Introduction

This Technical Manual applies for the system board D873.

Notational conventions

The meanings of the symbols and fonts used in this manual are as follows:

This indicates instructions which it is essential to observe. Failure to do so may endanger your health, the operational integrity and electrical safety of your PC, or the security of your data.

This symbol is followed by supplementary information, remarks and tips.

► Texts which follow this symbol describe activities that must be performed.

▬ This symbol means that you must enter a blank space at this point.

This symbol means that you must press the Enter key.

Texts in this typeface are screen outputs from the PC.

Texts in this bold typeface are the entries you make via the keyboard.

Texts in italics indicate commands or menu item.

"Quotation marks" indicate highlighted text and names of chapters."

Features

- Dual processor system (second processor optional)
- Processor: Pentium, 75 to 166 MHz with 16 Kbytes internal cache (First-Level cache)
- Prepared for Pentium OverDrive processor (OverDrive-Ready)
- Neptun EISA PCI chipset
- 72-bit data bus (64-bit data and 8-bit parity)
- 512 Kbytes synchronous Second-Level cache (parity-checked)
- Memory configuration on system board: 8 Mbytes to 512 Mbytes (4 banks)
- 512 Kbytes Flash BIOS
- 4 PCI slots (1 slot shared)
- 4 EISA slots, bus master-capable (1 slot shared)
- Monitor controller connected to PCI bus; graphics processor TSENG ET4000/W32P, 1 Mbyte DRAM video memory
- ASIC for Server Management
- IDE hard disk controller connected to PCI bus for up to two IDE drives (e.g. IDE hard disk drive, ATAPI CD ROM drive))
- Real-time clock/calendar with integrated battery backup
- Floppy disk controller (up to 2.88 Mbytes format)
- Connector for loudspeaker, two fans, remote-On/Off, Floppy disk drive, IDE disk drive, control panel and service
- Monitor port
- Parallel port (ECP- and EPP-compatible)
- Two serial ports (compatible 16550, 16-Byte-FIFO)
- PS/2 mouse port
- PS/2 keyboard port
- CAN bus port for control of external drive cabinets (CAN = Controller Area Network)
- Security functions in BIOS

Ports and connectors

- | | |
|--|---|
| 1 = Connector for soft-off power supply | 14 = Power supply for Primergy 500 series |
| 2 = Power supply 5V and $\pm 12V$ | +5 V, 3,3 V and $\pm 12V$ |
| 3 = Power supply 5V | 15 = Connector for power supply 3,3 V |
| 4 = Temperature sensor for processor 2 | 16 = SCSI LED |
| 5 = Temperature sensor for processor 1 | 17 = IDE drives |
| 6 = ON/OFF switch | 18 = Floppy disk drives |
| 7 = Control panel 1 | 19 = Remote on |
| 8 = Control panel 2 | 20 = CAN bus controller 2 |
| 9 = Loudspeaker | 21 = CAN bus controller 1 |
| 10 = Fan 1 | 22 = Keyboard and mouse |
| 11 = Temperature sensor for air intake | 23 = Serial ports 1 and 2 |
| 12 = Fan 2 | 24 = Parallel port and monitor port |
| 13 = Signaling/auxiliary voltage for Primergy 500 series | |

Possible screen resolutions

The screen resolutions in the following table refer to the monitor controller on the system board.

If you are using an external monitor controller, you will find details of supported screen resolutions in the Operating Manual or Technical Manual supplied with the controller.

Screen resolution	Refresh rate (Hz)	Horizontal-rate (kHz)	Max. number of colors
640x350	70	31,3	16
640x350	84	38	16
640x480	60	31,3	16777216
640x480	75	38	16777216
640x480	90	48	65536
720x400	70	31,5	16
720x400	84	38	16
800x600	56	35	65536
800x600	60	38	65536
800x600	75	47	65536
800x600	90	60	256
1024x768	87 interlaced	36	256
1024x768	60	49	256
1024x768	70	57	256
1024x768	75	60	256
1280x1024	87 interlaced	49	16

Interrupt table

	Assigned IRQ
System clock	IRQ0
Keyboard	IRQ1
not available	IRQ2
Serial port COM2	IRQ3
Serial port COM1	IRQ4
free	IRQ5
Floppy disk drive controller	IRQ6
Parallel port LPT1	IRQ7
Real-time clock (RTC)	IRQ8
monitor controller/free	IRQ9
free	IRQ10
free	IRQ11
Mouse controller	IRQ12
Numeric processor	IRQ13
IDE controller	IRQ14
free	IRQ15

„Assigned IRQ“ = interrupts assigned as shipped

Note that an interrupt cannot be used by two ISA boards or onboard controllers at the same time.

The monitor controller of the system board does not require interrupt IRQ9. If you are using a different controller, it may need interrupt IRQ9.

Important Notes

Be sure to read this page carefully and note the information before you open the PC.

Please note the information provided in the chapter "Safety" in the Operating Manual of the PC.

Incorrect replacement of the lithium battery may lead to a risk of explosion. It is therefore essential to observe the instructions in the section „Add-on modules“ - „Replacing the lithium battery“. The lithium battery must be replaced with an identical battery or a battery type recommended by the manufacturer (CR2032).

Do not throw lithium batteries into the trashcan. Your vendor or dealer or their authorized representatives will take used batteries back free of charge so that they can be recycled or disposed of in the proper manner.

ADVARSEL

Lithiumbatteri - Eksplosionsfare ved fejlagtig håndtering. Udskiftning må kun ske med batteri af samme fabrikat og type. Lever det brugte batteri tilbage til leverandøren.

ADVARSEL

Eksplosjonsfare ved feilaktig skifte av batteri. Benytt samme batteritype eller en tilsvarende type anbefalt av apparatfabrikanten. Brukte batterier kasseres i henhold til fabrikantens instruksjoner.

VARNING

Eksplosionsfara vid felaktigt batteribyte. Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparatillverkarenfabrikanten. Kassera använt batteri enligt fabrikantens instruktion.

VAROITUS

Paristo voi räjähtää, jos se on virheellisesti asennettu. Vaihda paristo ainoastaan laitevalmistajan suosittelemaan tyyppiin. Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.

Important Notes

Connecting cables for peripherals must be adequately insulated to avoid interference.

Modules with electrostatic sensitive devices (ESD) may be identified by labels.

When you handle modules fitted with ESDs, you must observe the following points under all circumstances:

- You must always discharge yourself (e.g. by touching a grounded object) before working.
- The equipment and tools you use must be free of static charges.
- Pull out the power plug before inserting or pulling out modules containing ESDs.
- Always hold modules with ESDs by their edges.
- Never touch pins or conductors on modules fitted with ESDs.

Settings in BIOS Setup

The *BIOS Setup* menu allows you to set your hardware configuration and system functions. In addition, the *BIOS Setup* displays technical information on the PC's configuration.

When it is supplied, the PC is set to factory default settings which you can alter in the *BIOS Setup* menus. Any changes you make take effect as soon as you save the settings and quit the *BIOS Setup*.

The Operating Manual describes how to call the *BIOS Setup* and change menu entries.

You can select the following settings in the *BIOS Setup*:

Main - system functions

Advanced - advanced system configuration

Security - security features

Power - power-management features

Exit - save and quit

The various menus are described below with all setting options. Since the setting options depend on your PC's hardware configuration, some of them may not be offered in the *BIOS setup*.

System settings - Main menu

In the *Main menu* you can set up the following:

- Time (in the field marked *System Time*)
- Date (in the field marked *System Date*)
- Floppy disk drive (in the field marked *Diskette A* or *Diskette B*)
- Hard disk drive (in the submenu of *Hard Disk*)
- System boot (in the submenu of *Boot Options*)
- Display device (in the field marked *Video Display*)

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd.			
Main	Advanced	Security Server Exit	
System Time:	[07:42:19]	Item Specific Help	
System Date:	[08/11/1995]		
Diskette A:	[1.4M]		
Diskette B:	[None]		
▶ Hard Disk 1:	None		
▶ Hard Disk 2:	None		
▶ Boot Options			
Video Display:	[EGA/VGA]		
Base Memory:	640K		
Extended Memory:	63M		
F1 Help	↑↓ Select Item	-/+ Change Values	F9 Setup Defaults
ESC Exit	←→ Select Menu	Enter Select ▶ Sub-Menu	F7 Previous Values

Example for the *Main menu*

Time and Date - System Time / System Date

The *System Time* field and the *System Date* field show the time and date respectively according to the PC. The time is shown in the format *hh:mm:ss* (hours:minutes:seconds) and the date is shown in the format *mm/dd/yyyy* (month/day/year). You can move the cursor between the *System Time* and *System Date* fields (e.g. from hours to minutes) using the tabulator key.

If the settings in the *System Time* and *System Date* fields are frequently wrong when you power up the computer, the lithium battery is dead. Change the battery as described in „Add-on modules“ - „Replacing the lithium battery“).

Floppy disk drive - Diskette A / Diskette B

These two fields are used to specify the type of floppy disk drive installed.

360K, 720K, 1.2M, 1.4M, 2.8M

The entry depends on the floppy disk drive installed.
(Default entry Diskette A : 1.4M).

None A floppy disk drive is not installed.
(Default entry for Diskette B:).

Hard disk drives - Hard Disk 1 and Hard Disk 2

call the submenu to make corresponding settings of the IDE hard disk drive.

 You should change the default settings only if you are connecting an additional IDE drive.

The following description of the setting options for *Hard Disk 1* also applies to *Hard Disk 2*. The default settings depend on the installed drive.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd. Main		
Hard Disk 1:	850 Mbyte	Item Specific Help
Autotype Hard Disk:	[Press Enter]	
Type:	[User]	
Cylinders:	[1647]	
Heads:	[16]	
Sectors/Track:	[63]	
Write Precomp:	[None]	
Transfer Mode:	[Standard]	
LBA Translation:	[Disabled]	
F1 Help ↓ Select Item -/+ Change Values F9 Setup Defaults ESC Exit ←→ Select Menu Enter Select ► Sub-Menu F7 Previous Values		

Example for the submenu *Hard Disk 1*

Only if you have installed a new unrecorded IDE hard disk drive, you should mark the *Autotype Hard Disk* field.

If you have set the hard disk parameters with *Autotype Hard Disk*, you can only reduce the values.

If you have installed a new unrecorded IDE hard disk drive, you should mark the *Autotype Hard Disk* field and press Enter. This has the effect of setting the optimum values for the IDE hard disk drive. You can change these values if you set the *Type* field to *User*.

Type - Hard Disk Type

This field is used to specify the type of hard disk drive.

None You cannot change the hard disk parameters (*Cylinders, Heads, Sector/Track* and *Write Precomp*). An IDE drive has not been installed.

1 to 39 The hard disk parameters (*Cylinders, Heads* etc.) are preset.

Auto If the hard disk supports this mode, the setup menu reads the hard disk parameters from the disk itself and sets them automatically. You do not need to select the parameters yourself.

User You can enter the hard disk parameters (*Cylinders, Heads* etc.) yourself.
If you have set the hard disk parameters with *Autotype Hard Disk*, you can only reduce the values.

Examples of user-defined entries (IDE drives):

hard disk parameter	hard disk capacity		
	850 Mbyte	1 Gbyte	1,6 Gbyte
Cylinders	1647	2097	3148
Heads	16	16	16
Sectors	63	63	63
Write Precomp	None	None	None

Cylinders, Heads, Sectors/Track, Write Precomp - hard disk parameter

These hard disk parameters are set in accordance with the IDE hard disk drive. If you want to change the hard disk parameters manually, set the *Type* field to *User*.

Transfer Mode

This field specifies the transfer mode for the IDE hard disk drive.

Standard One block is transferred for each interrupt (default entry).

2 Sectors, 4 Sectors, 6 Sectors, 8 Sectors, 16 Sectors

The set number of blocks (sectors) is transferred for each interrupt.

LBA Translation - Addressing

This field enables and disables the LBA (Logical Block Addressing) mode. LBA mode allows you to install and use hard disks with a capacity of more than 528 Mbytes. If a hard disk supports LBA mode, you can use the full capacity of the IDE hard disk.

The default entry depends on the installed IDE hard disk drive. Change the default entries only if you are installing another hard disk drive.

You may only use IDE drives in the LBA mode selected when they were set up. In other words, if you set up a hard disk with LBA mode *disabled*, you may only operate the hard disk with LBA mode *disabled*.

Enabled If the hard disk supports LBA and it has a capacity of more than 528 Mbytes, the BIOS translates the hard disk parameters, allowing the disk's full capacity to be used.

If the hard disk does not support LBA, its parameters are not translated.

Disabled The BIOS uses the hard disk parameters and supports a maximum capacity of 528 Mbytes.

System startup - Boot Options

calls the submenu in which you can select the settings for system startup.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd. Main	
Boot Options	Item Specific Help
POST Error Halt: [No Halt On Any Errors] Quick Boot: [Disabled]	
F1 Help ↑↓ Select Item -/+ Change Values F9 Setup Defaults ESC Exit ←→ Select Menu Enter Select ► Sub-Menu F7 Previous Values	

Example for submenu *Boot Options*

POST Error Halt - Aborting system startup

defines whether the system startup is to be aborted and the system halted when an error is detected.

Halt On All Errors

If the self-test detects an error, system startup is aborted after the self-test, and the system is halted.

No Halt On Any Errors

The system startup is not aborted. The error is ignored as far as possible (default entry).

Quick Boot

can reduce the extent of the self-test and thus accelerate the system startup.

- Enabled* When the PC is switched on, the quick self-test is carried out, in which the floppy disk drives are not checked.
- Disabled* When the PC is switched on, the complete PC configuration is tested (default entry).

Type of monitor - Video Display

This field is used to specify the type of monitor connected.

EGA/VGA, Color 80, Monochrome
Default entry: *EGA/VGA*

Base Memory

This field indicates the size of the available base memory below 1 Mbyte.

Extended Memory

This field indicates the size of the memory above 1 Mbyte.

Making advanced system settings - Advanced menu

Change the default settings only for special applications. Incorrect settings can cause malfunctions.

You can make the following system settings in the *Advanced* menu:

- Internal cache and second-level cache (in the *Cache Memory* submenu)
- Copy BIOS sections to the RAM (in the *Shadow Memory* submenu)
- Ports and controllers (in the *Peripheral Configuration* submenu)
- PCI functionality (in the *PCI Configuration* submenu)
- Additional system settings (in the *Advanced System Configuration* submenu)
- Plug&Play functionality (in the *Plug and Play O/S* field)
- Configuration data (in the *Reset Configuration Data* field)
- Hard disk access (in the *Large Disk Access Mode* field)

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd.			
Main	Advanced	Security	Server Exit
Warning!		Item Specific Help	
Setting items on this menu to incorrect values may cause your system to malfunction.			
<ul style="list-style-type: none"> ▶ Cache Memory ▶ Shadow Memory ▶ Peripheral Configuration ▶ PCI Configuration ▶ Advanced System Configuration

Reset Configuration Data:		[No]	
Large Disk Access Mode:		[DOS]	
F1 Help	↑↓ Select Item	-/+ Change Values	F9 Setup Defaults
ESC Exit	←→ Select Menu	Enter Select	▶ Sub-Menu F7 Previous Values

Example for the *Advanced* menu

Cache Memory

calls the submenu in which you can make the settings for the internal cache (in the processor) and the second-level cache (on the system board).

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd. Advanced	
Cache Memory	Item Specific Help
Cache: [Intern And Extern] Cache Mode: Write Back Cache System BIOS Area: [Enabled] Cache Video BIOS Area: [Enabled] Cache Memory Regions: C800 - CBFF: [Disabled] CC00 - CFFF: [Disabled] D000 - D3FF: [Disabled] D400 - D7FF: [Disabled] D800 - DBFF: [Disabled] DC00 - DFFF: [Disabled]	
F1 Help ↑↓ Select Item -/+ Change Values F9 Setup Defaults ESC Exit ←→ Select Menu Enter Select ▶ Sub-Menu F7 Previous Values	

Example for submenu *Cache Memory*

Cache - cache utilization

This field switches the cache on and off. The cache is a buffer to which parts of the main memory and BIOS can be temporarily copied. The PC's performance is higher when the cache is switched on.

You must disable the cache if:

- the access time is too short for older applications
- you are installing *OS/2 Warp*.

Intern Only Only the internal cache is used.

Intern And Extern

Internal (first-level cache) and external cache (second-level cache) are enabled. If there is no external cache, only the internal cache is used (Default entry).

Disabled Internal (first-level cache) and external cache (second-level cache) are disabled. All cache-related settings are then without effect.

Cache Mode

Condition: The *Cache* field must be set to *Intern Only* or *Intern And Extern*.

Cache Mode sets the mode in which the CPU uses the cache. The field is set to *Write Back* and can not be changed.

In write-back mode the CPU writes information to the cache and the information is only written to main memory if necessary. Memory and cache contents are not identical.

Cache System BIOS Area / Cache Video BIOS Area

Condition: The *Cache* field must be set to *Intern Only* or *Intern And Extern*.

Cache System BIOS Area and *Cache Video BIOS Area* lets you specify the BIOS that should be mapped to the cache. Mapping the BIOS to the cache increases system performance.

Enabled The specified BIOS is mapped to the cache (default entry).

Disabled The specified BIOS is not mapped to the cache.

Cache Memory Regions

Condition: The *Cache* field must be set to *Intern Only* or *Intern And Extern*.

Cache Memory Regions lets you specify the BIOS ROM areas that should be mapped to the cache. Mapping the BIOS ROM areas to the cache increases system performance.

Enabled The relevant ROM area is mapped to the cache.

Disabled The relevant ROM area is not mapped to the cache (default entry).

ROM areas in the RAM - Shadow Memory

calls the submenu in which you can specify which parts of the ROM (Read Only Memory) are to be copied to the faster RAM (Random Access Memory) at system startup.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd. Advanced	
Shadow Memory	Item Specific Help
System Shadow: Enabled Video Shadow: [Enabled] Shadow Memory Regions: C800 - CBFF: [Disabled] CC00 - CFFF: [Disabled] D000 - D3FF: [Disabled] D400 - D7FF: [Disabled] D800 - DBFF: [Disabled] DC00 - DFFF: [Disabled]	
F1 Help ↑↓ Select Item -/+ Change Values F9 Setup Defaults ESC Exit ←→ Select Menu Enter Select ► Sub-Menu F7 Previous Values	

Example for submenu *Shadow Memory*

System Shadow

This field is always *Enabled*, because the System BIOS is automatically copied to the faster RAM.

Video Shadow

This field allows you to copy the video BIOS to fast RAM. Copying the video BIOS to fast RAM increases system performance.

Enabled The video BIOS is copied to fast RAM (default entry).

Disabled The video BIOS is not copied to fast RAM. This setting is not effective unless an external monitor controller is used.

Shadow Memory Regions - ROM areas

Shadow Memory Regions allows you to copy ROM areas to fast RAM. Copying ROM areas to fast RAM increases system performance.

Enabled The ROM area is copied to fast RAM.

Disabled The ROM area is not copied to fast RAM (default entry).

Ports and controller - Peripheral Configuration

Use the EISA configuration program (ECU) to make settings at the ports and controllers.

Peripheral Configuration calls the submenu in which you can set the ports and controllers.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd. Advanced	
Peripheral Configuration	Item Specific Help
Serial 1: [Auto] Serial 2: [Auto] Parallel: [Auto] Parallel Mode: [Printer] Diskette Controller: [Enabled] Hard Disk Controller: [Enabled] Mouse Controller: [Enabled]	
F1 Help ↑↓ Select Item -/+ Change Values F9 Setup Defaults ESC Exit ←→ Select Menu Enter Select ► Sub-Menu F7 Previous Values	

Example for submenu *Peripheral Configuration*

Serial 1 / Serial 2 - Serial ports

This field selects the address and the interrupt used to access the corresponding serial port.

3F8h, IRQ4, 2F8h, IRQ3, 3E8h, IRQ4, 2E8h, IRQ3,

The serial port is set to the shown address and interrupt.

Auto The serial port is automatically set to the next available combination (address, interrupt) (Default entry).

Disabled The serial port is disabled. The corresponding interrupt and address are free.

Parallel - parallel port

This field selects the address and the interrupt used to access the parallel port.

378h, IRQ7, 278h, IRQ5, 3BCh, IRQ7

The parallel port is set to the shown address and interrupt.

Auto The parallel port is automatically set to the next available combination (address, interrupt) (default entry).

Disabled The parallel port is disabled.

Parallel Mode

This field is used to specify whether the parallel port is to be used as a bi-directional input/output port or just as an output port. *ECP* and *EPP* transfer modes allow faster transfer rates of 2 and 2.4 Mbytes/s. These modes will only work with peripheral devices which support them. The field *Parallel* must be set to *378h* or *278h*

Printer The port functions as an output port only (default entry)

Bidirection Data can be transferred in both directions across the port.

EPP Fast transfer mode (up to 2 Mbytes/s), can output and receive data. Requires a peripheral device which supports the EPP (Enhanced Parallel Port) transfer mode.

ECP Fast transfer mode (up to 2.4 Mbytes/s), can output and receive data. Requires a peripheral device which supports the ECP (Enhanced Capability Port) transfer mode.

Diskette Controller

This field is used to enable and disable the built-in floppy disk controller on the system board.

Enabled The floppy disk controller is enabled - IRQ 6 is used. (default entry).

Disabled The floppy disk controller is disabled - IRQ 6 is free.

Hard Disk Controller

This field allows you to enable and disable the built-in IDE hard disk controller. The associated interrupt (IRQ 14) will only be available if no hard disk is physically connected.

Enabled The IDE hard disk controller is enabled (default entry).

Disabled The IDE hard disk controller is disabled.

Mouse Controller

This field is used to enable and disable the built-in mouse controller on the system board.

Enabled The mouse controller is enabled - IRQ 12 is used (default entry).

Disabled The mouse controller is disabled - IRQ 12 is free.

PCI Configuration

Use the EISA configuration program (ECU) to make settings at the VGA/PCI interrupts.

PCI Configuration calls the submenu in which you can make the settings for the PCI slots. The submenu has a scroll bar so that you can also show the settings for the PCI slots 3 and 4.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd. Advanced	
PCI Configuration	Item Specific Help
PCI Interrupt Mapping INTA#: [Auto] PCI Interrupt Mapping INTB#: [Auto] PCI Interrupt Mapping INTC#: [Auto] PCI Interrupt Mapping INTD#: [Auto] VGA Interrupt: [Disabled] PCI Device, Slot #1 Default Latency Timer: [Yes] Latency Timer: [0040] PCI Device, Slot #2 Default Latency Timer: [Yes] Latency Timer: [0040]	
F1 Help ↓ Select Item -/+ Change Values F9 Setup Defaults ESC Exit ←→ Select Menu Enter Select ► Sub-Menu F7 Previous Values	

Example for submenu *PCI Configuration*

PCI Interrupt Mapping INTx# - Assignment of the PCI interrupts

defines which PCI interrupt is switched to which ISA interrupt. For a change to take effect, you must switch your system off and then on again when the *Setup-BIOS* has terminated.

With multifunctional PCI boards, all PCI interrupts can be used. The controllers on the system board do not need any PCI interrupts.

If you use a setting other than *Auto*, the Plug&Play functionality of the system BIOS for PCI boards is deactivated.

The PCI interrupts INTA#, INTB#, INTC# and INTD# are assigned as follows for PCI boards that require only a single PCI interrupt:

PCI slot 1 = INTA#, PCI slot 2 = INTB#,
 PCI slot 3 = INTC#, PCI slot 4 = INTD#,

Auto The PCI interrupts are assigned automatically in accordance with the Plug&Play guidelines (default entry).

Disabled No ISA interrupt is assigned to the PCI interrupt.

IRQ03, IRQ04, IRQ05, IRQ06, IRQ07, IRQ09, IRQ10, IRQ11, IRQ12, IRQ14, IRQ15
 The PCI interrupt is switched to the selected ISA interrupt. You may not select an ISA interrupt that is used by a component on the system board (e.g. controller) or an ISA board.

VGA Interrupt - Assigning PCI-VGA interrupt

assigns an interrupt to the monitor controller. The monitor controller on the system board does not require an interrupt and can be operated in *Disabled* mode. If you have not assigned a different interrupt using *PCI Interrupt Mapping*, then IRQ9 is assigned.

Enabled The interrupt is assigned to the monitor controller.

Disabled No interrupt is assigned to the monitor controller (default entry).

PCI Device, Slot #n: Default Latency Timer

specifies the lowest number of clock cycles in which a PCI master module can be active at the PCI bus. *n* stands for the number of the PCI slot. For the change to take effect, you must switch your PC off and then on again after the *Setup-BIOS* has terminated.

Yes The value predefined by the PCI module is accepted. The entry in the corresponding field for *PCI Device, Slot #n: Latency Timer* is ignored. (Default entry)

No The value predefined by the PCI module is ignored. The value set in the corresponding field for *PCI Device, Slot #n: Latency Timer* determines the number of clock cycles.

PCI Device, Slot #n: Latency Timer

Condition: the corresponding field for *PCI Device, Slot #n: Default Latency Timer* must be set to *No*.

The field defines the lowest number of clock cycles in which a burst can be transferred on the PCI bus. *n* stands for the number of the PCI slot.

0000h to 0280h Number of clock cycles (default entry = 0040h).

Additional system settings - Advanced System Configuration

calls the submenu in which you can make additional system settings.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd. Advanced	
Advanced System Configuration	Item Specific Help
APIC: [Enabled] Video Subsystem: [Auto]	
F1 Help ↑↓ Select Item -/+ Change Values F9 Setup Defaults ESC Exit ←→ Select Menu Enter Select ► Sub-Menu F7 Previous Values	

Example for the submenu *Advanced System Configuration*

APIC - Multiprocessor Interrupt Controller

defines the functionality of the APIC (Advanced Interrupt Controller) in the processor.

Enabled The second processor (if present) can be used by multiprocessor operating systems to enhance performance (default entry).

Disabled The second processor cannot be used by the operating system.

An operating system must always be operated with the settings as installed.
Novell NetWare can be operated only with the setting *Disabled*.

Video Subsystem - Monitor controller

defines settings for the monitor controller. If you are using your own monitor controller and are encountering problems, this setting may be the cause.

Auto default entry

3C3h, 46E8h further possible settings

Have settings changed only by a service technician or have the service technician instruct you in how to make changes.

Plug&Play functionality - Plug & Play O/S

defines the Plug&Play functionality. Plug&Play means that inserted modules are automatically recognized and installed if they support Plug&Play.

Yes The operating system (e.g. Windows 95) is responsible for some of the Plug&Play functions. Select this setting only if the operating system supports Plug&Play.

No The system BIOS is responsible for the complete Plug&Play functionality (default entry).

Reset Configuration Data

specifies whether or not the configuration data are reset and reinitialized when the system is booted.

- Yes* After the system is booted, the old configuration data are reset and the entry in this field is set to *No*. The current configuration data are ascertained by means of the Plug&Play functionality. The installed boards and drives are initialized with these data. Non-Plug&Play components must be entered manually.
- No* After the system is started, the Plug&Play functionality ascertains the current configuration data and uses this data to initialize the installed boards and drives. The configuration data of non-Plug&Play components are not reset (default entry).

Hard disk access - Large Disk Access Mode

specifies the type of hard disk access for large hard disks (more than 1024 cylinders, 16 heads).

- DOS* the operating system uses MS-DOS-compatible hard disk accesses (default entry).
- Other* If the operating system uses hard disk accesses which are not MS-DOS-compatible (e.g. Novell, SCO Unix).

Setting up the security features - Security Menu

You can set up the following security features in the *Security* menu:

- Protecting BIOS Setup (in the field marked *Set Setup Password*)
- Protecting BIOS of add-on modules (in the field marked *Setup Password Lock*)
- Protecting system boots (in the field marked *Set System Password*)
- Locking input devices (in the field marked *System Password Mode*)
- Prevention of system boots from floppy disk (in the field marked *System Load*)
- Prevention of write operations to floppy disk (in the field marked *Diskette Write*)
- Write protection for BIOS Setup Flash chip (in the field marked *Flash Write*)
- Switching off by software (in the field marked *Soft Power Off*)
- Remote Power On (in the field marked *Remote Power On*)

Example for the *Security* menu

Setup Password / System Password

These fields indicate whether the appropriate password is installed or not.

Set Setup Password

This field enables you to install the setup password. The setup password prevents unauthorized callup of the *BIOS setup*.

Mark the field and press the Return key. You can then enter and confirm the setup password (see also the PC Operating Manual).

Setup Password Lock

specifies the effect of the Setup Password. The setting in this field takes effect as soon as a Setup Password has been installed.

Standard Setup Password prevents unauthorized calls of the *BIOS Setup*. (Default entry).

Extended The Setup Password prevents unauthorized calls of the *BIOS Setup* and locks the keyboard when the PC is initialized. This prevents unauthorized access to settings for installed boards with a BIOS of their own. Access to the BIOS of the board is only possible if the Setup Password is entered during board initialization. No prompt to enter the password appears on screen.

System Password - Set System Password

Condition: the setup password must be installed.

This field enables you to install the system password. The system password prevents unauthorized callup of the system.

Mark the field and press the Return key. You can then enter and confirm the system password (see also the PC Operating Manual).

System Password Mode

specifies the effect of the system password. The setting in this field becomes effective as soon as a system password is installed.

System When the PC is started, the system password enables the operating system to be booted (default entry).

Keyboard When the PC is started, the operating system is booted and the keyboard and mouse are locked. The system password unlocks the keyboard and mouse.

 No prompt to enter the password appears on screen.

System Load

This field specifies the drive from which the operating system can be loaded.

Standard The operating system can be loaded from floppy disk or hard disk (default entry).

Diskette Lock The operating system can only be loaded from hard disk.

Setup Prompt

This field specifies whether the message `Press F2 to enter SETUP` is displayed when the PC is rebooted.

Enabled The message `Press F2 to enter SETUP` is displayed when the system is started (default entry).

Disabled The message is not displayed.

Write protection for floppy disk drive - Diskette Write

This field is used to define whether floppy disks can be written or deleted in the floppy disk drive.

Enabled Read, write and delete floppy disks is possible, if the switch 6 of the switch block is set to *OPEN* (default setting).

Disabled Floppy disks can only be read.

Write protection for System BIOS - Flash Write

This field can assign write protection to the System BIOS.

Enabled The System BIOS can be written to or deleted, provided switch 5 of the switch block is set to *OPEN*. BIOS update from floppy disk is possible (default entry).

Disabled The System BIOS can neither be written to nor deleted. BIOS update from floppy disk is not possible

Soft Power Off

This field specifies whether the PC can be switched off with a program (e.g. SWOFF).

Enabled The PC can be switched off with a program (default entry).

Disabled The PC cannot be switched off with a program.

Remote Power On

specifies whether the PC can be switched on from an external device (e.g. fax).

Enabled The PC can be switched on from an external device (default entry).

Disabled The PC cannot be switched on from an external device.

Set Server Management - Server Menu

You can set the following functions in the *Server* menu:

- Server management mode (in the field marked *Server Management*)
- Boot timeout of the operating system (in the field marked *O/S Boot Timeout*)
- Boot delay (in the field marked *ASR&R Boot Delay*)
- Number of attempts to boot the operating system (in the field marked *Boot Retry Counter*)
- Diagnostic system (in the field marked *Start Diagnostic System*)
- Time monitoring (in the field marked *Hardware Watchdog*)
- Processor status (in the fields marked *CPU 0 Status* and *CPU 1 Status*)
- Error transmission (in the field marked *Pager Configuration*)
- VT100 functionality (in the field marked *VT100 Configuration*)

Example for the *Server* menu

Server Management

specifies the operating mode of the server management BIOS.

Enabled Activates the server management functionality of the system BIOS. This setting is required to enable a server management process of the operating system to communicate with the system BIOS (default entry).

Disabled The server management functionality is deactivated.

O/S Boot Timeout

Condition: Novell NetWare or Windows NT operating system, ServerMan program

O/S Boot Timeout specifies whether a system reboot is performed when the operating system is not able to establish a connection with the server management BIOS within a defined period after system booting. The server management BIOS assumes that there is a boot error and initiates a reboot.

If the operating system does not have a server management process, you must select the setting *Disabled* so that the server management BIOS does not erroneously initiate a reboot. The server management process (agent) is installed using the *ServerMan* program.

2 min, 5 min, 15 min, 30 min, 60 min, 120 min, 240 min

After the displayed timeout period has expired, the system is rebooted if no connection with a server management process has been established.

Disabled No timeout takes place (default entry).

ASR&R Boot Delay

Condition: *Enabled* must be set in the *Server Management* field.

Specifies the boot delay after shutdown due to a fault (e.g. excessively high temperature). The system is rebooted after the set wait period has expired (default entry: *3 min*).

Further possible values are: *1 min, 2 min, 5 min, 7 min, 10 min, 15 min* and *20 min*

Boot Retry Counter

Condition: *Enabled* must be set in the *Server Management* field.

Specifies the maximum number of attempts to boot the operating system. After the time set in *O/S Boot Timeout* has expired, each failed retry is followed by a system reboot. Other critical system errors also result in system reboot and in counter decrementing. After the last retry the system is definitively shut down or a diagnostic system started (if still possible and *Enabled*).

0 to 7 Number of possible retries (default entry: *3*).

Start Diagnostic System

Condition: *Enabled* must be set in the *Server Management* field.

Specifies what is to happen after the number of system reboots defined in *Boot Retry Counter*.

Enabled The test and diagnostic system is started from the first IDE hard disk drive.

Disabled The test and diagnostic system is not started (default entry).

Hardware Watchdog

Condition: *Enabled* must be set in the *Server Management* field.

Specifies whether the system performs a reboot if the server management BIOS cannot reset a hardware counter at defined time intervals (system hangs).

Enabled System reboot is performed after the time interval has passed (default entry).

Disabled No system reboot is performed after the time interval has passed.

CPU 0 Status / CPU 1 Status

Condition: two processors must be installed.

Specifies if the processor can be used or not. You should disable a processor only if it has reported an internal malfunction. The malfunction is indicated in the error log that you can view using the *SCU* or *ServerMan* program.

Enabled The processor can be used by the operating system (default entry).

Disabled The processor cannot be used by the operating system.

i Even if only one processor is installed, both statuses are always displayed (*CPU 0 Status* and *CPU 1 Status*).

Pager Configuration

calls the submenu in which you can make the settings for remote transmission of errors by means of a pager. The server management BIOS can send a message (server number) via an attached modem (external: serial 1, serial 2; internal: modem board) to a pager if a system error occurs. Further settings for remote error transmission must be made by a server management process of the operating system or using *SCU*. The telephone number of the pager server, the subscriber number and the modem initialization sequences can also be entered there.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd. Server	
Pager Configuration	Item Specific Help
Pager: [Disabled] Pager Interface Addr.: 3E8h Server Number: [0] Baud Rate: 2400 Com. Setting: 8/1, No Parity	
F1 Help ↓ Select Item -/+ Change Values F9 Setup Defaults ESC Exit ←→ Select Menu Enter Select ► Sub-Menu F7 Previous Values	

Example for the submenu *Pager Configuration*

Pager

enables or disables the pager.

Enabled In the event of an error a message (server number) is sent to a pager. A modem must be attached that can be accessed at the address set in the field *Pager Interface Addr.*.

Disabled In the event of an error no message is sent to a pager (default entry).

The modem board must be set so that it can be accessed via the pager interface address (see documentation on the modem board). On external modems attached via *Serial 1* or *Serial 2*, the pager interface address must correspond to the setting for *Serial 1* or *Serial 2* on the screen page *Advanced*.

Pager Interface Addr.

Condition: *Enabled* must be set in the field *Pager*.

Defines the I/O address used to communicate with the modem via a serial interface.

3F8h, 2F8h, 3E8, 2E8h

The specified I/O address is used for communication with the modem. The serial port at which the modem is attached must be set to the same address (default entry: *3E8h*).

Server Number

Condition: *Enabled* must be set in the field *Pager*.

Specifies the number used to uniquely identify the server in a pager message.

0 to 65535 Identification number of the server (default entry: *0*)

Baud Rate

Condition: *Enabled* must be set in the field *Pager*.

Indicates the baud rate of the serial port at which the modem for remote error transmission is attached.

2400 Error transmission is performed at 2400 baud. This value cannot be changed.

Com. Setting

Condition: *Enabled* must be set in the field *Pager*.

Indicates the data format used for error transmission.

8/1, No Parity Error transmission is performed with 8 data bits, 1 stop bit and without a parity check. The values cannot be changed.

VT100 Configuration

calls the submenu in which you make the settings for operating a VT100-compatible terminal on the system. A terminal can be connected directly at the server system via a serial port; screen output can be directed to this terminal in parallel to the attached monitor. Keyboard input at the terminal is likewise sent to the system and treated like input at the attached server keyboard. The BIOS setup of the system, for example, can be called up and modified at the terminal.

It is not possible to enter a system password in *Keyboard Mode* at the VT100 terminal.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd.

F1 Help	↓ Select Item -/+ Change Values F9 Setup Defaults ESC Exit ←→ Select Menu Enter Select ► Sub-Menu F7 Previous Values

Example for submenu *VT100 Configuration*

VT100

enables or disables VT100 operating mode.

Enabled VT100 operating mode is enabled.

Disabled VT100 operating mode is disabled (default entry).

VT100 Interface Addr.

Condition: *Enabled* must be set in the field *VT100*.

Defines the I/O address for communication with the terminal.

3F8h, 2F8h, 3E8, 2E8h

The specified I/O address is used for communication with the terminal. The serial port at which the terminal is connected must be set to the same address (default entry: *3F8h*).

VT100 IRQ

Condition: *Enabled* must be set in the field *VT100*.

Defines the interrupt for communication with the terminal.

IRQ3, IRQ4, IRQ5, IRQ6, IRQ7

The specified IRQ is used for communication with the terminal. The serial port at which the terminal is connected must be set to the same IRQ (default entry: *IRQ3*).

Baud Rate

Condition: *Enabled* must be set in the field *VT100*.

Specifies the baud rate for communication with the terminal.

1200, 2400, 4800, 9600, 19200

Data communication with the terminal is performed at the rate set (default entry: *9600*).

Com. Setting

Condition: *Enabled* must be set in the field *VT100*.

Indicates the data format used for terminal emulation.

8/1, No Parity The connection is established with 8 data bits, 1 stop bit and without a parity check. The values cannot be changed.

Exiting BIOS Setup - Exit menu

In the *Exit* menu, you can save your settings and exit BIOS Setup.

Phoenix BIOS Setup Copyright 1985-95 Phoenix Technologies Ltd.			
Main	Advanced	Security	Server Exit
Save Changes & Exit Discard Changes & Exit Get Default Values Load Previous Values Save Changes		Item Specific Help	
F1 Help ESC Exit	↓ Select Item ←→ Select Menu	-/+ Change Values Enter Select ▶ Sub-Menu	F9 Setup Defaults F7 Previous Values

Example for menu *Exit*

Save Changes & Exit

saves the settings you have made and exits BIOS Setup.

Discard Changes & Exit

exits BIOS Setup without saving the new settings.

Get Default Values

reverts all settings to the default values.

Load Previous Values

sets the values which were in effect when BIOS Setup was called.

Save Changes

saves the settings you have made without exiting the BIOS Setup.

Settings on the system board

- X400 = Processor type
- S600/1 = System BIOS recovery
- S600/2 = Password protection for BIOS setup
- S600/3 = for future use
- S600/4 = for future use
- S600/5 = System BIOS write-protection
- S600/6 = Floppy disk write-protection
- S600/7 = reserved (do not change setting *OPEN*)
- S600/8 = for future use

Settings on the system board

Setting processor type - Jumper X400

The setting depends on the processor

The jumpers may only be set as specified in the table below for the particular processor used.

processor	jumper 1 - 2	jumper 3 - 4	jumper 5 - 6	jumper 7 - 8
100 MHz	not inserted	inserted	not inserted	not inserted
P54C 133 MHz	not inserted	inserted	inserted	not inserted
P54C 166 MHz	not inserted	inserted	inserted	inserted

System BIOS recovery - Switch 1

Switch 1 in switch block S600 permits recovery of the system BIOS after an errored update. To recover the BIOS you need a "recovery diskette" (please contact our customer service).

OPEN The system boots with the system BIOS of the system board (default entry).

ON The system boots from the recovery diskette in drive A. Recovery of the system BIOS is performed.

If switch 1 is set to *ON*, the setting of switch 5 has no relevance.

Write protection for system BIOS - Switch 5

Switch 5 in switch block S600 permits or prevents an update of the system BIOS. In order to perform an update of the system BIOS, the write protection for the system BIOS must also be removed in the *BIOS-Setup* (in the *Security* menu set the field for *Flash Write to Enabled*). Please contact our customer service if you want to perform a BIOS update.

OPEN The system BIOS can be overwritten (default entry).

ON The system BIOS is write-protected.

Write protection for floppy disk drive - Switch 6

Switch 6 specifies whether floppy disks can be written and deleted in the diskette drive when the write protection for the drive has been removed in the *BIOS-Setup* (in the *Security* menu set the field for *Diskette Write to Enabled*).

OPEN Floppy disks can be read, written and deleted (default entry).

ON Write protection for the diskette drive is active.

Switch 3, 4, 7 and 8

The switch 7 in the switch block S600 is reserved. Do not change the setting (*OPEN*)! The switches 3, 4 and 8 are for future use.

Add-on modules on the system board

- | | |
|--|--|
| 1 = Locations bank 3 for main memory | 7 = First processor/OverDrive processor |
| 2 = Locations bank 2 for main memory | 8 = Voltage converter |
| 3 = Locations bank 1 for main memory | 9 = Lithium battery |
| 4 = Locations bank 0 for main memory | 10 = Flash BIOS |
| 5 = Location for second-level cache module | 11 = EISA slots (from below: 1, 2, 3, 4) |
| 6 = Second processor (optional) | 12 = PCI slots (from above: 1, 2, 3, 4) |

Upgrading main memory

The system board has eight slots for memory modules, divided into four memory banks (bank 0 to bank 3). Memory modules of 4, 8, 16, 32 and 64 Mbytes can be used for expanding memory. A memory bank must always be complete and equipped with modules of the same capacity. In other words, a memory bank may have a capacity of 8, 16, 32, 64 or 128 Mbytes and a maximum capacity of 512 Mbytes. Only fast memory modules with an access time of 70 ns or less may be used. The equipping sequence of the four memory banks is arbitrary, i.e. there may be unequipped banks between equipped banks.

i The EISA configuration program (ECU) must be run after a change of memory configuration, and the new configuration must be saved.

Installing memory modules

- ▶ Insert the memory module at an angle into the appropriate location (1). Ensure that the key notch and the two holes are correctly aligned with the retaining pins.
- ▶ Tilt the memory module upwards until it snaps into place vertically (2).

Removing a memory module

- ▶ Carefully push the retaining clips at each end of the module outwards (1).
- ▶ Tilt the memory module to the side (2) and withdraw it at an angle from the location (3).

Replacing the processor

The system board can be upgraded with a faster standard processor, with a second processor or with an OverDrive processor.

- 

The second processor must have the same clock rate as the first. A suitable multiprocessor operating system must be used if dual operation is required.

The second processor is installed in the free socket provided.

The OverDrive processor is installed in the socket for the first processor after removing the old processor. The OverDrive processor cannot be operated with a second processor (dual mode). A second processor must therefore be removed before using the OverDrive processor.

- ▶ Push the lever in the direction of the arrow (1) and lift it as far as it will go (2).
- ▶ If you replace one processor by another, disconnect the connector of the temperature monitoring unit of the processor from the system board and lift the processor out of its socket (3).
- ▶ Insert the new processor in the socket so that the mark on the upper side of the processor matches the mark (A) on the socket (4).

- 

The mark on the processor may be covered by a heat sink. In this case let yourself be guided by the marking in the rows of pins on the underside of the processor.

- ▶ Push the lever back down so that it snaps into place (5).
- ▶ Reconnect the connector of the temperature monitoring unit of the processor to the system board.
- ▶ Insert the jumpers in jumper block X400 as required by the installed processor.

Upgrading the Second-level cache

The system board has a socket for second-level cache. You can install a second-level cache module with 512 Kbytes.

1 = Installing second-level cache

2 = Removing second-level cache

- ▶ Insert the second-level cache module into the mounting location, making sure it snaps into place (1).

In order to make best use of the second-level cache, you must set the *Cache* field in the *Advanced / Cache Memory* menu of the *BIOS-Setup* to *Intern And Extern*. You can enhance the performance in the same menu by setting the fields for *Cache System BIOS Area* and *Cache Video BIOS Area* to *Enabled*, and copying ROM parts into the cache with *Cache Memory Regions*.

Removing second-level cache modules

- ▶ Pull the second-level cache module out of the mounting location in the direction of the arrow.

Replacing the lithium battery

Incorrect replacement of the lithium battery may lead to a risk of explosion.

The lithium battery must be replaced with an identical battery or a battery type recommended by the manufacturer (CR2032).

Do not throw lithium batteries into the trashcan. Your vendor or dealer or their authorized representatives will take used batteries back free of charge so that they can be recycled or disposed of in the proper manner.

Make sure that you insert the battery the right way round. The plus pole must be on the top!

- ▶ Lift the contact (1) a few millimeters and remove the battery from its socket (2).
- ▶ Insert a new lithium battery of the same type in the socket (3).
- ▶ Set the date and the time in the BIOS setup.

Error messages

This chapter contains error messages generated by the system board.

nn Stuck Key

Release the key on the keyboard (nn is the hexadecimal code for the key).

Diskette drive A error

Diskette drive B error

Check the entry for the diskette drive in the *Main* menu and the entry for the diskette drive controller in the *Advanced - Peripheral Configuration* menu of the *BIOS Setup*. Check the connections to the diskette drive.

Extended RAM Failed at offset: nnnn

Failing Bits: nnnn

System RAM Failed at offset: nnnn

Switch the PC off and on again. If the message is still displayed, please contact your sales office or customer service.

Failure Fixed Disk 0

Failure Fixed Disk 1

Fixed Disk Controller Failure

Check the entry for the hard disk drive in the *Main* menu and the entry for the IDE hard disk controller in the *Advanced - Peripheral Configuration* menu of the *BIOS Setup*. Check the connections to the hard disk drive.

Fail Safe Timer NMI

Software NMI

Expansion Board was disabled

Switch the system off and check that the EISA boards are firmly seated and functioning correctly. If this message appears each time you switch the system on, please contact your sales office or customer service.

Incorrect Drive A - run SETUP

Incorrect Drive B - run SETUP

Correct the entry for the diskette drive in the *Main* menu of the *BIOS Setup*.

Error messages

Invalid configuration information

Invalid EISA configuration storage

Configuration error for slot

In the *Advanced* menu of the *BIOS-Setup* set the entry for *Reset Configuration Data* to *Yes*. Start the EISA configuration program (ECU) and reconfigure the system. If this message continues to appear each time you switch the system on, please contact your sales office or customer service.

Invalid NVRAM media type

Switch the PC off and on again. If the message is still displayed, please contact your sales office or customer service.

Keyboard controller error

Connect another keyboard. If the message is still displayed, please contact your sales office or customer service.

Keyboard error

Check that the keyboard is connected properly.

Monitor type does not match CMOS - RUN SETUP

Correct the entry for the monitor type in the *Main* menu of the *BIOS Setup*.

Operating system not found

Check the entry for the hard disk drive and the diskette drive in the *Main* menu of the *BIOS Setup*.

Parity Check 1

Parity Check 2

Switch the PC off and on again. If the message is still displayed, please contact your sales office or customer service.

Previous boot incomplete - Default configuration used

By pressing function key **F2** you can check and correct the settings in *BIOS Setup*. By pressing function key **F1** the PC starts with incomplete system configuration. If the message is still displayed, please contact your sales office or customer service.

Real time clock error

Call the *BIOS Setup* and enter the correct time in the *Main* menu. If the message is still displayed, please contact your sales office or customer service.

System battery is dead - Replace and run SETUP

Replace the lithium battery on the system module and redo the settings in the BIOS Setup.

System Cache Error - Cache disabled

Switch the PC off and on again. If the message is still displayed, please contact your sales office or customer service.

System CMOS checksum bad - run SETUP

Call the *BIOS Setup* and correct the previously made entries or set the default entries.

System timer error

Switch the PC off and on again. If the message is still displayed, please contact your sales office or customer service.

Messages d'erreur

Ce chapitre vous donne les messages d'erreur générés par le BIOS du système.

nn Stuck Key

Libérez la touche du clavier (*nn* est le code hexadécimal de cette touche).

Diskette drive A error

Diskette drive B error

Vérifiez dans le menu *Main* du *BIOS setup* l'entrée correspondant au lecteur de disquettes et dans le menu *Advanced - Peripheral Configuration* du *BIOS setup* l'entrée correspondant au contrôleur du lecteur de disquettes. Vérifiez les connecteurs du lecteur de disquettes.

Extended RAM Failed at offset: nnnn

Failing Bits: nnnn

System RAM Failed at offset: nnnn

Redémarrez votre PC. Si le message réapparaît, adressez-vous à votre revendeur ou à notre S.A.V.

Fixed Disk 0 Failure

Fixed Disk 1 Failure

Fixed Disk Controller Failure

Vérifiez dans le menu *Main* du *BIOS setup* l'entrée correspondant au lecteur de disque dur et dans le menu *Advanced - Peripheral Configuration* du *BIOS setup* l'entrée correspondant au contrôleur du lecteur de disque dur IDE. Vérifiez les connecteurs du lecteur de disquettes.

Fail Safe Timer NMI

Software NMI

Expansion Board was disabled

Mettez le système hors tension et vérifiez que les modules EISA fonctionnent correctement et sont bien connectés. Si ce message apparaît chaque fois que vous démarrez votre PC, adressez-vous à votre revendeur ou à notre S.A.V.

Incorrect Drive A - run Setup

Incorrect Drive B - run Setup

Entrez dans le menu *Main* du *BIOS setup* et paramétrez correctement l'entrée correspondant au lecteur de disquettes.

Messages d'erreur

Invalid configuration information
Invalid EISA configuration storage
Configuration error for slot

Pour l'entrée *Reset Configuration Data* du menu *Advanced* du *BIOS setup*, activez le paramètre *Yes*. Chargez le programme de configuration EISA (ECU) et reconfigurez le système. Si ce message apparaît encore chaque fois que vous démarrez votre PC, adressez-vous à votre revendeur ou à notre S.A.V.

Invalid NVRAM media type

Redémarrez votre PC. Si le message réapparaît, adressez-vous à votre revendeur ou à notre S.A.V.

Keyboard controller error

Connectez un autre clavier. Si le message réapparaît, adressez-vous à votre revendeur ou à notre S.A.V.

Keyboard error

Assurez-vous que le clavier est correctement connecté.

Monitor type does not match CMOS - RUN SETUP

Entrez dans le menu *Main* du *BIOS setup* et paramétrez correctement l'entrée correspondant au type d'écran.

Operating system not found

Vérifiez dans le menu *Main* du *BIOS setup* les entrées correspondant au lecteur de disque dur et au lecteur de disquettes.

Parity Check 1

Parity Check 2

Redémarrez votre PC. Si le message réapparaît, adressez-vous à votre revendeur ou à notre S.A.V.

Previous boot incomplete - Default configuration used

Appuyez la touche de fonction **F2** pour vérifier et corriger les valeurs dans *BIOS Setup*. Si vous appuyez la touche de fonction **F1** le PC démarre en configuration incomplète. Si le message réapparaît, adressez-vous à votre revendeur ou à notre S.A.V.

Real time clock error

Appelez le *BIOS setup* et entrez l'heure exacte dans le menu *Main*. Si le message réapparaît, adressez-vous à votre revendeur ou à notre S.A.V.

Messages d'erreur

System battery is dead - Replace and run SETUP

Remplacez la batterie au lithium sur la carte système et procédez à de nouveaux réglages dans le *BIOS setup*.

System Cache Error - Cache disabled

Redémarrez votre PC. Si le message réapparaît, adressez-vous à votre revendeur ou à notre S.A.V.

System CMOS checksum bad - run SETUP

Appelez le *BIOS setup* et corrigez les réglages effectués en dernier lieu ou activez les réglages standard.

System timer error

Redémarrez votre PC. Si le message réapparaît, adressez-vous à votre revendeur ou à notre S.A.V.

Mensajes de error

Aquí se describen los mensajes de error que son generados por el BIOS-Setup.

nn Stuck Key

Desbloquee la tecla del teclado (*nn* es el código hexadecimal para la tecla).

Diskette drive A error

Diskette drive B error

En el menú *Main* del *BIOS-Setup* verifique el valor correspondiente a la unidad de disquete y en el menú *Advanced - Peripheral Configuration* el valor para el controlador de la unidad de disquete. Controle las conexiones de la unidad de disquete.

Extended RAM Failed at offset: nnnn

Failing Bits: nnnn

System RAM Failed at offset: nnnn

Arranque de nuevo el PC. Si sigue visualizándose este mensaje, diríjase a su distribuidor o a nuestro servicio de postventa.

Fixed Disk 0 Failure

Fixed Disk 1 Failure

Fixed Disk Controller Failure

En el menú *Main* del *BIOS-Setup* verifique los valores para la unidad de disco duro y en el menú *Advanced - Peripheral Configuration* el valor para el controlador de unidad IDE. Controle las conexiones y los puentes de la unidad de disco duro.

Fail Safe Timer NMI

Software NMI

Expansion Board was disabled

Desconecte el sistema y verifique si los módulos EISA funcionan y han sido conectados correctamente. Si aparece este mensaje cada vez que conecta el sistema, diríjase a su distribuidor o al servicio de postventa.

Incorrect Drive A - run Setup

Incorrect Drive B - run Setup

Defina correctamente el registro de la unidad de disquete en el menú principal del *BIOS-Setup*.

Invalid configuration information

Invalid EISA configuration storage

Configuration error for slot

En el menú *Advanced* del *BIOS-Setup* ajuste el valor *Yes* para *Reset Configuration Data*. Arranque el programa de configuración EISA (ECU) y configure de nuevo su sistema. Si sigue visualizándose este mensaje cada vez que arranca su sistema, diríjase a su distribuidor o a nuestro servicio de postventa.

Invalid NVRAM media type

Arranque de nuevo el PC. Si sigue visualizándose este mensaje, diríjase a su distribuidor o a nuestro servicio de postventa.

Keyboard controller error

Conecte otro teclado. Si sigue visualizándose este mensaje, diríjase a su distribuidor o a nuestro servicio de postventa.

Keyboard error

Compruebe si el teclado está conectado correctamente.

Monitor type does not match CMOS - RUN SETUP

Defina correctamente en el menú principal del *BIOS-Setup* el registro para el tipo de pantalla..

Operating system not found

Compruebe en el menú principal del *BIOS-Setup* los registros de la unidad de disco duro y de la unidad de disquete.

Parity Check 1

Parity Check 2

Arranque de nuevo el PC. Si sigue visualizándose este mensaje, diríjase a su distribuidor o a nuestro servicio de postventa.

Previous boot incomplete - Default configuration used

Pulsando la tecla **F2** puede verificar y corregir los registros del BIOS-Setup. Pulsando la tecla **F1**, el sistema arranca con la configuración incompleta. Si sigue visualizándose este mensaje, diríjase a su distribuidor o a nuestro servicio de postventa.

Real time clock error

Active el *BIOS-Setup* y registre la hora correcta en el menú principal (*Main*). Si sigue visualizándose este mensaje, diríjase a su distribuidor o a nuestro servicio de postventa..

System battery is dead - Replace and run SETUP

Sustituya la pila de litio en el módulo de sistema y repita las operaciones de ajuste en el *BIOS-Setup*..

System Cache Error - Cache disabled

Arranque de nuevo el PC. Si sigue visualizándose este mensaje, diríjase a su distribuidor o a nuestro servicio de postventa.

System CMOS checksum bad - run SETUP

Active el *BIOS-Setup* y corrija los últimos registros hechos o ajuste los registros estándar.

System timer error

Arranque de nuevo el PC. Si sigue visualizándose este mensaje, diríjase a su distribuidor o a nuestro servicio de postventa.

Messaggi di errore

I messaggi di errore emessi dal system BIOS sono descritti qui in seguito.

nn Stuck Key

Liberate il tasto dalla tastiera (*nn* indica il codice esadecimale del tasto).

Diskette drive A error

Diskette drive B error

Controllate nel *BIOS-Setup*, menu *Main*, il valore indicato per il drive dei dischetti e nel menu *Advanced - Peripheral Configuration* il valore per il controller del drive dei dischetti. Controllate i collegamenti del drive per dischetti.

Extended RAM Failed at offset: nnnn

Failing Bits: nnnn

System RAM Failed at offset: nnnn

Riavviate nuovamente il PC. Se il messaggio ricompare rivolgetevi al Vostro rivenditore o al nostro servizio di assistenza tecnica..

Fixed Disk 0 Failure

Fixed Disk 1 Failure

Fixed Disk Controller Failure

Controllate nel *BIOS-Setup*, menu *Main*, i valori per il drive del disco fisso e nel menu *Advanced - Peripheral Configuration* il valore per il controller del driver IDE. Controllate i collegamenti ed i ponticelli del drive del disco fisso.

Fail Safe Timer NMI

Software NMI

Expansion Board was disabled

Spegnete il sistema e verificate che i componenti EISA funzionino e siano collegati in modo corretto. Se questo messaggio compare dopo l'accensione, rivolgetevi al Vostro rivenditore o al nostro servizio di assistenza tecnica.

Incorrect Drive A - run Setup

Incorrect Drive B - run Setup

Impostate nel *BIOS-Setup* del menu principale (*Main*) il valore corretto per il drive per dischetti.

Messaggi di errore

Invalid configuration information
Invalid EISA configuration storage
Configuration error for slot

Impostate nel *BIOS-Setup* del menu *Advanced* il valore per *Reset Configuration Data* su *Yes*. Avviate il programma di configurazione EISA (ECU) e riconfigurate il sistema. Se questo messaggio continuo ad venir visualizzato dopol'accensione, rivolgetevi al Vostro rivenditore oppure al nostro servizio di assistenza tecnica.

Invalid NVRAM media type

Riavviate nuovamente il PC. Se il messaggio ricompare rivolgetevi al Vostro rivenditore o al nostro servizio di assistenza tecnica.

Keyboard controller error

Collegate un'altra tastiera. Se il messaggio ricompare rivolgetevi al Vostro rivenditore o al nostro servizio di assistenza tecnica.

Keyboard error

Controllate che la tastiera sia collegata correttamente.

Monitor type does not match CMOS - RUN SETUP

Impostate nel *BIOS-Setup* del menu principale (*Main*) il valore corretto per il tipo di monitor.

Operating system not found

Controllate nel *BIOS-Setup* del menu principale i valori indicati per il drive per il disco rigido e per il drive per dischetti.

Parity Check 1

Parity Check 2

Riavviate nuovamente il PC. Se il messaggio ricompare rivolgetevi al Vostro rivenditore o al nostro servizio di assistenza tecnica.

Previous boot incomplete - Default configuration used

Premendo il tasto funzione **[F2]** potete verificare e correggere le impostazioni nel *BIOS-Setup*. Premendo il tasto funzione **[F1]**, il PC viene avviato con la configurazione di sistema completa. Se il messaggio ricompare rivolgetevi al Vostro rivenditore o al nostro servizio di assistenza tecnica.

Real time clock error

Richiamate il *BIOS-Setup* ed inserite nel menu principale (*Main*) l'ora esatta. Se il messaggio ricompare rivolgetevi al Vostro rivenditore o al nostro servizio di assistenza tecnica.

Messaggi di errore

System battery is dead - Replace and run SETUP

Sostituite la batteria al litio dell'unità di sistema ed inserite nuovamente i valori di impostazione nel *BIOS-Setup*.

System Cache Error - Cache disabled

Riavviate nuovamente il PC. Se il messaggio ricompare rivolgetevi al Vostro rivenditore o al nostro servizio di assistenza tecnica..

System CMOS checksum bad - run SETUP

Richiamate il *BIOS-Setup* e correggete gli ultimi valori impostati oppure indicati i valori standard.

System timer error

Riavviate nuovamente il PC. Se il messaggio ricompare rivolgetevi al Vostro rivenditore o al nostro servizio di assistenza tecnica.

Felmeddelanden

Nedan beskrivs de felmeddelanden som system-BIOS matar ut på systemkomponenten.

nn Stuck Key

Frigör den angivna tangenten (*nn* är tangentens hexadecimalkod).

Diskette drive A error

Diskette drive B error

Kontrollera inställningarna för diskettenheten i menyn *Main* i *BIOS-Setup*-menyn och inställningarna för diskettenhets-controllern i menyn *Advanced - Peripheral Configuration*. Kontrollera att diskettenheten är korrekt ansluten.

Extended RAM Failed at offset: nnnn

Failing Bits: nnnn

System RAM Failed at offset: nnnn

Starta upp PCn på nytt. Om meddelandet fortfarande visas bör du kontakta din återförsäljare eller vår kundservice.

Fixed Disk 0 Failure

Fixed Disk 1 Failure

Fixed Disk Controller Failure

Kontrollera inställningarna för hårddiskenheten i menyn *Main* i *BIOS-Setup*-menyn och inställningarna för IDE-drivenhets-controllern i menyn *Advanced - Peripheral Configuration*. Kontrollera hårddiskenhetens kontakter och kopplingspaneler.

Fail Safe Timer NMI

Software NMI

Expansion Board was disabled

Stäng av systemet och kontrollera att EISA-komponenterna fungerar och är korrekt anslutna. Om detta meddelande visas varje gång maskinen sätts på, bör du kontakta din återförsäljare eller vår kundservice.

Incorrect Drive A - run Setup

Incorrect Drive B - run Setup

Korriger inställningen för diskettenheten i menyn *Main* i *BIOS-Setup*-menyn.

Invalid configuration information

Invalid EISA configuration storage

Configuration error for slot

Ställ in värdet *Yes* för *Reset Configuration Data* i menyn *Advanced* i *BIOS-Setup*-menyn. Starta EISA-konfigurationsprogrammet (ECU), och konfigurera om systemet på nytt. Om detta meddelande visas varje gång maskinen sätts på, bör du kontakta din återförsäljare eller vår kundservice.

Invalid NVRAM media type

Starta upp PCn på nytt. Om meddelandet fortfarande visas bör du kontakta din återförsäljare eller vår kundservice.

Keyboard controller error

Anslut ett annat tangentbord. Om meddelandet fortfarande visas bör du kontakta din återförsäljare eller vår kundservice.

Keyboard error

Kontrollera att tangentbordet är korrekt anslutet.

Monitor type does not match CMOS - RUN SETUP

Korriger inställningarna för bildskärmtypen i menyn *Main* i *BIOS-Setup*-menyn.

Operating system not found

Kontrollera inställningarna för hårddisken och diskettenheten i menyn *Main* i *BIOS-Setup*-menyn.

Parity Check 1

Parity Check 2

Starta upp PCn på nytt. Om meddelandet fortfarande visas bör du kontakta din återförsäljare eller vår kundservice.

Previous boot incomplete - Default configuration used

Om du trycker på funktionstangenten **F2**, kan du kontrollera och korriger inställningarna i *BIOS-Setup*. Om du trycker på funktionstangenten **F1** startas PCn med den ofullständiga systemkonfigurationen. Om meddelandet fortfarande visas bör du kontakta din återförsäljare eller vår kundservice.

Real time clock error

Ropa upp *BIOS-Setup*-menyn och ställ in korrekt klockslag i menyn *Main*. Om meddelandet fortfarande visas bör du kontakta din återförsäljare eller vår kundservice..

System battery is dead - Replace and run SETUP

Byt ut litiumbatteriet på systemkomponenten och genomför inställningarna i *BIOS-Setup*-menyn på nytt.

System Cache Error - Cache disabled

Starta upp PCn på nytt. Om meddelandet fortfarande visas bör du kontakta din återförsäljare eller vår kundservice.

System CMOS checksum bad - run SETUP

Ropa upp *BIOS-Setup*-menyn. Korrigera de senast gjorda inställningarna eller ställ in standardvärdena igen.

System timer error

Starta upp PCn på nytt. Om meddelandet fortfarande visas bör du kontakta din återförsäljare eller vår kundservice.

Foutmeldingen

Vervolgens worden de foutmeldingen beschreven die het BIOS-systeem op de systeembouwgroep geeft.

nn Stuck Key

Laat de toets van het toetsenbord los (*nn* is de hexadecimale code voor de toets).

Diskette drive A error

Diskette drive B error

Controleer in de *BIOS-Setup*, in het menu *Main*, de instelling voor het diskteststation en in het menu *Advanced - Peripheral Configuration* de instelling voor de diskteststation-controller. Controleer de aansluitingen van het diskteststation.

Extended RAM Failed at offset: nnnn

Failing Bits: nnnn

System RAM Failed at offset: nnnn

Start de PC opnieuw. Als de melding opnieuw verschijnt, neem dan a.u.b. contact op met uw dealer of met onze klantendienst..

Fixed Disk 0 Failure

Fixed Disk 1 Failure

Fixed Disk Controller Failure

Controleer in de *BIOS-Setup*, in het menu *Main*, de instellingen voor de harde schijf en in het menu *Advanced - Peripheral Configuration* de instelling voor de IDE-controller. Controleer de aansluitingen en de doorverbindingen van de harde schijf.

Fail Safe Timer NMI

Software NMI

Expansion Board was disabled

Schakel het systeem uit en ga na of de EISA-modules goed werken en goed zijn verbonden. Als deze melding altijd verschijnt als het systeem wordt ingeschakeld, moet u contact opnemen met uw verkoper of met onze klantendienst.

Incorrect Drive A - run Setup

Incorrect Drive B - run Setup

Stel in de setup van het *BIOS*, in het menu *Main*, het diskteststation op de juiste wijze in.

Foutmeldingen

Invalid configuration information
Invalid EISA configuration storage
Configuration error for slot

Zet in de *BIOS-Setup* in het menu *Advanced* de instelling voor *Reset Configuration Data* op *Yes*. Start het EISA-configuratieprogramma (FCU) en configureer het systeem opnieuw. Als deze melding weer verschijnt telkens het systeem wordt ingeschakeld, moet u contact opnemen met uw verkoper of met onze klantendienst..

Invalid NVRAM media type

Start de PC opnieuw. Als de melding opnieuw verschijnt, neem dan a.u.b. contact op met uw dealer of met onze klantendienst.

Keyboard controller error

Sluit een ander toetsenbord aan. Als de melding opnieuw verschijnt, neem dan contact op met uw dealer of met onze klantendienst.

Keyboard error

Controleer of het toetsenbord goed is aangesloten.

Monitor type does not match CMOS - RUN SETUP

Stel in de setup van het *BIOS*, in het menu *Main*, het monitortype op de juiste wijze in.

Operating system not found

Controleer in de setup van het *BIOS*, in het menu *Main*, de instellingen van de harde schijf en het diskettestation..

Parity Check 1

Parity Check 2

Start de PC opnieuw. Als de melding opnieuw verschijnt, neem dan a.u.b. contact op met uw dealer of met onze klantendienst.

Previous boot incomplete - Default configuration used

Als u op de functietoets **F2** drukt, kunt u in de setup van het *BIOS* de instelling uittesten en verbeteren. Als u op de functietoets **F1** drukt, start de PC met de onvolledige systeemconfiguratie. Als de melding opnieuw verschijnt, neem dan a.u.b. contact op met uw dealer of met onze klantendienst.

Foutmeldingen

Real time clock error

Roep de setup van het *BIOS* op en stel in het menu *Main* de juiste tijd in. Als de melding opnieuw verschijnt, neem dan a.u.b. contact op met uw dealer of met onze klantendienst.

System battery is dead - Replace and run SETUP

Vervang de lithiumbatterij op het motherboard en stel de *BIOS* opnieuw in.

System Cache Error - Cache disabled

Start de PC opnieuw. Als de melding opnieuw verschijnt, neem dan a.u.b. contact op met uw dealer of met onze klantendienst.

System CMOS checksum bad - run SETUP

Roep de setup van het *BIOS* op en corrigeer wat u voor het laatst heeft ingesteld of stel de defaultwaarden in.

System timer error

Start de PC opnieuw. Als de melding opnieuw verschijnt, neem dan a.u.b. contact op met uw dealer of met onze klantendienst.
