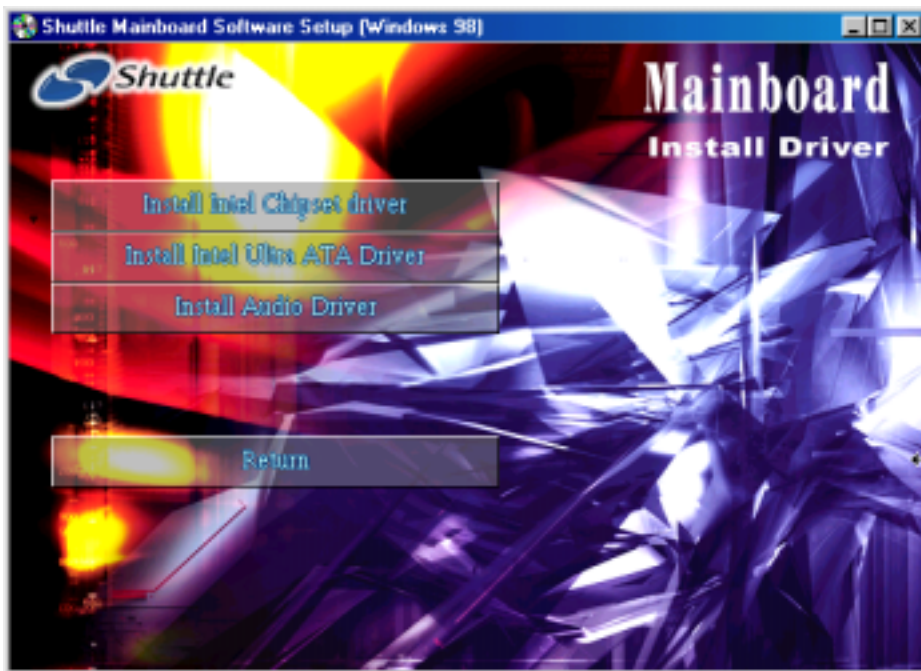

4.2 Install Mainboard Software

Insert the attached CD into your CD-ROM drive and the CD AutoRun screen should appear. If the AutoRun screen does not appear, double click on Autorun icon in **My Computer** to bring up **Shuttle Mainboard Software Setup** screen.

Select using your pointing device (e.g. mouse) on the "**Install Mainboard AB52 Software**" bar to run into sub-menu.

The **Mainboard AB52 Software** include:

- [4.2.A] Install Intel Chipset Driver
- [4.2.B] Install Intel Ultra ATA Driver
- [4.2.C] Install Audio Driver

4.2.A Install Chipset System Driver

Select using your pointing device (e.g. mouse) on the "Install Intel Chipset Driver" bar to install chipset system driver.

Once you made your selection, a Setup window run the installation automatically.

When the copying files is done, make sure you **reboot** the system to take the installation effect.

4.2.B Install IDE Driver

Select using your pointing device (e.g. mouse) on the “Install Intel Ultra ATA Driver” bar to install Ultra ATA IDE driver.

Once you made your selection, a Setup window run the installation automatically.

When the copying files is done, make sure you **reboot** the system to take the installation effect.

4.2.C Install Audio Driver

Select using your pointing device (e.g. mouse) on the "Install Audio Driver" bar to install audio driver.

Once you made your selection, a Setup window run the installation automatically.

When the copying files is done, make sure you **reboot** the system to take the installation effect.

4.3 View the User's Manual

Insert the attached CD into your CD-ROM drive and the CD AutoRun screen should appear. If the AutoRun screen does not appear, double click on AutoRun icon in **My Computer** to bring up **Shuttle Mainboard Software Setup** screen.

Select using your pointing device (e.g. mouse) on the **"Manual"** bar.

Then **Online Information** windows will appear on your screen. Click on the **"Install Acrobat Reader"** bar if you need to install acrobe reader.

Then click on **"AB52 Manual"** bar to view user's manual.

5 BIOS SETUP

AB52 BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This information is stored in battery-backed RAM so that it retains the Setup information even if the system power is turned off.

The system BIOS is managing and executing a variety of hardware related functions in the system, including:

System date and time

Hardware execution sequence

Power management functions

Allocation of system resources

5.1 Enter the BIOS

To enter the BIOS (Basic Input / Output System) utility, follow these steps:

- Step 1.** Power on the computer, and the system will perform its POST (Power-On Self Test) routine checks.
- Step 2.** Press key immediately, or at the following message:
Press DEL to enter SETUP, or simultaneously press <Ctrl>, <Alt>, <Esc> keys

Note 1. If you miss trains of words meationed in step2 (the message disappears before you can respond) and you still wish to enter BIOS Setup, restart the system and try again by turning the computer OFF and ON again or by pressing the <RESET> switch located at the computer's front-panel. You may also reboot by simultaneously pressing the <Ctrl>, <Alt>, keys.

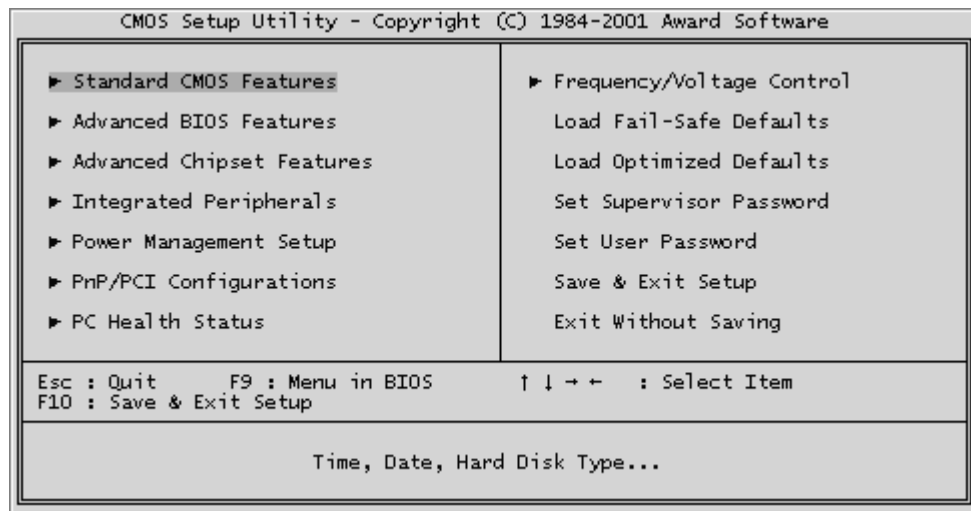

Note 2. If you do not press the keys in time and system does not boot, the screen will prompt an error message, and you will be given the following options:

“Press F1 to Continue, DEL to Enter Setup”

- Step 3.** As you enter the BIOS program, the CMOS Setup Utility will prompt you the Main Menu, as shown in the next section.

5.2 The Main Menu

Once you enter the AwardBIOS(tm) CMOS Setup Utility, the Main Menu will appear on the screen. The Main Menu allows you to select from several setup functions and two exit choices. Use the arrow keys to select among the items and press <Enter> to accept and enter the sub-menu.

Note that a brief description of each highlighted selection appears at the bottom of the screen.

Setup Items

The main menu includes the following main setup categories. Recall that some systems may not include all entries.

Standard CMOS Features

Use this menu for basic system configuration.

Advanced BIOS Features

Use this menu to set the Advanced Features available on your system.

Advanced Chipset Features

Use this menu to change the values in the chipset registers and optimize your system's performance.

Integrated Peripherals

Use this menu to specify your settings for integrated peripherals.

Power Management Setup

Use this menu to specify your settings for power management.

PnP / PCI Configurations

This entry appears if your system supports PnP / PCI.

PC Health Status

This entry shows the current system temperature, Voltage, and FAN speed.

Frequency/Voltage Control

Use this menu to specify your settings for frequency/voltage control.

Load Fail-Safe Defaults

Use this menu to load the BIOS default values for the minimal/stable performance of your system to operate.

Load Optimized Defaults

Use this menu to load the BIOS default values that are factory-set for optimal performance system operation. While Award has designed the custom BIOS to maximize performance, the factory has the right to change these defaults to meet users' needs.

Supervisor / User Password

Use this menu to change, set, or disable supervisor/user password. It allows you to limit access to the system and Setup, or only to Setup.

Save & Exit Setup

Save CMOS value changes in CMOS and exit from setup.

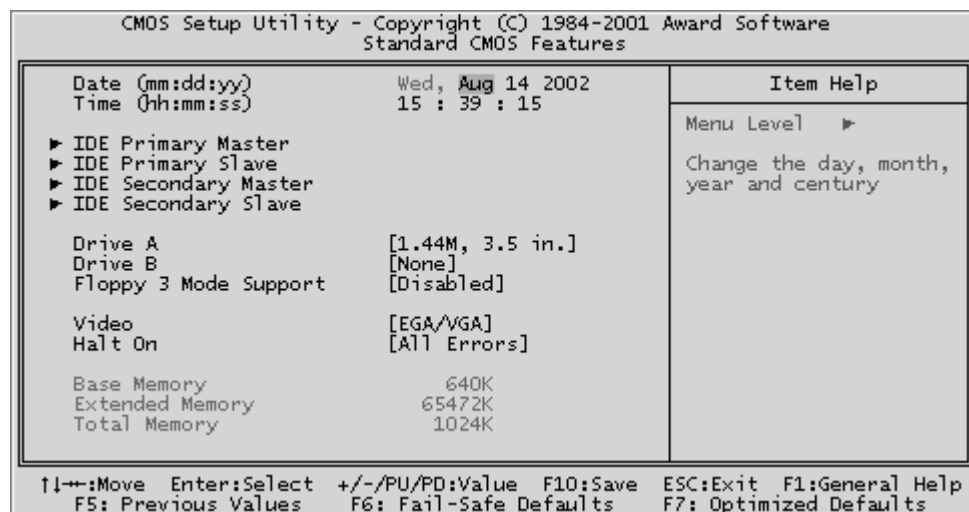

Exit Without Saving

Abandon all CMOS value changes and exit from setup.

Standard CMOS Features

The items in Standard CMOS Setup Menu are divided into 10 categories. Each category includes no, one or more than one setup items. Use the arrow keys to highlight the item and then use the <PgUp> or <PgDn> keys to select the value you want in each item.

Date

<Month> <DD> <YYYY>

Set the system date. Note that the 'Day' automatically changes when you set the date.

Time

<HH : MM : SS>

The time is converted based on the 24-hour military-time clock. For example, 5 p.m. is 17:00:00.

IDE Primary Master

Options are in its sub-menu.

Press <Enter> to enter the sub-menu of detailed options.

IDE Primary Slave

Options are in its sub-menu.

Press <Enter> to enter the sub-menu of detailed options.

IDE Secondary Master

Options are in its sub-menu.

Press <Enter> to enter the sub-menu of detailed options.

IDE Secondary Slave

Options are in its sub menu.

Press <Enter> to enter the sub-menu of detailed options.

Drive A/Drive B

Select the type of floppy disk drive installed in your system.

- The choice: None, 360K, 5.25 in, 1.2M, 5.25 in, 720K, 3.5 in, 1.44M, 3.5 in, or 2.88M, 3.5 in.

Floppy 3 Mode Support

Floppy 3 mode refers to a 3.5-inch diskette with a capacity of 1.2MB. Floppy 3 mode is sometimes used in Japan.

- The choice: Disable, Drive A, Drive B, or Both.

Video

Select the default video device.

- The choice: EGA/VGA, CGA 40, CGA 80, or MONO.

Halt On

Select the situation in which you want the BIOS to stop the POST process and notify you.

- The choice: All Errors, No Errors, All, But Keyboard, All, But Diskette, or All, But Disk/Key.

Base Memory

Displays the amount of conventional memory detected during boot up.

- The choice: N/A.

Extended Memory

Displays the amount of extended memory detected during boot up.

- The choice: N/A.

Total Memory

Displays the total memory available in the system.

- The choice: N/A.

IDE Adapters

The IDE adapters control the hard disk drive. Use a separate sub-menu to configure each hard disk drive.

IDE HDD Auto-Detection

Press <Enter> to auto-detect HDD on this channel. If detection is successful, it fills the remaining fields on this menu.

- Press Enter

IDE Primary Master

Selecting 'manual' lets you set the remaining fields on this screen and select the type of fixed disk. "User Type" will let you select the number of cylinders, heads, etc., Note: PRECOMP = 65535 means NONE!

- The choice: None, Auto, or Manual.

Access Mode

Choose the access mode for this hard disk.

- The choice: CHS, LBA, Large, or Auto.

Capacity

Disk drive capacity (Approximated). Note that this size is usually slightly greater than the size of a formatted disk given by a disk checking program.

- Auto-Display your disk drive size.

The following options are selectable only if the 'IDE Primary Master' item is set to 'Manual'

Cylinder

Set the number of cylinders for this hard disk.

- Min = 0, Max = 65535

Head

Set the number of read/write heads.

- Min = 0, Max = 255

Precomp

Warning: Setting a value of 65535 means no hard disk.

- Min = 0, Max = 65535

Landing zone

Set the Landing zone size.

➤ Min = 0, Max = 65535

Sector

Number of sector per track.

➤ Min = 0, Max = 255

Advanced BIOS Features

This section allows you to configure your system for basic operation. You have the opportunity to select the system's default speed, boot-up sequence, keyboard operation, shadowing, and security.

Virus Warning

Allows you to choose the VIRUS Warning feature for IDE Hard Disk boot sector protection. If this function is enables and someone attempts to write data into this area, BIOS will show a warning message on screen, and an alarm beep.

Enabled Activates automatically when the system boots up, causing a warning message to appear when anything attempts to access the boot sector or hard disk partition table.

Disabled No warning message will appear when anything attempts to access the boot sector or hard disk partition table.

➤ The choice: Enabled or Disabled.

CPU L1&L2 Cache

All processors that can be installed in this mainboard use internal level1(L1) and external 2(L2) cache memory to improve performance. Leave this item at the default value for better performance.

➤ The choice: Enabled or Disabled.

Quick Power On Self Test

This item speeds up Power-On Self Test (POST) after you power on the computer. If it is set to enabled, BIOS will shorten or skip some check items during POST.

- The choice: Enabled, or Disabled.

First/Second/Third Boot Device

The BIOS attempts to load the operating system from the devices in the sequence selected in these items.

- The Choice: Floppy, LS120, HDD-0 ~ 3, SCSU, CDROM, ZIP100, USB-FDD, USB-ZIP, USB-CDROM, USB-HDD, LAN, or Disabled.

Boot Other Device

Select Your Boot Device Priority.

- The choice: Enabled or Disabled.

Swap Floppy Drive

If the system has two floppy drives, you can swap the logical drive name assignment.

- The choice: Enabled or Disabled.

Boot Up Floppy Seek

Seeks disk drives during boot-Up. Disabling speed boots up.

- The choice: Enabled or Disabled.

Boot Up NumLock Status

Selects power-on state for NumLock.

- The choice: Off or On.

Gate A20 Option

This entry allows you to select how the gate A20 is handled. The gate A20 is a device used for above 1MByte of address memory. Initially, the gate A20 was handled via a pin on the keyboard. Today, while a keyboard still provides this support, it is more common and much faster in setting to Fast for the system chipset to provide support for gate A20.

- The choice: Normal, or Fast.

ATA 66/100 Cable Msg

This choice is enable or disable.

- The choice: Enabled or Disabled.

Typematic Rate Setting

Keystrokes repeat at a rate determined by the keyboard controller. When this controller enabled, the typematic rate and typematic delay can be selected.

- The choice: Enabled or Disabled.

Typematic Rate (Chars/Sec)

This item sets how many times the keystroke will be repeated in a second when you hold the key down.

- The choice: 6, 8, 10, 12, 15, 20, 24, or 30.

Typematic Delay (Msec)

Sets the delay time after the key is held down before it begins to repeat the keystroke.

- The choice: 250, 500, 750, or 1000.

Security Option

Select whether the password is required every time the system boots or only when you enter setup.

System The system will not boot and access to Setup will be denied if the correct password is not entered promptly.

Setup The system will boot, but access to Setup will be denied if the correct password is not entered promptly.

- The choice: System or Setup.

Note: To disabled security, select PASSWORD SETTING at Main Menu, and then you will be asked to enter password. Do not type anything and just press < Enter > ; it will disable security. Once the security is disabled, the system will boot, and you can enter Setup freely.

APIC Mode

Selects enable/disable IO APIC function

- The choice: Enabled or Disabled.

MPS Version Control For OS

Selects the operating system multiprocessor support version.

- The choice: 1.1 or 1.4

OS Select For DRAM > 64MB

Selects the operating system that is running with greater than 64MB of RAM in the system.

- The choice: Non-OS2 or OS2.

HDD S.M.A.R.T. Capability

The S.M.A.R.T (Self-Monitoring, Analysis, and Reporting Technology) system is a diagnostics technology that monitors and predicts device performance. S.M.A.R.T. software resides on both the disk drive and the host computer.

- The choice: Enabled or Disabled.

Report No FDD For Win 95

Whether report no FDD runs for Win 95 or not.

- The choice: Yes or No.

Small Logo(EPA) Show

This item allows you to enable/disable the EPA Logo.

- The choice: Enabled or Disabled.

Firmware Write Protect

Enables or disables the BIOS from being overwritten.

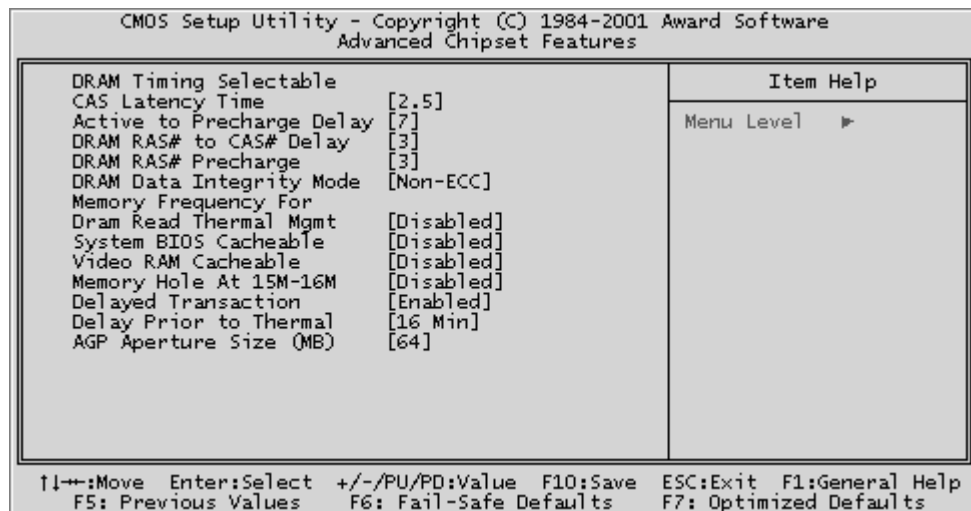

- The choice: Enabled or Disabled.

Advanced Chipset Features

This section allows you to configure the system based on the specific features of the installed chipset. This chipset manages bus speeds and access to system memory resources, such as DRAM and the external cache. It also coordinates communications between the conventional ISA bus and the PCI bus. It states that these items should never need to be altered.

The default settings have been chosen because they provide the best operating conditions for your system. If you discovered that data was being lost while using your system, you might consider making any changes.

DRAM Timing Selectable

This item select the DRAM Timing by SPD (Serial Presence Data) or by manual selection.

- The Choice: Manual or By SPD.

In some DDR SDRAM module , there is no SPD on it, select by SPD will cause system can not boot.

CAS Latency Time

When synchronous DRAM is installed, the number of clock cycles of CAS latency depends on the DRAM timing. Don't reset this field from the default value specified by the system designer.

This item select DDR SDRAM CAS latency. (1.5T, 2T, or 2.5T)

- The Choice: 1.5, 2, or 2.5.

Active to Precharge Delay

This item select the SDRAM Active to Precharge Delay. (7T, 6T, or 5T)

- The Choice: 7, 6, or 5.

DRAM RAS# to CAS# Delay

This field lets you insert a timing delay between the CAS and RAS strobe signals, and you can use it when DRAM is written to, read from, or refreshed. Faster performance is gained in high speed, more stable performance, in low speed. This field is applied only when synchronous DRAM is installed in the system.

- The Choice: 3 or 2.

DRAM RAS# Precharge

If an insufficient number of cycles is allowed for the RAS to accumulate its charge before DRAM refresh, the refresh may be-incompleted, and the DRAM may fail to retain data. Fast gives faster performance; and Slow gives more stable performance. This field is applied only when synchronous DRAM is installed in the system.

- The Choice: 3 or 2.

DRAM Data Integrity Mode

This item enable/disable DDR SDRAM ECC support. Select Parity or ECC (error-correcting code), according to the type of installed DRAM.

- The Choice: Non-ECC or ECC.

Memory Frequency For

This item sets the main memory frequency. When you use an external graphics card, you can adjust this to enable the best performance for your system.

- The Choice: DDR200, DDR266, or Auto.

Dram Read Thermal Mgmt

This item Enable/Disable DRAM read thermal management function.

- The choice: Enabled or Disabled.

System BIOS Cacheable

Selecting Enabled allows caching of the system BIOS ROM at F0000h-FFFFFh, resulting in better system performance. However, if any program is written to this memory area, a system error may result.

- The choice: Enabled or Disabled.

Video RAM Cacheable

Selecting Enabled allows caching of the video RAM , resulting in better system performance. However, if any program is written to this memory area, a system error may result.

- The Choice: Enabled or Disabled.

Memory Hole At 15M-16M

You can reserve this area of system memory for ISA adapter ROM. When this area is reserved, it cannot be cached. The user information of peripherals that need to use this area of system memory usually discusses their memory requirements.

- The Choice: Enabled or Disabled.

Delayed Transaction

The chipset has an embedded 32-bit posted write buffer to support delayed transactions cycles. Select Enabled to support compliance with PCI specification version 2.1.

- The Choice: Enabled or Disabled.

Delay Prior to Thermal

This item select the Delay time before thermal controller activate from temperature too high.

- The Choice: 4 Min, 8 Min, 16 Min, or 32 Min.

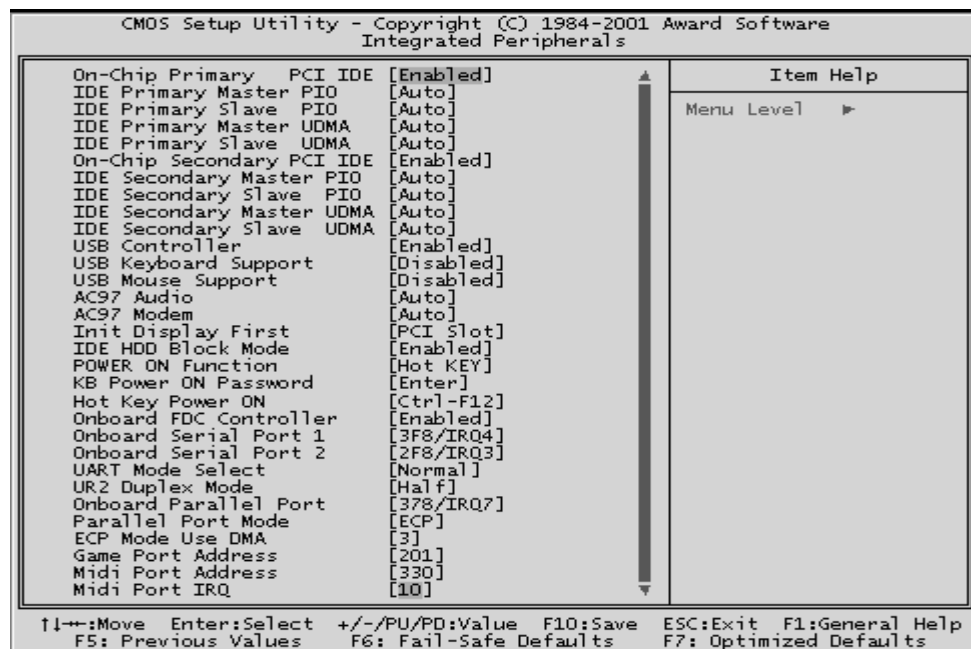

AGP Aperture Size (MB)

Select the size of Accelerated Graphics Port (AGP) aperture. The aperture is a portion of the PCI memory address range dedicated to graphics memory address space. Host cycles that hit the aperture range are forwarded to the AGP without any translation.

- The Choice: 4, 8, 16, 32, 64, 128, or 256.

Integrated Peripherals

These options display items that define the operation of peripheral components on the system's input/output ports.

On-Chip Primary PCI IDE

The integrated peripherals controller contains an IDE interface with support to two IDE channels. Select Enabled to activate each channel separately.

- The choice: Enabled or Disabled.

IDE Primary Master/Slave PIO

The two IDE PIO (Programmed Input/Output) fields let you set a PIO mode (0-4) for each of the two IDE devices that the onboard IDE interface supports. Modes 0 through 4 provide successively increased performance. In Auto mode, the system automatically determines the best mode for each device.

- The choice: Auto, Mode 0, Mode 1, Mode 2, Mode 3, or Mode 4.

IDE Primary Master/Slave UDMA

Ultra DMA33/66/100 implementation is possible only if your IDE hard drive supports it and the operating environment includes a DMA driver (Windows 95 OSR2 or a third-party IDE bus master driver). If both of your hard drive and your system software support Ultra DMA33/66/100, select Auto to enable BIOS support.

- The Choice: Auto or Disabled.

On-Chip Secondary PCI IDE

The integrated peripherals controller contains an IDE interface with support to two IDE channels. Select Enabled to activate each channel separately.

- The choice: Enabled or Disabled.

IDE Secondary Master/Slave PIO

The two IDE PIO (Programmed Input/Output) fields let you set a PIO mode (0-4) for each of the two IDE devices that the onboard IDE interface supports. Modes 0 through 4 provide successively increased performance. In Auto mode, the system automatically determines the best mode for each device.

- The choice: Auto, Mode 0, Mode 1, Mode 2, Mode 3, or Mode 4.

IDE Secondary Master/Slave UDMA

Ultra DMA33/66/100 implementation is possible only if your IDE hard drive supports it and the operating environment includes a DMA driver (Windows 95 OSR2 or a third-party IDE bus master driver). If both of your hard drive and your system software support Ultra DMA33/66/100, select Auto to enable BIOS support.

- The Choice: Auto or Disabled.

USB Controller

Select Enabled if your system contains a Universal Serial Bus (USB) controller and you have USB peripherals.

- The choice: Enabled or Disabled.

USB Keyboard Support

Select Enabled if your system contains a Universal Serial Bus (USB) controller and you have a USB keyboard.

- The choice: Enabled or Disabled.

USB Mouse Support

Enable this item if you plan to use a USB mouse.

- The choice: Enabled or Disabled.

AC97 Audio

Enables and disables the onboard audio chip. Disable this item if you are going to install a PCI audio add-on card.

- The choice: Audio or Disabled.

AC97 Modem

Enables and disables the onboard modem. Disable this item if you are going to install an external modem.

- The choice: Audio or Disabled.

Init Display First

Use this item to specify whether your graphics adapter is installed in one of the PCI slots or is integrated on the mainboard.

- The choice: PCI Slot or AGP .

IDE HDD Block Mode

Block mode is also called block transfer, multiple commands, or multiple sector read/write. If your IDE hard drive supports block mode (most new drives do), select Enabled for automatic detection of the optimal number of block read/writes per sector the drive can support.

- The choice: Enabled, or Disabled

POWER ON Function

This item is used to defined Keyboard & PS/2 mouse power-on function enabled or disabled.

- The choice: Password, Hot-KEY, Mouse move, Mouse Click, Any KEY, Button Only, Keyboard 98.

Note *USB Keyboard, USB Mouse and Serial Mouse are not supported to this function.*

KB Power on Password

When the POWER ON Function is set to Password, use this item to set the password.

Hot Key Power ON

Power-on by soft-on/off button and keyboard are available.

- The choice: Ctrl-F1 to Ctrl-F12.

Onboard FDC Controller

This item specifies onboard floppy disk drive controller. This setting allows you to connect your floppy disk drives to the onboard floppy connector. Choose the "Disabled" settings if you have a separate control card.

- The choice: Enabled Disabled.

Onboard Serial Port1/Port2

Select an address and corresponding interrupt for the first and second serial ports.

- The choice: 3E8/IRQ4, 2E8/IRQ3, 3F8/IRQ4, 2F8/IRQ3, Auto, or Disabled.

UART Mode Select

The main board support IrDA infrared through COM 2 port.

- The choice: SCE, ASKIR, IrDA or Normal.

UR2 Duplex Mode

This item specifies onboard infrared transfer mode to full-duplex.

- The choice: Full, or Half.

Onboard Parallel Port

This item allows you to determine onboard parallel port controller I/O address setting.

- The choice:: 378/IRQ7, 278/IRQ5, 3BC/IRQ7, or Disabled.

Parallel Port Mode

Select an operating mode for the onboard parallel (printer) port. Select Normal, Compatible, or SPP unless you are certain your hardware and software both support one of the other available modes.

- The choice: SPP, EPP, ECP, or ECP + EPP.

ECP Mode Use DMA

Select a DMA channel for the parallel port for use during ECP mode.

- The choice: 1 or 3.

Game Port Address

This item sets the I/O address for the Game Port .

- The choice: Disabled, 201, or 209.

Midi Port Address

This item sets the I/O address for the Midi function.

- The choice: Disabled, 330, or 300.

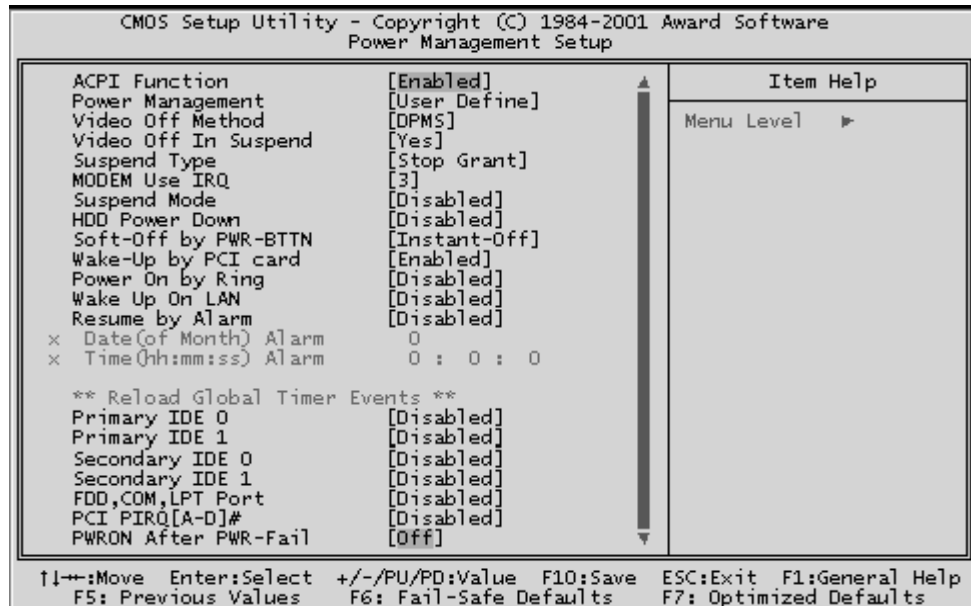

Midi Port IRQ

This item sets the interrupt request for the Midi function.

- The choice: 5 or 10.

Power Management Setup

The Power Management Setup allows you to configure your system to most effectively saving energy while operating in a manner consistent with your own style of computer use.

ACPI Function

This item allows you to enable/disable the Advanced Configuration and Power Management (ACPI)

- The choice: Enabled or Disabled.

Power Management

This category allows you to select the type (or degree) of power saving and is directly related to the following modes:

Min Saving Minimum power management.

Suspend Mode = 1 hr.

HDD Power Down = 15min.

Max Saving Maximum power management.

Suspend Mode = 1min.

HDD Power Down = 1min.

User Define Allows you to set each mode individually. When this item not disabled, each of the ranges are from 1 min. to 1 hr. except for HDD Power Down which ranges from 1 min. to 15 min. and disable.

- The choice: User Define, Min Saving, or Max Saving.

Video Off Method

This determines the manner in which the monitor is blanked.

V/H SYNC + Blank This selection will cause the system to turn off the vertical and horizontal synchronization ports and write blanks to the video buffer.

Blank Screen This option only writes blanks to the video buffer.

DPMS Initial display power management signaling.

- The choice: V/H SYNC + Blank, Blank Screen, or DPMS.

Video Off In Suspend

This item determines the manner in which the monitor is blanked.

- The choice: Yes or No.

Suspend Type

This item allows you to select the Suspend Type.

- The choice: PwrOn Suspend, Stop Grant.

MODEM Use IRQ

This item determines the IRQ in which the MODEM can use.

- The choice: 3, 4, 5, 7, 9, 10, 11, or NA.

Suspend Mode

When this item enabled and after the set up time of system inactivity, all devices except the CPU will be shut off.

- The choice: Disabled, 1 Min, 2 Min, 4 Min, 8 Min, 12 Min, 20 Min, 30 Min, 40 Min, or 1 Hour.

HDD Power Down

When this item enabled and after the set up time of system inactivity, the hard disk drive will be powered down while all other devices remain active.

- The choice: Disabled or 1 Min ~ 15 Min.

Soft-Off by PWR-BTTN

Pressing the power button for more than 4 seconds forces the system to enter the Soft-Off state when the system has "hung".

- The choice: Instant-Off or Delay 4 Sec.

Wake-Up by PCI card

This item Enabled/Disabled PCI card wakeup for PCI Spec 2.2.

- The choice: Enabled or Disabled.

Power On by Ring

This item determine the system will resume by activating of modem ring.

- The choice: Enabled or Disabled.

Wake Up On LAN

When set to Enabled, the system power will be turned on if the LAN port receives an incoming signal. You have to connect the fax/modem to the mainboard Wake Up On LAN connector for this feature to work.

- The choice: Enabled or Disabled.

Resume by Alarm

When this item enabled, you can set the date and time at which the RTC (real-time clock) alarm awakens the system from Suspend mode.

- The choice: Disabled or Enabled.

Data (of Month) Alarm

This item selects the alarm date.

- Key in a DEC number:Min = 0, Max = 31.

Time (hh:mm:ss) Alarm

This item selects the alarm Time.

[hh]

- Key in a DEC number:Min = 0, Max = 23.

[mm/ss]

- Key in a DEC number:Min = 0, Max = 59.

***** Reload Global Timer Events *****

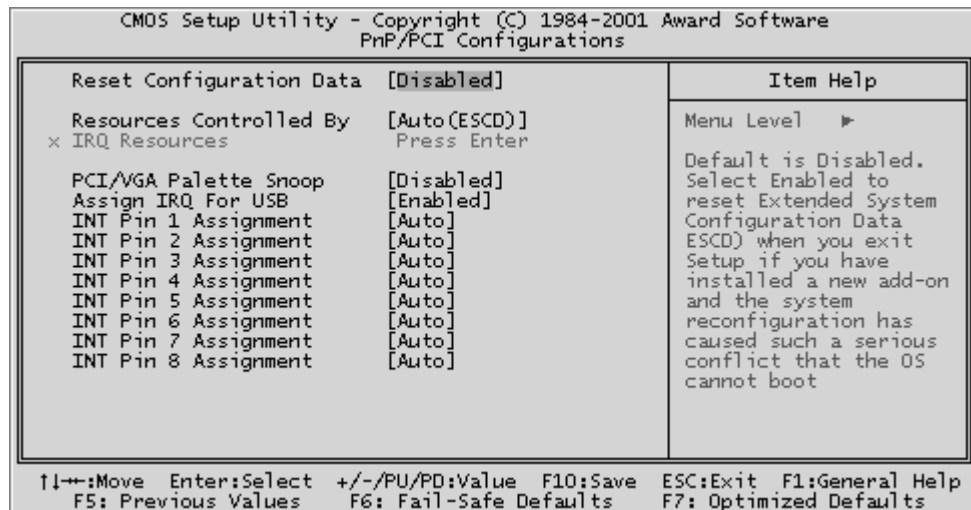

If any of these items is set to Disabled, system will not monitor the activity event and reload global timer.

If these items is set to Enabled, system will monitor the system activity event; if any of the events it monitored, it will cause system to reload global timer.

These items include Primary IDE0/1, Secondary IDE 0/1, FDD Port, COM Port, LPT Port, PCI PIRQ[A-D]#, and PWR0M After PWR-Fail.

- The choice: Disabled or Enabled.

PnP/PCI Configurations

This section describes the configuration of PCI bus system. PCI or Personal Computer Interconnection is a system which allows I/O devices to operate at the speed CPU itself keeps when CPU communicating with its own special components. This section covers some very technical items, and it is strongly recommended that only experienced users should make any changes to the default settings.

Reset Configuration Data

Normally, you leave this field Disabled. Select Enabled to reset Extended System Configuration Data (ESCD) when you exit from Setup if you have installed a new device or software and the system reconfiguration has caused such a serious conflict that the operating system can not boot.

- The choice: Enabled or Disabled .

Resource controlled By

The Award Plug-and-Play BIOS has the capacity to automatically configure all of the boot and Plug-and-Play compatible devices. However, this capability means absolutely nothing unless you are using a Plug-and-Play operating system such as Windows 95.

If you set this field to "manual" , choose specific resources by going into each of the sub-menu that follows this field (a sub-menu is proceeded by a ">").

- The choice: Auto(ESCD) or Manual.

IRQ Resources

When resources are controlled manually, assign each system interrupt a type, depending on the type of device using the interrupt.

IRQ3/4/5/7/9/10/11/12/14/15 assigned

This item allows you to determine the IRQ assigned to the ISA bus and is not available to any PCI slot. Legacy ISA for devices is compliant with the original PC AT bus specification; PCI/ISA PnP for devices is compliant with the Plug-and-Play standard whether designed for PCI or ISA bus architecture.

- The choice: PCI Device or Reserved.

PCI/VGA Palette Snoop

This item is designed to overcome problems that can be caused by some nonstandard VGA card. This board includes a built-in VGA system that does not require palette snooping so you must leave this item Disabled.

- The choice: Enabled or Disabled.

Assign IRQ For USB

Names the interrupt request (IRQ) line assigned to the USB on your system. Activity of the selected IRQ always awakens the system.

- The choice: Enabled or Disabled.

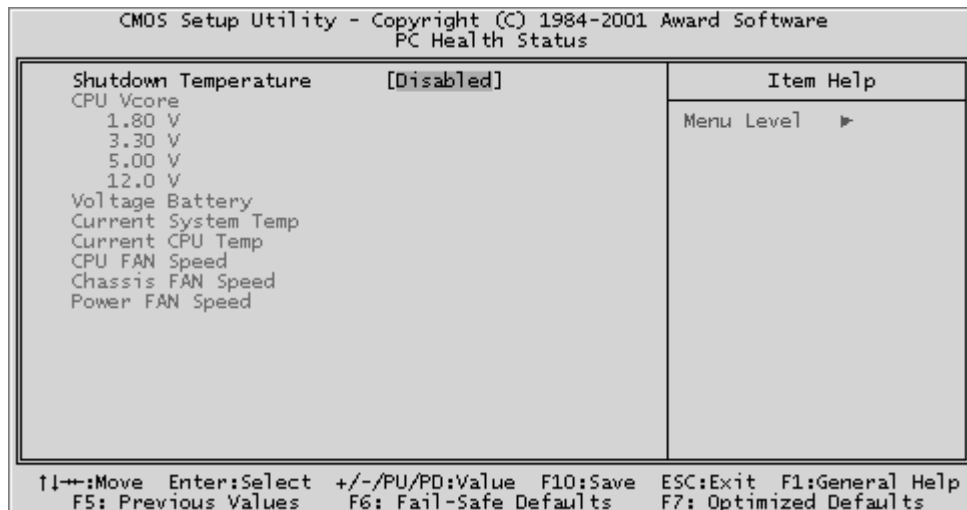

INT Pin 1/2/3/4/5/6/7/8 Assignment

Names the interrupt request (IRQ) line assigned to PCI 1 through PCI 8 on system. Activity of selected PCI slot awakens system.

- The choice: Auto, 3, 4, 5, 7, 9, 10, 11, 12, 14, or 15.

PC Health Status

Shutdown Temperature

Enables you to set the maximum temperature the system can reach before powering down.

- The choice: Disabled, 60°C/140°F, 65°C/149°F, 70°C/158°F.

System Component Characteristics

These fields provide you with information about the systems current operating status. You cannot make changes to these fields.

The fields include

CPU Vcore

1.80V

3.30V

5V

12.0V

Voltage Battery

Current System Temp

Current CPU Temp

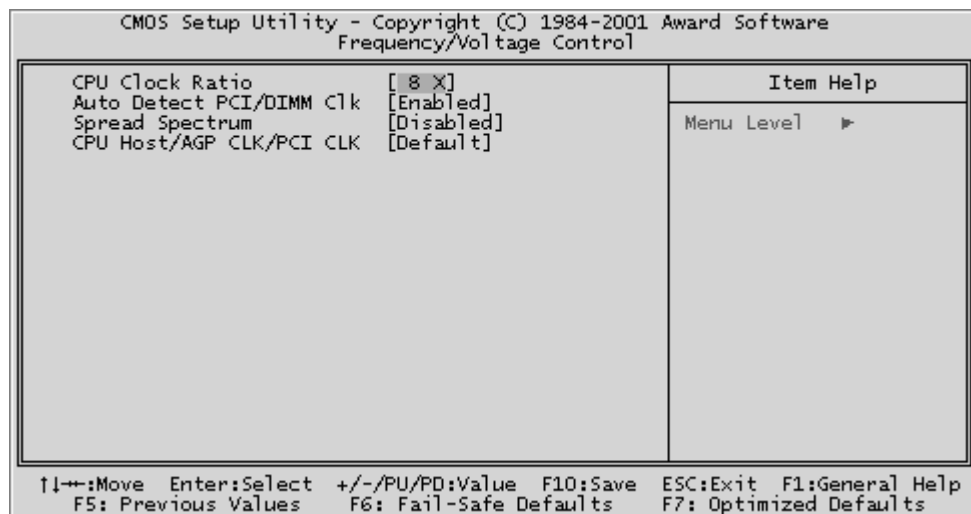

Chassis Fan Speed

Power Fan Speed

Frequency/Voltage Control

This item enables you to set the clock speed and system bus for your system. The clock speed and system bus are determined by the kind of processor you have installed in your system.

CPU Clock Ratio

This item allows you to adjust CPU Ratio.

- The choice: Min = 8 Max = 50

Auto Detect PCI/DIMM Clk

This item allows you to enable/disable auto detection DIMM/PCI Clock.

- The choice: Enabled, or Disabled.

Spread Spectrum

This item allows you to enable/disable the spread spectrum modulation.

- The choice: Enabled, or Disabled.

CPU Host/ AGP CLK/ PCI CLK

Use the CPU Host Clock to set the frontside bus frequency for the installed processor (usually 133MHz, 100MHz or 66MHz)

- The choice: Default, 100/66/33MHz, 103/69/34MHz, 105/70/35MHz, 107/71/36MHz, 109/73/36MHz, 111/74/37MHz, 114/76/38MHz, 120/80/40MHz, 127/85/42MHz, 130/87/43MHz, 133/67/33MHz, 137/69/34MHz, 139/70/35MHz, 141/71/35MHz, 143/72/36MHz, 145/73/36MHz, 150/75/36MHz, 155/78/39MHz, 160/80/40MHz.

Load Fail-Safe Defaults

When you press <Enter> on this item, you will get a confirmation dialog box with a message similar to:

Load Fail-Safe Defaults (Y/N) ? N

Pressing 'Y' loads the BIOS default values for the most stable, minimal performance system operations.

Load Optimized Defaults

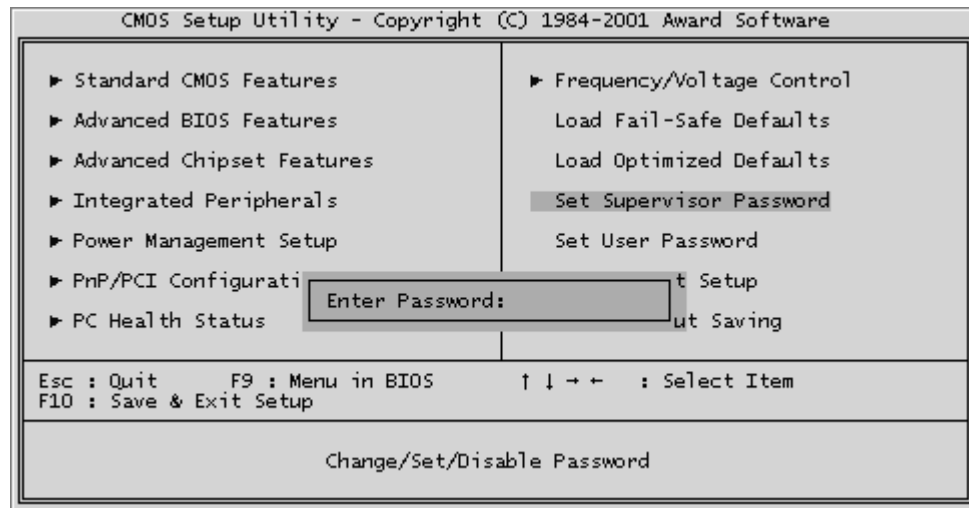

When you press <Enter> on this item, you will get a confirmation dialog box with a message similar to:

Load Optimized Defaults (Y/N) ? N

Pressing 'Y' loads the default values that are factory-set for optimal performance system operation.

Supervisor/User Password Setting

You can set either supervisor or user password, or both of them. The differences between them are:

Supervisor Password and User Password

The options on the Password screen menu make it possible to restrict access to the Setup program by enabling you to set passwords for two different access modes: Supervisor mode and User mode. In general, Supervisor mode has full access to the Setup options, whereas User mode has restricted access to the options. By setting separate Supervisor and User password, a system supervisor can limit who can change critical Setup values.

Enter Password

Type the password up to eight characters, and press <Enter>. The password typed now will clear any previously entered password from CMOS memory. You will be asked to confirm the password. Type the password again and press <Enter>. You may also press <Esc> to abort the selection and not enter a password. To disable password, just press <Enter> when you are prompted to enter password. A message will confirm the password being disabled. Once the password is disabled, the system will boot and you can enter Setup freely.

Password Disable

If you select System at Security Option of BIOS Features Setup Menu, you will be prompted in entering the password whenever the system is rebooted or you try to enter Setup. If you select Setup at Security Option of BIOS Features Setup Menu, you will be prompted only when you try to enter Setup.

Warning: Retain a record of your password in a safe place. If you forget the password, the only way to access the system is to clear CMOS, please refer to "Clear CMOS" on page 30.

 **Save & Exit Setup**

Pressing <Enter> on this item asks for confirmation:

Save to CMOS and EXIT (Y/N)? Y

Pressing "Y" stores the selections made in the menus of CMOS - a special section of memory that stays on after you turn your system off. The next time you boot your computer, the BIOS configures your system according to the Setup selections stored in CMOS. After saving the values the system is restarted again.

 **Exit Without Saving**

Pressing <Enter> on this item asks for confirmation:

Quit without saving (Y/N)? Y

This allows you to exit from Setup without storing in CMOS any change. The previous selections remain in effect. This exits from the Setup utility and restarts your computer.
