FCC & DOC Compliance

Federal communications Commission Statement

This device complies with FCC Rules Part 15. Operation is subject to the following two conditions:

♦   This device may not cause harmful interference.

♦   This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generatesm uses and can radiate radio frequency energy and, if not installed and used in accordance with the manufacturer's instructions, may cause harmful interference to radio communication. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, whichcan be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

♦   Re-orient or relocate the receiving antenna.

♦   Increase the separation between the equipment and the receiver.

♦   Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.

♦   Consult the dealer or an experienced radio/TV technician for help.

Warning

The use of shielded cables for the connection of the monitor to the graphics card is required to assure compliance with FCC regulations changes or modifications to this authority to operate this equipment.

Chapter 1
Overview

General Description

Thanks for purchasing **EUPA ITZV6 Socket 370** motherboard. **ITZV6** is based on Intel 810 chipset -- 82810(GMCH) & 82801AA(ICH) which was for Celeron ^{TM} (PPGA) and Copperminer (FC-PGA) Socket 370 processors. The product integrates 2D/3D graphics accelerator. It design 1 DIMM supporting 256MB system memory with PC 100. Also it employs AC ' 97 system, Ultra DMA 33/66 function, dual USB connectors and PCI IDE controller. This user's manual contains all the information and features that show you how to control **ITZV6** motherboard. Please take a moment to familiarize yourself with the design and organization of this manual.

Check Your Items

This **ITZV6** motherboard package contains the following items. Please inspect the package contents and confirm that everything is there. If anything is missing or damaged, call your vendor for instructions before operating.

The Package includes:
- ☞ **One ITZV6 motherboard**
- ☞ **One Floppy Interface Cable**
- ☞ **One IDE Interface Cable**
- ☞ **One Motherboard Resource CD**
- ☞ **One User's Manual**

ITZV6 Specifications:

Form Factor	FLEX-ATX
Board Size	17.0cm x 17.0cm
CPU	Supports Socket 370 Celeron(PPGA), Cu(FC-PGA) and further CPUs Supports FSB 66/100MHz
System Memory	DIMM 168-pin x 1, SDRAM maximum 256MB with PC100 SDRAM
Chipset	Intel 82810 GMCH Intel 82801AA ICH Intel 82802AB
Sound Function	ON board AC'97 system, Crystal4299 Audio Codec
Graphic	2D/3D graphic accelerator i752 Built in 82810 GMCH
I/O Interface	2 USB Ports 1 Audio Port (MIDI / game port, Line-in, Line-out, Mic-in) 1 LAN Port (10M / 100M auto detect) 1 PS/2 Mouse, 1 PS/2 Keyboard 1 VGA port 1 IrDA pinheader 1 serial port
Parallel Port	One parallel port supports: -SPP-standard parallel port -EPP-enhanced parallel port -ECP-extended capabilities port
Floppy Interface	Support drivers inches/format with: -3.5 inches-720KB/1.44MB/2.88MB -5.25 inches-360KB/1.2MB
IDE Interface	One IDE Interface support 2 x IDE HDD or CDROM Support PIO Mode 2, ULTRA DMA/33 & ULTRA DMA/66
Fuse	Support Recoverable fuse for USB,KB & MOUSE
RTC and Battery	Built in ICH Lithium(CR-2032) battery
Power Connector	ATX
Power On Function	Keyboard / Mouse power on
Other Key Feature	Monitor voltage and system environment temperature Wake on Modem
BIOS	Award BIOS ITE Hardware Monitor Supports virus warning Supports Flash / Upgrade BIOS functions
LED Indicator	System Power LED HDD activity LED

Motherboard Layout:
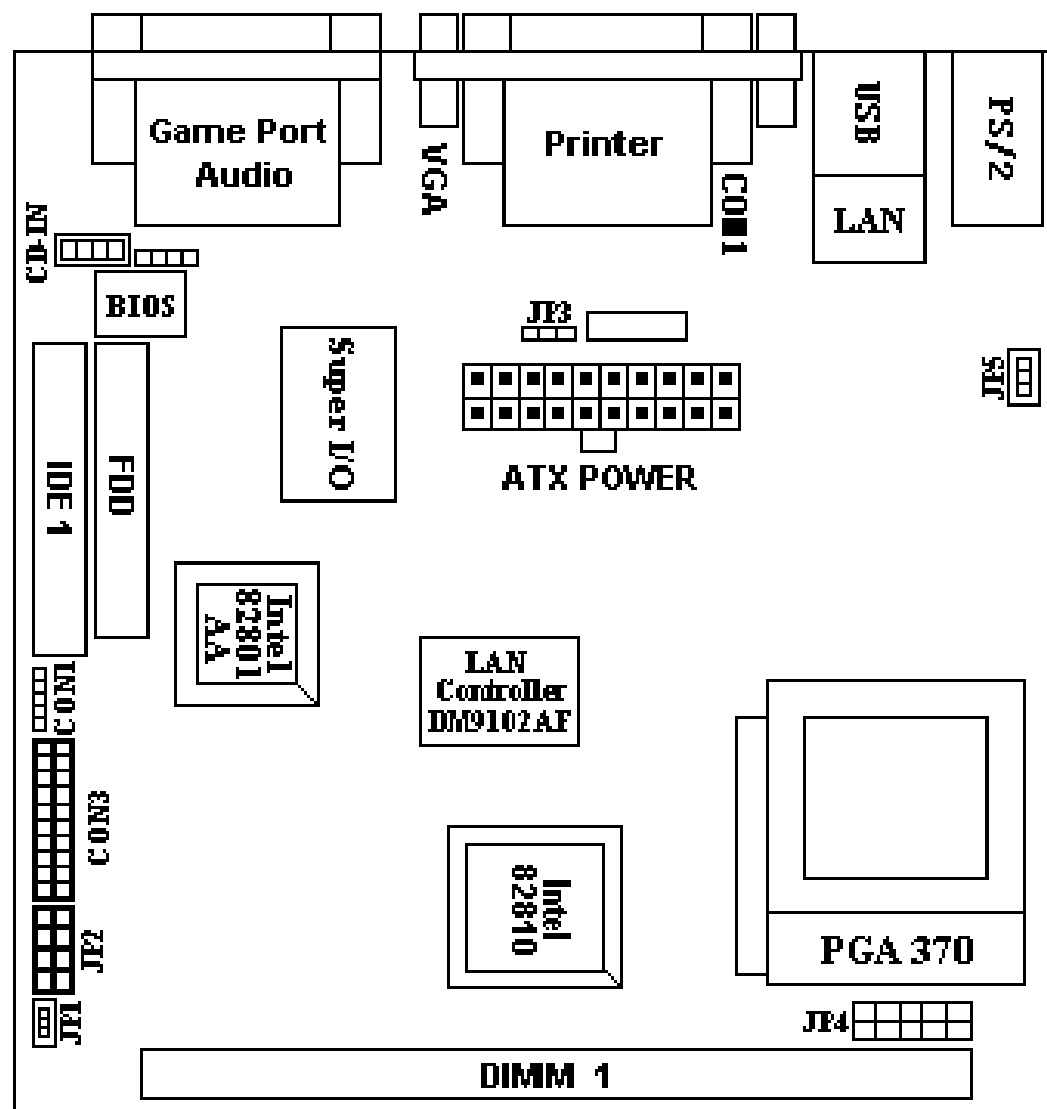

Jumpers

1.	JP3	Clear CMOS
2.	JP2	Select CPU clock frequency
3.	JP4	Select CPU type

Expansion Slots

1.	DIMM	Support 168-pin DIMM Memory

Connectors

1.	PS/2 KB	PS/2 Keyboard Connector
2.	PS/2 Mouse	PS/2 Mouse Connector
3.	LAN	LAN Connector
4.	USB	Universal Serial Bus Port1 and Port2
5.	Printer	Printer (Parallel) Port Connector
6.	ATX Power	ATX Power Connector
7.	JP1	System Fan Connector
8.	JP5	CPU Fan Connector
9.	Floppy	Floppy Drive Connector
10.	IDE 1	Primary IDE Connector
11.	CON 1	IrDA Connector
12.	CON 2	Audio CD-IN Connector

13. Panel(CON3)

- PWR LED	ATX Power LED (3pins)
- SPEAKER	Chassis Speaker (4pins)
- HDD LED	HDD LED (2pins)
- RESET	Reset Switch (2pins)
- PWR ON	ATX Power Switch (2pins)

Chapter 2
Hardware Installation

This chapter gives you a step-by-step procedure on how to install your system and set jumper. The motherboard has several user-adjustable jumpers on the board that allow you to configure your system to suit your requirements.

Cautions: **Protecting Against Electrostatic Discharge**

Static electricity can harm delicate components inside your system. To prevent static electricity damage, discharge static electricity from your body before you touch any of your motherboard electronic components, such as the microprocessor. Observe the following precautions:

- Do not removes the motherboard from its anti-static packaging until you are ready to install it into a computer case.

- Before you handle the motherboard in any way, touch a grounded, antistatic surface, such as an unpainted portion of the system chassis, for a few seconds to discharge any built-up static electricity.

- Handle add-in cards and modules by the edges or mounting bracket.

Set Jumpers:

Jumpers are used to select the operation modes for your system. Each jumper on the board has several metal pins with each pin representing a different function. A "1" is written besides pin 1 on jumpers with several pins. To set a jumper, a plastic cap containing metal contactor is placed over the jumper pins according to the required configuration. A jumper is said to be shorted when the plastic cap has been placed on two pins of it. The types of jumpers used in this manual are shown below:

Jumper Cap   **3-pin Jumper**   **4-pin Jumper**   **Jumper Block**

3   2   1   **Open**   **3   2   1**   **Short**
Note:

Users are not encouraged to change the jumper settings not listed in this manual. Changing the jumper settings improperly may adversely affect system performance.

Clear CMOS: *JP3*

JP3 Clear CMOS

**Clear CMOS** **Normal (Default)**

To Clear CMOS, please follow the steps below:

1. Power off the system and unplug the chassis AC power cord.

2. Short JP3 at pin 2-3 for few seconds.

3. Set JP3 back to its Normal position at pin1-2

4. Plug the AC power cord to the chassis.

5. Power on the system and load the BIOS set up default.

Install CPU

The CPU module resides in the socket 370 on the motherboard. Please following the steps introduced below to complete the CPU installation.

1) Locate the new processor you are installing over the socket so that the notched corner on the processor (pin 1) can be aligned with the blank corner on the socket. Then gently push the processor straight into the socket until its pins are completely inserted into the holes of the socket.
Caution:

If you install the processor chip in the wrong orientation, you may burn the chip and void your warranty. So you should install it careful deeply.

2) Press the ZIF handle back to close it.
3) Attach the heat sink to the processor socket and then connect a fan connector cable from the CPU fan to the CPU FAN connector.
CPU Setting

After installing the CPU, you must set the clock selection jumpers to match the frequency of the CPU. Find the jumper labeled **JP2**, set it (from pin 1 to 8, we call them as FS0, FS1, FS2, FS3) according to the figure below and table for CPU clock frequency. **JP4** is used for CPU Type Selection.

1   CPU Type Selection: JP4

JP4
CPU Type Selection
Celeron

66MHz   100MHz

Coppermine

100MHz

CPU TYPE	JP4 PIN	
	66MHz	100MHz
Celeron	3-4 5-6 7-8	3-4 5-6
Coppermine		3-4 5-6
2 CPU Clock Frequency: JP2
JP2
OPEN (O)   **SHORT (S)**

CPU (MHz)	PCICLK (MHz)	JP2 PIN			
		FS0 (1-2)	FS1 (3-4)	FS2 (7-8)	FS3 (5-6)
66.80	33.40	S	S	S	S
68.00	34.00	O	S	S	S

Hardware Installation

Connectors:

1. Panel Connector:
-POWER LED	ATX Power LED (3-pins)
-SPEAKER	Chassis Speaker (4-pins)
-HDD LED	HDD LED (2-pins)
-RESET	Reset Switch (2pins)
-PWR ON	ATX Power Switch (2pins)

2. Power Connector

Connect the 20-pin ATX power supply cable to this power connector. Make sure the right plug-in direction and the power supply is off before connecting or disconnecting the power cable.

Remark: **We suggest that users use 5 V STB and power source current should be over 0.7A, otherwise it will affect system boot up.**

Remark: We suggest that users use 5 V STB and power source current should be over 0.7A, otherwise it will affect system boot up.
ATX Power Connector
3. Fan Connector

Connect the CPU and System fan cables to the fan connectors shown below.
The fan connectors are marked as: **SYS FAN & CPU FAN** on the motherboad.

FAN CONNECTOR

CPU FAN
SYS FAN

SENSE
+12V
GND
4. PS/2 Mouse and Keyboard Connector

Connect the **PS/2 Mouse** and **Keyboard** to the onboard 6-pin Mini-Din connector shown as below.
5. USB Device Connector

Connect your **USB** device(s) to the onboard USB connector shown as below.

Top: USB1
Bottom: USB2

USB
6. Serial Device COM1, VGA and Printer Connectors

Connector your serial device(s) to the onboard serial connectors marked as **COM1**. Connect the 15-pins VGA Monitor Output marked as **VGA** to your system monitor or other VGA compatible devices. Connect your local **Printer** to the onboard 25-pin printer connector marked shown as below.
7. Floppy Drive Connector

Connect the floppy drive cable to the onboard 34-pin floppy drive connector marked as **FDD.**
8. IrDA Connector

Connect your IR devices to the onboard **IrDA** connectors shown as below.

Pin	Description
5	IRTX
4	GND
3	IRRX
2	NC
1	+5V

IrDA
9. IDE Hard Disk Connector

Connect your IDE devices to the onboard 40-pin IDE connectors marked as **IDE1** .

PIN 1

IDE
10. LAN Connector

Connect your **LAN** port to the onboard LAN connector shown as below.

LAN Connector
11. Game / Audio Connector and CD_IN Connectors

The 15-pin female **Game/Audio** connector allows you to connect game joystick or game pads for playing games. Connect MIDI devices for playing or editing audio. The CD connector onboard marked as **CD-IN** is for CD-ROM connection.

JOYSTICK   **CD-IN**
                    CON 2
LINE OUT   LINE IN   MIC IN

System Memory Installation

There is 1 piece 168-pin DIMM (Dual Inline Memory Module) socket on the motherboard which support SDRAM and EDO DRAM memory.

♦ To ensure reliability, it is recommended to use PC 100 SDRAM for your high clock SDRAM performance requirement.

♦ DIMM Sizes supported: **8MB, 16MB, 32MB, 64MB, 128MB, 256MB.**
There are 1x168-pin DIMM slot that allow you to install the system memory max up to 256MB SDRAM.
DIMM

1   Install DIMM

1)   Locate the DIMM socket on the motherboard.

2)   Orient a DIMM to the socket so that the two notches in the DIMM connector are aligned with the crossbars in the socket.

3)   Press the DIMM straight into the socket until the retaining clips snap into place around the ends of the DIMM.
2   Removing a Memory Module

To remove memory module, press the retaining clips outward simultaneously until the DIMM disengages from the socket and then carefully remove the DIMM from the socket.
Chapter 3
CMOS Setup Utility

The rest of this manual is intended to guide you through the process of configuring your system using Setup. While the BIOS is in control, the Setup program can be activated by pressing the <Del>key during the POST (Power On Self-Test).If the message disappears before you respond and you still wish to enter Setup, restart the system to try again by turning it OFF then ON or pressing the " RESET " button on the system case. You may also restart by simultaneously pressing <Ctrl>, <Alt>, and <Delete> keys.

CMOS Setup Main Menu

Once you enter the BIOS setup utility, the Main Menu will appear on the screen. The Main Menu allows you to select from several setup functions . the arrow keys to select among the items and press <Enter> to accept and enter the submenu.

CMOS Setup Utility - Copyright (C) 1984-2000 Award Software

■ Standard CMOS Features	Load Fail-Safe Defaults
■ Advanced BIOS Features	Load Optimized Defaults
■ Advanced Chipset Features	Set Supervisor Password
■ Integrated Peripherals	Set User Password
■ Power Management Setup	Save & Exit Setup
	Exit Without Saving
Esc : Quit	↑↓←→: Select Item
F10 : Save & Exit Setup	
Abandon all datas	

The main menu includes the following main setup categories, which defines basic information about your system. Below are the keyboard function keys you can use under the menu.

Menu function keys:

| ↑ ↓ ← → | : To Move around the screen. An item is highlighted if it is selected. |

| F1 | : Help. |

| F10 | : Save CMOS Changes & Exit. |

| ENTER | : To select or enter a submenu. |

| ESC | : To quit the BIOS Setup Utility. |
Standard CMOS Setup
The items in Standard CMOS Setup Menu are divided in 10 catagories. Each catalogue includes one or more than one setup items. Use the keys to highlight the item and then use the ↑↓←→ / <PgUp> / <PgDn> keys to select the value you want in each item.

IDE HDD Auto-detection

Press Enter to auto - detect the HDD on the channel. If detection is successful, it fills the remaining feilds on the menu.

IDE Primary Master

Selecting ' manual' lets you set the remaining fields on the screen. Selects the type of fixed disk. " User Type " will let you select the number of cylinders, heads, etc.

Note: PRECOMP=65535 means NONE!

The optional are: None, **Auto (Default)**, Manual

The following options are selectable onlyif the 'IDE Primary Master' item is set to 'Manual':		
Cylinder	Min = 0 Max = 65535	Set the number of cylinders for this hard disk.
Head	Min = 0 Max = 255	Set the number of read/write heads
Precomp	Min = 0 Max = 65535	Warning: Setting a value of 65535 means no hard disk
Landing zone	Min = 0 Max = 65535	
Sector	Min = 0 Max = 255	Number of sectors per track

CMOS Setup Utility

Access Mode

Choose the access mode for this hard disk.

The optional are: Normal, LBA, Large, **Auto (Default)**.

Capacity

Disk drive capacity (approximated). Note that this size is usually slightly greater than the size of the formatted disk given by a disk checking program.

The optional are: Auto display your drive size.

Drive A / Drive B

Select the floppy drive type installed in your system. The available options for Drive A and Drive B.

The optional are: 360K 5.25 in, 1.2M 5.25 in, 720K 3.5 in, 1.44M 3.5 in**(Drive A default)**, 2.88M 3.5 in and NONE **(Drive B default)**.

Video

Select the video display card type installed in your system.

The optional are: **EGA/VGA (Default)**, CGA 40, CGA 80 and Mono.

Halt On

This item defines the operation of the system POST (Power On Self-Test). You can use this item to select which kind of errors will cause the system to halt during POST.

The optional are: All Errors, No Errors, **All But Keyboard (Default),** All But Diskette and All But Disk / Key

Advanced BIOS Features

F6 : Fail-safe defaults Esc:Exit   F1: General Help F7 : Optimized Defaults

Virus Warning

If this function enabled and someone attempt to write data into this area, BIOS will automatically show a warming message on screen and alarm beep.

The optional are: Enabled, **Disabled (Default)**

CPU Internal / External cache

These two items controls Enable / Disable the CPU internal / external cache.

The optional are: **Enabled (Default)**, Disabled

CPU L2 Cache ECC Checking

This item allows you to enable / disable CPU L2 Cache ECC Checking.

The optional are: **Enabled (Default)**, Disabled

CMOS Setup Utility

Quick Power On Self Test

This item speeds up Power On Self Test (POST) after you power up the computer. If it is set to Enable, BIOS will shorten or skip some check items during POST.

The optional are: Enabled, **Disabled (Default)**

First / Second / Third Boot Device

The BIOS attempts to load the operating system from the devices in the sequence selected in these items.

The optional are: **Floppy (First Default), HDD-0(Second Default), LS 120 (Third Default)**, HDD-1/2/3, ZIP 100, SCSI, CDROM, LAN.

Boot Other Device

The BIOS attempts to load the operating system from the other device in the sequence selected in these items.

The optional are: **Enabled (Default)**, Disabled

Swap Floppy Drive

If the system has two floppy drives, choose enable to assign physical drive B to logical drive A and vice-versa.

The optional are: Enabled, **Disabled (Default)**

Boot Up Floppy Seek

Seeks disk drives during boot up.

The optional are: **Enabled (Default)**, Disabled

Boot Up NumLock Status

Selects power on state for NumLock.

The optional are: Off**,** On **(Default)**

Gate A20 Option

Normal-a pin in the keyboard controller controls Gate A20. Fast lets chipset control Gate A20.

The optional are: Normal, **Fast (Default)**

3-7

Typematic Rate Setting

Keystrokes repeat at a rate determined by the keyboard controller, when enabled, the typematic rate and typematic delay can be selected.

The optional are: Enabled, **Disabled(Default)**

Typematic Rate (Chars/Sec)

Sets the number of times a second to repeat a key stroke when you hold the key down.

The optional are: **6 (Default)**, 8, 10, 12, 15, 20, 24, 30

Typematic Delay (Msec)

Select the delay time after the key is held down before it begins to repeat the key strokes.

The optional are: **250 (Default)**, 750, 1000

Security option

Select whether the password is required every time when you enter setup.

Setup -- The system will boot up.

System -- The system will not boot and access to setup will be denied if the correct password is not entered at the   prompt.

The optional are: **Setup (Default)**, System

OS Select for DRAM > 64MB

Select OS2 only if you are running OS/2 operating system with greater than 64MB of RAM on the system.

The optional are: **Non-OS/2 (Default)**, OS/2

Report No FDD for WIN 95

Whether report no FDD for WIN 95 or not.

The optional are: Yes, **No (Default)**

Advanced Chipset Features

This item allows you to configure the system based on the specific features of the chipset. This chipset manages bus speed and access to system memory recources, and external cache. It must be stated that these items should never need to be altered.The default settings have been chosen because they provide you the best operating conditions for your system. The only time you might consider making any changes if you discovered that the datas were being lost while control your system.

```

SDRAM CAS Latency Time
When synchronous DRAM is installed, the number of clock cycles of CAS latency depends on the DRAM timing.
The optional are: 3(**Default**), 2

SDRAM Cycle Time Tras/Trc
Select the number of SCLKs for an access.
The optional are: **6/8 (Default)**, 5/7

3-9

SDRAM RAS-to-CAS Delay

When synchronous DRAM is installed in the system, this field lets you insert a timing delay between the as CAS and RAS strobe signals, used DRAM is written to, read from,or refreshed.

The optional are: **3(Default)**, 2

SDRAM RAS Precharge Time

If an insufficient number of cycles is alllowed for the RAS to accumulate its charge before DRAM refresh, the refresh may be incomplete and the DRAM may fail to retain data.

The optional are: **3(Default)**, 2

System BIOS Cacheable

Selecting Enabled allows caching of the system BIOS ROM at F0000h-FFFFFh, resulting in better system performance.

The optional are: Enabled, **Disabled(Default)**

Video BIOS Cacheable

Select Enabled allows caching of the video BIOS, resulting in better system performance.

The optional are: Enabled, **Disabled(Default)**

Memory Hole At 15M - 16M

When this area is reserved, it cannot be cached. The user information of peripheral that need to use this area of system memory usually discusses their memory requirements.

The optional are: Enabled, **Disabled(Default)**

CPU Latency Timer

This option allows you to Enabled/Disabled CPU latency Timer.

The optional are: Enabled, **Disabled(Default)**

Delayed Transaction

Select Enabled to support compliance with PCI specification version 2.1.

The optional are: **Enabled(Default)**, Disabled

Delayed Transaction

Select Enabled to support compliance with PCI specification version 2.1.

The optional are: **Enabled(Default)**, Disabled

On-chip Video Window Size

Select the on-chip video window size for VGA drive use.

The optional are: Enabled, 32MB, **64MB(Default)**

Use VGA BIOS in VBU Block

Let you determine whether use VGA BIOS in VBU Block or not.

The optional are: **Enabled (Default)**, Disabled

On-Chip IDE

The integrated peripheral controller contains an IDE interface with support IDE channel. Select Enabled to activate the channel.

The optional are: **Enabled (Default)**, Disabled

IDE Master / Slave PIO

The two IDE PIO fields let you set a PIO mode for each of the two IDE devices that IDE face support onboard. Mode 0 through 4 provide successively increased performance. In Auto mode, the system automatically determines the best mode for each device.

The optional are: **Auto (Default)**, Mode 0, Mode 1, Mode 2, Mode3, Mode 4

IDE Master / Slave UDMA

If your hard drive and system software both support Ultra DMA 33, select Auto to enable BIOS support.

The optional are: **Auto(Default)**, Disabled

USB Controller

Select Enabled if your system contains a Universal Seria Bus (USB) controller and you have a USB peripheral.

The optional are: **Enabled (Default)**, Disabled

USB Keyboard Support

Select Enabled if your system contains a universal Serial Bus (USB) controller and you have a USB keyboard.

The optional are: Enabled, **Disabled(Default)**

AC 97 Audio

This item allows you to decide to enable/ disable the 810 chipset family to support AC 97 audio.

The optional are: **Auto (Default)**, Disabled

CMOS Setup Utility

IDE HDD Block Mode

If your IDE hard drive supports block mode (most new drives do), select Enabled for automatic detection of the optimal number of block read / write per sector the drive can support.

The optional are: **Enabled(Default)**, Disabled

KBC input clock

Set the KBC input clock.

The optional are: **8MHz (Default)**, 12MHz

POWER ON Function

Set the power on function mode for power on.

The optional are: Password, Hot Key, Mouse Move / Click, **Any Key(Default)**, BUTTON ONLY, Keyboard 98

KB Power ON Password

If Power On Function is set Password, this option let you set KB Power On Password. Press <Enter> and enter your password.

Hot Key Power ON

This option let you choose Power ON Key from <Ctrl-F1> to <Ctrl-F12>.

The optional are: Ctrl-F1**(Default)**, Ctrl-F12

Onboard FDC Controller

Select Enabled if your system has a floppy disk controller (FDC) installed on the system board and you wish to use it. If you install an add-in FDC or the system has no floppy drive, select Disabled in this field.

The optional are: **Enabled(Default)**, Disabled

Onboard Serial Port

Select a logical COM port name and matching address for the serial port. Select an address and corresponding interrut for serial port.

The optional are: Auto, Disabled, **3F8 / IRQ4(Port 1 Default), 2F8 / IRQ3(Port 2 Default)**, 3E8 / IRQ4, 2E8 / IRQ3

UART Mode Select

Let you choose UART Mode.

The optional are: **Normal(Default)**, IrDA, ASKIR, SCR

Onboard Parallel Port

Select a logical LPT port address and corresponding interrupt for the physical parallel port.

The optional are: **378/IRQ7(Default)**, 278/IRQ5, 3BC/IRQ7, Disabled

Parallel Port Mode

Select an operating mode for the on board parallel (printer) port.

The optional are: **SPP(Default)**, EPP, ECP, ECP+EPP

Game Port Address

Select an address for game port.

The optional are: Disabled, **201(Default)**, 209

Midi Port Address

Select an address for Midi Port.

The optional are: Disabled, **330 (Default)**, 300

Midi Port IRQ

Select a corresponding interrupt for Midi Port.

The optional are: 5, **10(Default)**

Power Management Setup

The Power Management Setup allows you to configure your system effectively save energy while operating in a manner consistent with your own style of computer use.

CMOS Setup Utility - Copyright (C) 1984-2000 Award Software
Power Management Setup

Power Management	User Define	Item Help
Video Off Method	DPMS	
Video Off In Suspend	Yes	Menu Level ➤
Suspend Type	Stop Grant	
Suspend Mode	Disabled	
HDD Power Down	Disabled	
Soft-Off by PWR-BTTN	Instant-Off	
Wake On by Ring	Enabled	
** Reload Global Timer Events **		
Primary IDE 0	Disabled	
Primary IDE 1	Disabled	
FDD, COM, LPT Port	Disabled	
PCI PIRQ [A-D]#	Disabled	

↑↓←→: Move Enter: Select   F5 : Previous Values +/-/PU/PD: Value F10: Save
F6 : Fail-safe defaults Esc:Exit   F1: General Help F7 : Optimized Defaults

Power Management

This category allows you to select the type(or degree) of power directly related to the following modes: HDD Power Down; Doze Mode; Suspend Mode. User Define allows you to set each mode individually. When not disabled, each of the ranges are from 1min. to 1hr. except for HDD Power Down which ranges from 1min. to 15min. and disable.
The optional are: **User Define(Default)**, Min Saving, Max Saving

Video Off Method

Determines the manner in which the monitor is blanded. System turns off vertical and horizontal synchronization ports and writes blanks to the video buffer. Select this option if your monitor supports.System only writes blanks to the video buffer.
The optional are: V/H SYNC+Blank, **DPMS (Default)**, Blank Screen

Video Off In Suspend

Setup whether video off in suspend or not.

The optional are: **Yes (Default)**, No

Suspend Type

This item lets you select a method of global system suspend.

The optional are: **Stop Grant(Default)**, PwrOn Suspend

Suspend Mode

After the selected period of system inactivity, all devices except the CPU shut off.

The optional are: 1/2/4/8/12/20/30/40Min, 1 Hour, **Disabled (Default)**

HDD Power Down

After the selected period of drive inactivity, the hard disk drive powers down while all other devices remain active.

The optional are: 1/2/3/4/5/6/7/8/9/10/11/12/13/14/15 Min, **Disabled(Default)**

Soft-Off by PWR-BTTN

When Enabled, turning the system off with the on/off button places the system in a very low-power-usage state, with only enough circuitry receiving power to detect power button activity or Resume by Ring activity.

The optional are: **Instant-Off (Default)**, Delay 4 Sec.

Wake On by Ring

Setup whether Wake on by ring or not.

The optional are: **Enabled(Default)**, Disabled

Primary IDE 0 / IDE 1

This option allows you determine whether enable Primary IDE 0/IDE 1 or not.

The optional are: Enabled, **Disabled(Default)**

FDD,COM,LPT Port

This option allows you set whether enable FDD, COM, LPT Port or not.

The optional are: Enabled, **Disabled(Default)**

PCI PIRQ[A-D]#

This option lets you set PCI PIRQ [A-D]#.

The optional are: Enabled, **Disabled(Default)**

Load Fail-Safe Defaults

This option allows you load Fail-Safe Defaults settings. To load setup default, press <Y> key to confirm the operation when you see the below display.

CMOS Setup Utility - Copyright (C) 1984-2000 Award Software

■ Standard CMOS Features	■ Frequency / Voltage Control
■ Advanced BIOS Features	Load Fail-Safe Defaults
■ Advanced Chipset Features	Load Optimized Defaults
■ Integrate **Load Fail - Safe Defaults (Y / N)? N** sord	
■ Power Management Setup	Set User Passoword
■ PnP / PCI Configuration	Save & Exit Setup
■ PC Health Status	Exit Without Saving
Esc : Quit	↑↓←→: Select Item
F10 : Save & Exit Setup	
Abandon all datas	

Load Optimized Defaults

This option allows you load Optimized Defaults settings to optimize your system. To load optimized default, press <Y> key to confirm the operation when you see the below display.

CMOS Setup Utility - Copyright (C) 1984-2000 Award Software

■ Standard CMOS Features	■ Frequency / Voltage Control
■ Advanced BIOS Features	Load Fail-Safe Defaults
■ Advanced Chipset Features	Load Optimized Defaults
■ Integrated Peripherals	Set Supervisor Passord
■ Power M	**Load Optimized Defaults (Y / N)?**
■ PnP / PCI Configuration	Save & Exit Setup
■ PC Health Status	Exit Without Saving

Set Supervisor / User Password

Password prevents unauthorized use of your computer. If you set a password, the system prompts for the correct password before boot or access to setup. The main difference between Supervisor Password and User Password is the privilege. Because Supervisor Password allows you to modify all CMOS setup but User password only some of them.

Their steps all as follows:

1. Highlight the item Set Supervisor Password / Set User Password on the main menu and press ENTER.

2. The password dialog box will appear.

3. If you are installing a new password, carefully type in the password. Press ENTER after you have typed in the password. If you are deleting a password that is already installed just press ENTER when the password dialog box appears.

4. The system will ask you to confirm the new password by asking you to type it in a second time. Carefully type the password again and press ENTER, or just press ENTER if you are deleting a password that is already installed.

5. If you typed the password correctly, the password will be installed.

[NOTE]

If you forget your password, or you want to cancel your password, you can do the steps as the following:

(1) **Password forgotten:**
   i.   Turn off the system.
   ii.   Short JP3 at Pin 2-3 for a few seconds to clear CMOS.
   iii. Set the JP3 back to Pin 1-2.
   iv.   Power on the system.

(2) **Clear Password:**
   Clear your password by key in the password you installed before, then go to password setting to press ENTER twice.

Save & Exit Setup

Highlight this item and press ENTER to save the changes that you have made in the setup utility and exit the setup program. When the Save and Exit dialog box appears, press <Y> to save and exit, or press <N> to return to the setup main menu.

Exit Without Saving

Use this option to exit setup utility without saving the CMOS value changes.

Chapter 4
Software Utility

The support software for this motherboard is supplied in a CD. All the support programs are stored in separate folders, so you can find the program you need easily enough. We recomend you to choose the program which you need most, it will assist your computer system to high performance.

Installing Interface

After you insert CD driver, it runs automaticly and appear the interface as below:

Choose the language and interface you need.

Installing Driver Location:

Insert CD Driver to the CD-ROM, driver runs by itself, and appear the following interface, please refer to the procedure, then finish installing. ITZV6 provides you the following Installing Driver:
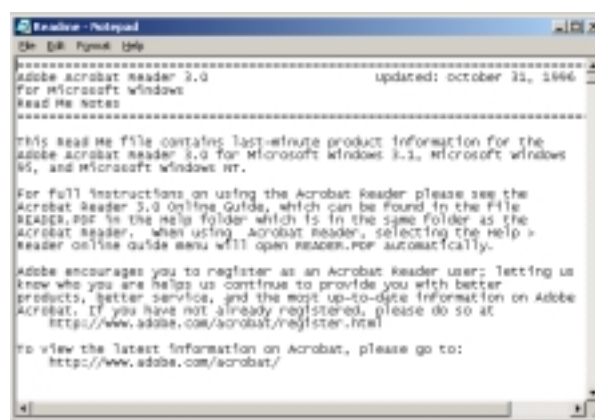

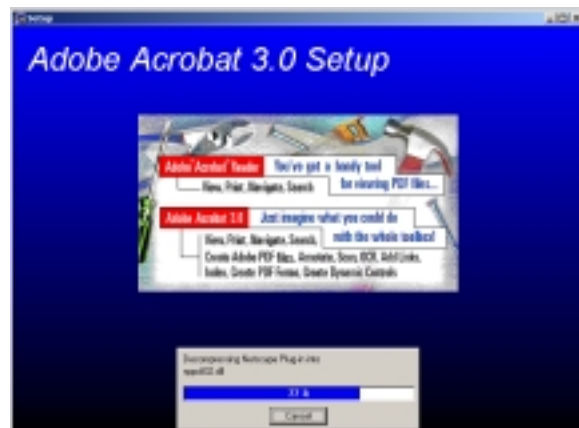

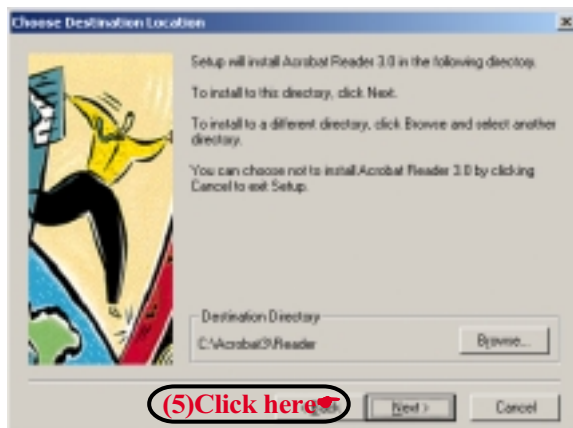

Intel Video Driver Location :	**/VGA DRIVER**
Intel 810 Chipset Driver Location:	**/CHIPSET**
IDE DMA66 Driver Location:	**/IDE**
Audio Driver Location:	**/AUDIO**
LAN Driver Location:	**/LAN**

Installing ADOBE Acrobat Read Driver

Insert CD Driver to the CD-ROM, driver runs by itself, and appear the following interface, please refer to the procedure, then finish installing.
