Intel Pentium 4 Processor Family Cooling Solutions

As processor technology pushes to faster speeds and higher performance, thermal management becomes increasingly crucial when building computer systems. Maintaining the proper thermal environment is key to reliable, long-term system operation. The overall goal in providing the proper thermal environment is keeping the processor below its specified maximum case temperature. Heat sinks induce improved processor heat dissipation through increased surface area and concentrated airflow from attached fans. In addition, interface materials allow effective transfers of heat from the processor to the heatsink. For optimum heat transfer, Intel recommends the use of thermal grease and mounting clips to attach the heatsink to the processor.

When selecting a thermal solution for your system, please refer to the website below for collection of heat sinks evaluated and recommended by Intel for use with Intel processors. Note, those heat sinks are recommended for maintaining the specified Maximum T case requirement. In addition, this collection is not intended to be a comprehensive listing of all heat sinks that support Intel processors.

For vendor list of heatsink and fan, please visit : <u>http://developer.intel.com/design/Pentium4/components/index</u>

Chapter 1

Introduction of INTEL 945PL Chipset Motherboard Series 1-1 Feature of motherboard

The Intel 945PL chipset motherboard series are based on the latest Intel 945PL Express Chipset and Intel FW82801GB ICH Chipset technology which supports the innovative 90nm Dual-Core Intel® Pentium® D processor, Intel® Pentium® 4 Processor with HT Technology and all other Intel® Pentium processors and Intel® Celeron® processors in the LGA775 socket with the scalability for future processor innovations. The motherboard is optimized to deliver innovative features and professional desktop platform solution with the advantages of 64-bit reliable multi-tasking dual core Intel® Pentium® D Processor and value added Intel 945PL chipset delivering supercharged performance and the best experience for advanced gamers and power users. Through the high bandwidth of dual channel DDR2 400 / 533MHz memory which is expandable to 2.0GB and the next generation PCI Express interface for the latest graphics cards from both NVIDIA & ATI. The Intel 945PL chipset motherboard series are absolutely a cost-effective solution for game enthusiasts and applications, and it also meets the demanding usage of computing performance for gaming, multimedia entertainment and business applications of today and the future.

The motherboards implement Intel 945PL Express Chipset which supports Front Side Bus 533MHz / 800MHz of data transferring and offers with 100 / 133MHz memory clock frequency for Dual channel DDR2 400 / 533 MHz DIMMs to double the performance of memory access. The motherboard is embedded with ICH7 chipset of providing one parallel Ultra ATA 100 interface for optical drives and four serial ATA2 interface of 3.0Gb / s data transfer rate.

The motherboards offer one PCI-Express x16 graphics slot of 4Gbyte/sec data transfer rate at each relative direction which gets 3.5 times of bandwidth more than AGP8X and it's up to a peak concurrent bandwidth of 8Gbyte/sec at full speed to guarantee the ultimate GPU computing performance. Three 32-bit PCI slots guarantee the rich connectivity for the I/O of peripherals. Two PCI Express x1 I/O slots offer 512Mbyte/sec concurrently bandwidth which is over 3.5 times than 32-bit PCI at 133Mbye/sec, the motherboards are designed of tackling the profuse multimedia requirements nowadays.

The motherboards provide 10/100 Ethernet compatible LAN function by using the Realtek RTL8100C 10 /100 LAN NIC which supports 10M / 100M data transfer rate(not for 945PLDAG-V6), the 945PLDAG-V6 motherboard provides Gigabit LAN function by utilizing the RTL8110S Gigabit LAN chip which supports 10M/100M/1000M data transfer rate. Embedded AC'97 8-channel Audio CODEC is fully compatible with Sound Blaster Pro[®] standards that offers you with the home cinema quality and absolutely software compatibility, the 945PLDAG-V6&945PLDAS-V6 motherboards implement the ALC655 audio CODEC chip which supports 6 channel audio.

Embedded USB controller as well as capability of expanding to 8 of USB2.0 functional ports delivering 480Mb/s of rich connectivity, these motherboards meet the demands of future USB peripherals which are also equipped with hardware monitor function on system to monitor and protect your system and maintain your non-stop business computing.

Some special features---CPU Thermal Throttling/ CPU Vcore 7-shift/ CPU Smart Fan/ Optional Debug Port in this motherboard are designed for power user to use the overclocking function in more flexible ways. But please be caution that the over-clocking maybe cause the fails in system reliabilities. This motherboard provides the guaranteed performance and meets the demands of the next generation computing. But if you insist to gain more system performance with variety possibilities of the components you choose, please be careful and make sure to read the detailed descriptions of these value added product features, please get them in the coming section.

1-1.1 Special Features of motherboard

Bi-turbo Technology(optional)---(Hardware-based Dynamic Over-clocking)

The Bi-turbo Technology offers you dual over-clocking modes. On top of the software based BIOS setting "Current CPU Clock" for over-clocking, the onboard hardware circuitry will monitor the change of CPU current to activate 2nd level over-clocking at preset workload level automatically. The Bi-turbo technology offers the versatility of both hardware-based intelligent automatic mode and power-manual mode for extra computing performance. Without complex settings from system BIOS, Bi-turbo provides the seeing promoted system performance by simple and intuitional BIOS setting. Bi-turbo technology offers more flexible ways to choose the over-clocking range of over-clocking activation by actually CPU hardware loading you define. (for detail operating please read Section 3-11 Bi-turbo Configuration)

Optional Debug Port --- (The Professional Hardware Diagnosis System and not for 945PLDAS-

VC motherboards)

Being bugged of abnormal system failure through the tossed and turned nights no more, the embedded Hardware Debug Port offers you the real-time visual system healthy for the demanding usage of computing. No more bugging by unknown system failure and no more time wasted in the first moment of 24-hour nonstop ping business computing, the embedded Debug Port will turn you into a well training hardware professional with the seeing system situation. (The Post Code please refer Appendix)

CPU Thermal Throttling Technology---(The CPU Overheat Protection Technology)

To prevent the increasing heat from damage of CPU or accidental shutdown while at high workload, the CPU Thermal Throttling Technology will force CPU to enter partially idle mode from 87.5% to 12.5% according to preset CPU operating temperature in BIOS (from 40° C to 90° C). When the system senses the CPU operating temperature reaching the preset value, the CPU operating bandwidth will be decreased to the preset idle percentage to cool down the processor. When at throttling mode the beeper sound can be optionally selected to indicate it is in working. (for detail operating please read Section 3-11 Bi-turbo Configuration)

CPU Smart Fan---(The Noise Management System)

It's never been a good idea to gain the performance of your system by sacrificing its acoustics. CPU Smart Fan Noise Management System is the answer to control the noise level needed for now-a-day's high performance computing system. The system will automatically increase the fan speed when CPU operating loading is high, after the CPU is in normal operating condition, the system will low down the fan speed for the silent operating environment. The system can provide the much longer life cycle for both CPU and the system fans for game use and business requirements.

CPU Vcore 7 Shift--- (Shift to Higher Performance)

The CPU voltage can be adjusted up by 7 steps for the precisely over-clocking of extra demanding computing performance.

1-2 Specification

Spec	Description
Design	* ATX form factor 4 layers PCB size: 30.5x21 cm
Chipset	* Intel 945PL Memory Controller Hub (MCH) Chipset for
	945PLDAS Motherboard Series
	* Intel 82801GB I/O Controller Hub (ICH7) Chipset
CPU Socket	* Support Intel Pentium 4 775-Land LGA Package utilizes Flip-
(LGA775 Socket)	Chip Land Grid Array (FCLGA4) package processor
	 * Support FSB Frequency 533MHz / 800MHz
	* Support 5xx,6xx,8xx LGA 775 Pentium 4 processor Series
	* Reserves support for Dual-Core Intel Pentium 4 processors
Memory Socket	* 240-pin DDR2 RAM module socket x2
	* Support Dual channel DDR2 400MHz / 533MHz RAM Module
	and which is expandable to 2.0GB.
Expansion Slots	* PCI-Express x16 slot 1pcs delivers up to 8GB/s concurrent
	Dandwidth.
	* PCI-Express X1 slot 2pcs derivers up to 512MID/s concurrent handwidth
	22 bit PCI slot x 2pos at 123MHz
Integrate IDE and	* One PCI IDE controller supports PCI Bus Mastering, ATA
Serial ATA2	PIO/DMA and the ULTRA DMA 33/66/100 functions that
	deliver the data transfer rate up to 100 MB/s; four Serial ATA2
I A N(Circobit I A N for	botts provide 5.0 GD/sec data transfer rate.
945PLDAG-V6	* Integrated Realter RTL 8110C Circebit LAN for 045DL DAC V6
motherboard)	* Integrated Realter RTL81105 Olgabit LAIV 101 945FLDAG- V0
·····,	 Support Fast Ethernet I AN function of providing
	10Mb/100Mb/1000 Mb/s data transfer rate
Audio(6 channel	* Realtek ALC850 AC'97 8-channel Audio Codec integrated
audio for	* Realtek ALC655 AC'97 6-channel Audio Codec integrated for
945PLDAS-	945PLDAS-V6&945PLDAG-V6 motherboard
V6&945PLDAG-	* Support 8-channel 3D surround & Positioning Audio
V6 motherboard)	* Audio driver and utility included
BIOS	* Award 4MB Flash ROM
Multi I/O	* PS/2 keyboard and PS/2 mouse connectors
	* Floppy disk drive connector x1
	* Parallel port x1
	* Serial port x1
	* SPDIF In x1
	* SPDIF Out x1
	* USB 2.0 connector x 4, headers x4 (connecting cable option)
	* 8-channel Audio connector (Line-in, Line-out, MIC/ 8CH Audio)

1-3 Performance List

The following performance data list is the testing result of some popular benchmark testing programs. These data are just referred by users, and there is no responsibility for different testing data values gotten by users (the different Hardware & Software configuration will result in different benchmark testing results.)

Performance Test Report

CPU:	Intel Pentium 4 Prescott 3.4G(CIE)

Chapter 2

Hardware Installation

2-1 Hardware Installation Steps

Before using your computer, you had better complete the following steps:

- 1. Check motherboard jumper setting
- 2. Install CPU and Fan
- 3. Install System Memory (DIMM)
- 4. Install Expansion cards
- 5. Connect IDE and Floppy cables, Front Panel /Back Panel cable
- 6. Connect ATX Power cable
- 7. Power-On and Load Standard Default
- 8. Reboot
- 9. Install Operating System
- 10. Install Driver and Utility

2-2 Checking Motherboard's Jumper Setting

(1) CMOS RAM Clear (3-pin) : JBAT

A battery must be used to retain the motherboard configuration in CMOS RAM short 1-2 pins of JPAT to store the CMOS data.

To clear the CMOS, follow the procedure below:

- 1. Turn off the system and unplug the AC power
- 2. Remove ATX power cable from ATX power connector
- 3. Locate JPAT and short pins 2-3 for a few seconds
- 4. Return JPAT to its normal setting by shorting pins 1-2
- 5. Connect ATX power cable back to ATX power connector

Note: When should clear CMOS

- 1. Troubleshooting
- 2. Forget password
- 3. After over clocking system boot fail

(2) Keyboard function Enabled/Disabled: JP1

(3) USB Power On function Enabled/Disabled: JP3

2-3 Install CPU

2-3-1 Glossary

Chipset (or core logic) - two or more integrated circuits which control the interfaces between the system processor, RAM, I/O devises, and adapter cards.

Processor slot/socket/LGA - the slot or socket used to mount the system processor on the motherboard.

Slot (PCI-E, PCI, RAM) - the slots used to mount adapter cards and system RAM.

PCI - **P**eripheral Component Interconnect - a high speed interface for video cards, sound cards, network interface cards, and modems; runs at 33MHz.

PCI Express- Peripheral Component Interconnect Express- a high speed interface for video cards, sound cards, network interface cards, and modems

Serial Port - a low speed interface typically used for mouse and external modems.

Parallel Port - a low speed interface typically used for printers.

PS/2 - a low speed interface used for mouse and keyboards.

USB - Universal Serial Bus - a medium speed interface typically used for mouse, keyboards, scanners, and some digital cameras.

Sound (interface) - the interface between the sound card or integrated sound connectors and speakers, MIC, game controllers, and MIDI sound devices.

LAN (interface) - Local Area Network - the interface to your local area network.

BIOS (Basic Input/Output System) - the program logic used to boot up a computer and establish the relationship between the various components.

Driver - software, which defines the characteristics of a device for use by another device or

other software.

Processor - the "central processing unit" (CPU); the principal integrated circuit used for doing the "computing" in "personal computer"

Front Side Bus Frequency - the working frequency of the motherboard, which is generated by the clock generator for CPU, DRAM and PCI BUS.

CPU L2 Cache - the flash memory inside the CPU, normally Athlon CPU has 256K or above, while Duron will have 64K.

2-3-2 About Intel Pentium 4 LGA775 CPU

This motherboard provides a 775-pin surface mount, LGA775 Land Grid Array socket, referred to as the LGA775 socket supports Intel Pentium 4 processor in the 775 Pin package utilizes Flip-Chip Land Grid Array (FC-LGA4) package technology.

The CPU that comes with the motherboard should have a cooling FAN attached to prevent overheating. If this is not the case, then purchase a correct cooling FAN before you turn on your system.

WARNING! Be sure that there is sufficient air circulation across the processor's heatsink and CPU cooling FAN is working correctly, otherwise it may cause the processor and motherboard overheat and damage, you may install an auxiliary cooling FAN, if necessary.

To install a CPU, first turn off your system and remove its cover. Locate the LGA775 socket and open it by first pulling the level sideways away from the socket then upward to a 90-degree angle. Insert the CPU with the correct orientation as shown below. The notched corner should point toward the end of the level. Because the CPU has a corner pin for two of the four corners, the CPU will only fit in the orientation as shown.

When you put the CPU into the LGA775 socket. No force require to insert of the CPU, then press the level to Locate position slightly without any extra force.

2-3-3 LGA 775 CPU Installation Guide

Socket Preparation

1. Opening the socket:

Note: Apply pressure to the corner with right hand thumb while opening/closing the load lever, otherwise lever can bounce back like a "mouse trap" and WILL cause bent contacts (when

loaded)

- Disengage Load Lever by depressing down and out on the hook to clear retention tab
- ii. Rotate Load Lever to fully open position at approximately 135degrees
- iii. Rotate Load Plate to fully open position at approximately 100degrees

2. Remove PnP Cap (Pick & Place Cap)

- i. With left hand index finger and thumb to support the load plate edge, engage PnP cap with right hand thumb and peel the cap from LGA775 Socket while pressing on center of PnP cap to assist in removal.
- ii. Set PnP cap aside. Always put PnP cap back on if the processor is removed from the socket.
- iii. Visually inspect PnP cap for damage. If damage observed, replace the PnP cap.

Note: After PnP cap removal, make sure socket load plate and contacts are free of foreign material; Refer to Overview Module for FM cleaning.

Note: Optionally, remove PnP cap after CPU insertion. This will compromise the ability to visually inspect socket.

3. Visually inspect for bent contacts (Recommend at least 1stpass visual inspection)

- **NOTE:** Refer to the Handling and Inspection Module for 1stand 2ndpass inspection details.
- NOTE: Glove images are for illustrative purposes only. Please consult local safety guidelines for specific requirements
- **NOTE**: Recommend not to hold the load plate as a lever, instead hold at tab with left hand, removing the PnP cap with right hand

Press to remove Pin 1 Indicator

- 775- Land LGA Package Insertion
 - 1. Lift processor package from shipping media by grasping the substrate edges ONLY.
 - Note: Orient processor package such that the Pin 1 triangle mark is on bottom left and both key notches are on left side
 - Land Side Cover Handling: Remove land side cover 2. with the opposite hand by depressing larger retention tab and peeling the cover away
 - Set and reserve the land side cover aside. 3. Note: Always keep the land side cover on the processor when not in the socket.
 - 4. Visually inspect the package gold pads: Scan the processor package gold pad array for presence of foreign material. Refer to Overview Module for FM cleaning recommendations
 - 5. Orient the package with IHS up. Locate Pin 1 and the two orientation key notches
 - 6. Carefully place the package into the socket body using a purely vertical motion

CAUTION: Using Vacuum Pen for installation is not recommended

Alignment Key

Alianment Ke

- 7. Verify that package is within the socket body and properly mated to the orient keys
- 8. Close the socket by
- Rotating the Load Plate onto the package HIS i. .
- While pressing down lightly on Load Plate, engage ii. the Load Lever.
- iii. Securing Load Lever with Load Plate tab under retention tab of Load Lever

775- Land Package Removal

1. Open the Load Plate/Lever with both hands:

With left hand index finger and thumb to support the load plate edge, engage PnP cap with right hand thumb and peel the cap from LGA775 Socket while pressing on center of PnP cap to assist in removal.

- 2. Pick up 775-land LGA package:
 - By Vacuum Pen: Place a minimum 9-mm cup at approximately the center of IHS.

Recommend not to place Vacuum Pen on IHS edge. Risk of dropping and causing bent contact. Recommend not to use Vacuum Pen for inserting CPU By Hand: Index finger to hold load plate hinge side and thumb to hold load lever side

- 3. Lift the package straight up and away.
- 4. Assemble processors land side cover immediately to prevent contamination.
- i. While holding the processor by the 3 corners, the other hand lift land side cover from work surface by grasping at the large retention tabs. Ensure retention tabs and package are pointing each other.
- ii. Orientate so that land side cover chamfer is matching with package Pin 1 location.
- iii. Hook the first large retention tab on the package substrate. Then press the opposite tab onto the substrate.
- iv. Place processor with land side cover installed

proper shipping media or other ESD approved work surface

5. Visually inspect socket contact array

- 1. First Pass Inspection
- i. Scan socket contact array at varying angles noting the presence of any foreign material
- ii. If foreign material can't be blown off by compressed air, or mechanical damage (Mode1 or 4) observed, reject the motherboard for further evaluation or socket replacement.
- 2. Second Pass Inspection
- i. Repeat 2 more times to sight down the rows and columns from each of the 4 sides of the socket to ensure all contacts within the array are inspected
- ii. Inspect for Mode2, Mode3, and Mode5 failures
- Note: Refer to the Test Module for detail visual inspections

6. Assemble LGA775 socket PnP cap

- i. Secure/Hook the back side of PnP cap.
- ii. Snap down the front side to fully secure
- 7. Close the Socket

Intel Reference Thermal Solution Assembly

NOTE: Depending on the configuration, Thermal Solution Integration procedure could perform with M/B alone or with M/B in the Chassis.

- Place motherboard on support structure providing minimum 0.150-inch backside clearance
- Apply 300 mg of Thermal Interface Material (Shin-Etsu G751) onto center of IHS

Fastener Cap not resting against spring

Fastener flush against MB

NOTE: Thermal Solutions that come with IntelR boxed processor use pre-applied thermal interface material and not grease.

- 3. Remove Heat Sink (HS) from packaging media
- 4. Place HS onto the LGA775 Socket
- Ensure fan cables are oriented on side closest to fan header
- Align Fasteners with MB through-holes
- 5. Inspection
- Ensure cables are not trapped or interfere fastener operation
- Ensure fastener slots are pointing straight out from heatsink

- 6. Actuate fasteners
- While holding HS to prevent tilting, press down on fastener caps with thumb to install and lock Repeat with remaining fasteners
- 7. Inspection
- Verify the fasteners are properly seated
- Ensure both fastener cap and base are flush with spring and motherboard
- 8. Connect fan header with Board header

9. Secure excess cable with tie-wrap to ensure cable does not interfere with fan operation or contact other components.

Intel Reference Thermal Solution Disassembly

- 1. Rotate fastener cap. turn to un-lock
- 2. Pull up fastener cap to un-seat 12
- 1. Disconnect fan cable from motherboard header
- 2. Turn fastener caps (4) counter-clock wise 90degrees to the un-locked position
- A flat-bladed screwdriver may be used if required
- 3. Pull up on fastener caps to unseat
- 4. Manually remove HS with gentle twist motion.
- 5. To re-assemble the HS, reset the fastener caps to their original position with the slot perpendicular to the HS. Then, follow the assembly instructions.

Note: Thermal grease should be reapplied

TIM and Grease Removal from CPU

- 1. Remove the heatsink from the socket
- 2. Gently push loose thermal interface material (TIM) to center of processor (pictures 2 and 3)
- 3. Remove pieces with dry cloth (picture 4)
- 4. Wipe with dry, lint-free cloth to remove most of the material (picture 5)
- 5. Wet another lint-free cloth with isopropyl alcohol (IPA) and wipe to clean remaining material (picture 6)
- 6. Be careful to remove material from gaps between processor and load plate
- 7. For thermal grease removal use Step 4-6

TIM and Grease Removal from Heat-sink

- Note: Remove and replace the TIM from the heatsink if you are re-using the heatsink on a new processor
- 1. Use dry, lint-free cloth and wipe package to remove most of the material
- 2. Wet another lint-free cloth with isopropyl alcohol (IPA) and wipe heatsink to clean remaining material

Replacing Damaged Fasteners

- To prevent damage, avoid setting the thermal solution with the prongs down
- Set on heatsink side or with fan down
- The plastic fasteners on the heatsink can be replaced.
- Use Shop Intel to order spare fasteners
- <u>http://www.shop-intel.com</u>
- To remove a damaged fastener

Note: Protective gloves are not required for this procedure

- Rotate the black pin counterclockwise until it "snaps". There will be some resistance
- Remove the black pin from the white prong
- Tilt the white prong to remove it from the heatsink leg

Avoid damage, avoid placing prongs on hard surface

Damaged. Attempts to straighten not recommended

Replacing Fasteners

- To **replace** the fastener
- Start with the white prong
- Note the "keying" notch feature
- Tilt the prong to insert into the heatsink leg.
- Holding the white prong without bending it, push the black pin on from the bottom until you hear a single "click"

Note: The black pin and white prong will only "snap" on in one orientation

 Check to ensure the black pin is rotated properly for installation with the slot perpendicular to the heat sink

2-4 Install Memory

This motherboard provides two 240-pin DDR2 DUAL INLINE MEMORY MODULES (DIMM) sockets for DDR2 memory expansion available from minimum memory volume of 128MB to maximum memory volume of 2.0GB DDR2 SDRAM.

Bank	240-Pin DIMM	PCS	Total Memory
Bank 0, 1 (DIMM1)	DDR2 400/DDR2 533	X1	128MB~1.0GB
Bank 2, 3 (DIMM2)	DDR2 400/DDR2 533	X1	128MB~1.0GB
Total	Memory (Max. 2.0GB)	2	128MB~2.0GB

Valid Memory Configurations

Recommend	DIMM	Module	Combination
1000011011001000		111000000	comornanon

- 1. One DIMM Module ----Plug in DIMM1
- 2. Two DIMM Modules---Plug in DIMM1 and DIMM3 for Dual channel function

For Dual channel Limited!

NOTE!

- 3. Dual channel function only supports when 2 DIMM Modules plug in either both DIMM1 & DIMM3.
- 4. DIMM1 & DIMM3 must be the same type, same size, same frequency for dual channel function.

Install DDR2 SDRAM modules to your motherboard is not difficult, you can refer to figure below to see how to install a 240-Pin DDR2 400/DDR2 533 SDRAM module.

When you install DIMM module fully into the DIMM socket the eject tab should be locked into the DIMM module very firmly and fit into its indention on both sides.

WARNING! For the DDR SDRAM CLOCK is set at 266MHz, use only DDR2 533- compliant DDR2 Modules. When this motherboard operate at 266Mhz, most system will not even boot if noncompliant modules are used because of the strict timing issues, if your DDR Modules are not DDR2 533-compliant, set the SDRAM clock to 133MHz to ensure system stability.

2-5 Expansion Cards

WARNING! Turn off your PC while adding or removing expansion cards or other system components. Failure to do so may cause severe damage to both your motherboard and expansion cards.

2-5-1 Procedure For Expansion Card Installation

- 1. Read the documentation for your expansion card and make any necessary hardware or software setting for your expansion card such as jumpers.
- 2. Remove your computer's cover and the bracket plate on the slot you intend to use.
- 3. Align the card's connectors and press firmly.
- 4. Secure the card on the slot with the screen you remove above.
- 5. Replace the computer system's cover.
- 6. Set up the BIOS if necessary.
- 7. Install the necessary software driver for your expansion card.

2-5-2 Assigning IRQs For Expansion Card

Some expansion cards need an IRQ to operate. Generally, an IRQ must exclusively assign to one use. In a standard design, there are 16 IRQs available but most of them are already in use.

IRQ	Priority	Standard function
0	N/A	System Timer
1	N/A	Keyboard Controller
2	N/A	Programmable Interrupt
3 *	8	Communications Port (COM2)
4 *	9	Communications Port (COM1)
5 *	6	Sound Card (sometimes LPT2)
6 *	11	Floppy Disk Controller
7 *	7	Printer Port (LPT1)
8	N/A	System CMOS/Real Time Clock
9 *	10	ACPI Mode when enabled
10 *	3	IRQ Holder for PCI Steering
11 *	2	IRQ Holder for PCI Steering
12 *	4	PS/2 Compatible Mouse Port
13	N/A	Numeric Data Processor
14 *	5	Primary IDE Channel
15 *	1	Secondary IDE Channel

Standard Interrupt Assignments

* These IRQs are usually available for ISA or PCI devices.

2-5-3 Interrupt Request Table For This Motherboard

	INT A	INT B	INT C	INT D	INT E	INT F	INT G	INT H
Slot 1	\checkmark							
Slot 2		\checkmark						
Slot 3			\checkmark					
Onboard LAN					\checkmark			
Onboard USB 2				\checkmark				
Onboard USB 3			\checkmark					
Sound		\checkmark						

Interrupt request are shared as shown the table below:

IMPORTANT!

If using PCI cards on shared slots, make sure that the drivers support "Shared IRQ" or that the cards don't need IRQ assignments. Conflicts will arise between the two PCI groups that will make the system unstable or cards inoperable.

2-5-4 PCI Express Slot

The motherboard offers one PCI-Express x16 graphics slot of 4Gbyte/sec data transfer rate at each relative direction which get 3.5 times of bandwidth more than AGP8X and it's up to a peak concurrent bandwidth of 8Gbyte/sec at full speed to guarantee the fully operational GPU graphics power. Three 32-bit PCI slots guarantee the rich connectivity for the I/O peripheral devices. Two PCI Express x1 I/O slot offers 512Mbyte/sec concurrently, over 3.5 times more bandwidth than PCI at 133Mbye/sec, tackling the most demanding multimedia tasks nowadays.

2-6 Connectors, Headers 2-6-1 Connectors

(1) Power Connector (24-pin block) : ATXPWR24P

ATX Power Supply connector. This is a new defined 24-pins connector that usually comes with ATX case. The ATX Power Supply allows to use soft power on momentary switch that connect from the front panel switch to 2-pins Power On jumper pole on the motherboard. When the power switch on the back of the ATX power supply turned on, the full power will not come into the system board until the front panel switch is momentarily pressed. Press this switch again will turn off the power to the system board.

- ** We recommend that you use an ATX 12V Specification 2.0-compliant power supply unit (PSU) with a minimum of 350W power rating. This type has 24-pin and 4-pin power plugs.
- ** If you intend to use a PSU with 20-pin and 4-pin power plugs, make sure that the 20-pin power plug can provide at least 15A on +12V and the power supply unit has a minimum power rating of 350W. The system may become unstable or may not boot up if the power is inadequate.

(2) ATX 12V Power Connector (4-pin block) : ATX12V

This is a new defined 4-pins connector that usually comes with ATX Power Supply. The ATX Power Supply which fully support Pentium 4 processor must including this connector for support extra 12V voltage to maintain system power consumption. Without this connector might cause system unstable because the power supply can not provide sufficient current for system.

(3) USB Port connector: USB1

The connectors are 4-pin connector that connect USB devices to the system board.

(4) LAN Port connector: UL1

This connector is standard RJ45 over USB connector. (Gigabit LAN for 945PLDAG-V6)

(5) PS/2 Mouse & PS/2 Keyboard Connector: KB1 (PS2 KB/MOUSE)

The connectors for PS/2 keyboard and PS/2 Mouse.

(6) Parallel Port Connector (25-pin female): PARALLEL

Parallel Port connector is a 25-pin D-Subminiature Receptacle connector. The On-board Parallel Port can be disabled through the BIOS SETUP. Please refer to Chapter 3 "INTEGRATED PERIPHERALS SETUP" section for more detail information.

(7) SPDIF In/Out Connector: SPDIF_IN/OUT

The SPDIF output is capable of providing digital audio to external speakers or compressed AC3 data to an external Dolby digital decoder. Use this feature only when your stereo system has digital input function. Use SPDIF IN feature only when your device has digital output function.

(8) Audio Line-In, Lin-Out, MIC, Surrback, Surround, GEN/LEF Connector : PHONE_JACK(6 Channel Audio for 945PLDAG-V6&945PLDAS-V6)

This Connector are 6 phone Jack for LINE-OUT, LINE-IN, MIC, Surrback, Surround, GEN/LEF

Line-out : (GREEN)Audio output to speakerLine-in : (BLUE)Audio input to sound chipMIC : (PINK)Microphone ConnectorSurrback : (ORANGE)Audio output to speaker-Rear speaker outCEN / LFE : (BLACKNESS)Audio output to speaker-Center/Subwoofer speaker outSurround: (GRAY)Audio output to speaker-Side speaker out

(9) Serial Port COM2

COM2 is the 9-pin D-Subminiature male connector. The On-board serial port can be disabled through BIOS SETUP. Please refer to Chapter 3 "INTEGRATED PERIPHERALS SETUP" section for more detail information.

(10) Floppy drive Connector (34-pin block): FDD

This connector supports the provided floppy drive ribbon cable. After connecting the single plug end to motherboard, connect the two plugs at other end to the floppy drives.

(11) Ultra ATA100 IDE Connector (40-pin block): IDE1 (Support ATA 100)

This connector supports the provided IDE hard disk ribbon cable. After connecting the single plug end to motherboard, connect the two plugs at other end to your hard disk(s). If you install two hard disks, you must configure the second drive to Slave mode by setting its jumpers accordingly. Please refer to the documentation of your hard disk for the jumper settings.

- Two hard disks can be connected to each connector. The first HDD is referred to as the "Master" and the second HDD is referred to as the "Slave".
- For performance issues, we strongly suggest you don't install a CD-ROM or DVD-ROM drive on the same IDE channel as a hard disk. Otherwise, the system performance on this channel may drop.

(12) Serial-ATA2 Port connector: SATA1/SATA2/SATA3/SATA4

This connector supports the provided Serial ATA2 IDE hard disk cable connect to the motherboard and serial ATA hard disk.

2-6-2 Headers

(1) Line-Out, MIC Header (9-pin): AUDIO

This header connect to Front Panel Line-out, MIC connector with cable.

(2) USB Port Headers (9-pin) : USB2, USB3

The header is used for connecting the additional USB port plug. By attaching an option USB cable, you can be provided with two additional USB plugs affixed to the back panel.

(3) IDE Activity LED: IDE LED

This connector connects to the hard disk activity indicator light on the case.

(4) Reset switch led: RESET

This 2-pin connector connects to the case-mounted reset switch for rebooting your computer without having to turn off your power switch. This is a preferred method of rebooting in order to prolong the lift of the system's power supply. See the figure below.

(5) Power LED: PWR-LED

The Power LED is light on while the system power is on. Connect the Power LED from the system case to this pin.

(6) Speaker connector: SPEAK

This 4-pin connector connects to the case-mounted speaker. See the figure below.

(7) **Power switch: PWR BTN**

This 2-pin connector connects to the case-mounted power switch to power ON/OFF the system.

(8) FAN Power Headers: SYSFAN1, SYSFAN2 (3-pin), CPUFAN (4-pin)

These connectors support cooling fans of 350mA (4.2 Watts) or less, depending on the fan manufacturer, the wire and plug may be different. The red wire should be positive, while the black should be ground. Connect the fan's plug to the board taking into consideration the polarity of connector.

(9) IR infrared module Headers (5-pin) : IR

This connector supports the optional wireless transmitting and receiving infrared module. You must configure the setting through the BIOS setup to use the IR function.

(10) CD Audio-In Headers (4-pin) : CDIN CDIN are the connectors for CD-Audio Input signal. Please connect it to CD-ROM CD-Audio output connector.

(11) COM1 Header: COM1

COM1 is for the serial devices, such as the joystick, the scanner and so on.

2-7 Starting Up Your Computer

- 1. After all connection are made, close your computer case cover.
- 2. Be sure all the switch are off, and check that the power supply input voltage is set to proper position, usually in-put voltage is 220V~240V or 110V~120V depending on your country's voltage used.
- 3. Connect the power supply cord into the power supply located on the back of your system case according to your system user's manual.
- 4. Turn on your peripheral as following order:
 - a. Your monitor.
 - b. Other external peripheral (Printer, Scanner, External Modem etc...)
 - c. Your system power. For ATX power supplies, you need to turn on the power supply and press the ATX power switch on the front side of the case.
- 5. The power LED on the front panel of the system case will light. The LED on the monitor may light up or switch between orange and green after the system is on. If it complies with green standards or if it is has a power standby feature. The system will then run power-on test. While the test are running, the BIOS will alarm beeps or additional message will appear on the screen.

If you do not see any thing within 30 seconds from the time you turn on the power. The system may have failed on power-on test. Recheck your jumper settings and connections or call your retailer for assistance.

Веер	Meaning	
One short beep when displaying logo	No error during POST	
Long beeps in an endless loop	No DRAM install or detected	
One long beep followed by three short beeps	Video card not found or video card memory bad	
High frequency beeps when system is	CPU overheated	
working	System running at a lower frequency	

6. During power-on, press <Delete> key to enter BIOS setup. Follow the instructions in BIOS SETUP.

7. Power off your computer: You must first exit or shut down your operating system before switch off the power switch. For ATX power supply, you can press ATX power switching after exiting or shutting down your operating system. If you use Windows 9X, click "Start" button, click "Shut down" and then click "Shut down the computer?" The power supply should turn off after windows shut down.

Chapter 3

Introducing BIOS

The BIOS is a program located on a Flash Memory on the motherboard. This program is a bridge between motherboard and operating system. When you start the computer, the BIOS program gain control. The BIOS first operates an auto-diagnostic test called POST (power on self test) for all the necessary hardware, it detects the entire hardware device and configures the parameters of the hardware synchronization. Only when these tasks are completed done it gives up control of the computer to operating system (OS). Since the BIOS is the only channel for hardware and software to communicate, it is the key factor for system stability, and in ensuring that your system performance as its best.

In the BIOS Setup main menu of Figure 3-1, you can see several options. We will explain these options step by step in the following pages of this chapter, but let us first see a short description of the function keys you may use here:

- Press <Esc> to quit the BIOS Setup.
- Press $\uparrow \downarrow \leftarrow \rightarrow$ (up, down, left, right) to choose, in the main menu, the option you want to confirm or to modify.
- Press <F10> when you have completed the setup of BIOS parameters to save these parameters and to exit the BIOS Setup menu.
- Press Page Up/Page Down or +/- keys when you want to modify the BIOS parameters for the active option.

3-1 Entering Setup

Power on the computer and by pressing immediately allows you to enter Setup.

If the message disappears before your respond and you still wish to enter Setup, restart the system to try again by turning it OFF then ON or pressing the "RESET" button on the system case. You may also restart by simultaneously pressing <Ctrl>, <Alt> and <Delete> keys. If you do not press the keys at the correct time and the system does not boot, an error message will be displayed and you will again be asked to

Press <F1> to continue, <Ctrl-Alt-Esc> or to enter Setup

3-2 Getting Help

Main Menu

The on-line description of the highlighted setup function is displayed at the bottom of the screen.

Status Page Setup Menu/Option Page Setup Menu

Press F1 to pop up a small help window that describes the appropriate keys to use and the possible selections for the highlighted item. To exit the Help Window, press <Esc>.

3-3 The Main Menu

Once you enter Award[®] BIOS CMOS Setup Utility, the Main Menu (Figure 3-1) will appear on the screen. The Main Menu allows you to select from fourteen setup functions and two exit choices. Use arrow keys to select among the items and press <Enter> to accept or enter the sub-menu.

Figure 3-1

Standard CMOS Features

Use this Menu for basic system configurations.

_ 1

Advanced BIOS Features

Use this menu to set the Advanced Features available on your system.

Advanced Chipset Features

Use this menu to change the values in the chipset registers and optimize your system's performance.

Integrated Peripherals

Use this menu to specify your settings for integrated peripherals.

Power Management Setup

Use this menu to specify your settings for power management.

Miscellaneous Control

Use this menu to specify your settings for Miscellaneous control.

PC Health Status

This entry shows your PC health status.

Bi-Turbo Configurations

This entry appears if your system supports BiTurbo Configurations.

Power User Overclock Settings

Use this menu to specify your settings (frequency, Voltage) for overclocking demand

Password Settings

This entry for setting Supervisor password and User password

Load Optimized Defaults

Use this menu to load the BIOS default values these are setting for optimal performances system operations for performance use.

Load Standard Defaults

Use this menu to load the BIOS default values for the stable performance system operation that are factory settings for normal use.

Save & Exit Setup

Save CMOS value changes to CMOS and exit setup.

Exit Without Saving

Abandon all CMOS value changes and exit setup.

3-4 Standard CMOS Features

The items in Standard CMOS Setup Menu are divided into several categories. Each category includes no, one or more than one setup items. Use the arrow keys to highlight the item and then use the $\langle PgUp \rangle$ or $\langle PgDn \rangle$ keys to select the value you want in each item.

Phoenix - AwardBIOS CMOS Setup Utility

Date

The date format is <day><month><date><year>.

Day Day of the week, from Sun to Sat, determined by BIOS. Read-only.

Month The month from Jan. through Dec.

Date The date from 1 to 31 can be keyed by numeric function keys.

Year The year depends on the year of the BIOS.

Time

The time format is <hour><minute><second>.

IDE Channel 0 Master / Channel 0 Slave / Channel 1 Master / Channel 1 Slave SATA Channel 1, 2, 3, 4

Press PgUp/<+> or PgDn/<-> to select Manual, None, Auto type. Note that the specifications of your drive must match with the drive table. The hard disk will not work properly if you enter improper information for this category. If the type of hard disk drives is not matched or listed, you can use Manual to define your own drive type manually.

If you select Manual, related information is asked to be entered to the following items. Enter the information directly from the keyboard. This information should be provided in the documentation from your hard disk vendor or the system manufacturer.

If the controller of HDD interface is SCSI, the selection shall be "None".

If the controller of HDD interface is CD-ROM, the selection shall be "None"

Advanced BIOS Features

Virus Warning

Allows you to choose the VIRUS Warning feature for IDE Hard Disk boot sector protection. If this function is enabled and someone attempt to write data into this area, BIOS will show a warning message on screen and alarm beep.

Disabled (default) No warning message to appear when anything attempts to access the boot sector or hard disk partition table.

Enabled Activates automatically when the system boots up causing a warning message to appear when anything attempts to access the boot sector of hard disk partition table.

CPU L1&L2 Cache

The default value is Enabled.

Enabled (default) Enable cache **Disabled** Disable cache

Note: The L1&L2 *cache is built in the processor.*

Hard Disk Boot Priority

The selection is for you to choose the hard disk drives priorities to boot from.

Quick Power On Self Test

This category speeds up Power On Self Test (POST) after you power on the computer. If this is set to Enabled. BIOS will shorten or skip some check items during POST.

Enabled (default)Enable quick POSTDisabledNormal POST

First/Second/Third Boot Device

The BIOS attempts to load the operating system from the devices in the sequence selected in these items. The settings are Removable, Hard Disk, CDROM, Legacy LAN, CDROM and Disabled.

Boot Up Floppy Seek

During POST, BIOS will determine if the floppy disk drive installed is 40 or 80 tracks. 360K type is 40 tracks while 760K, 1.2M and 1.44M are all 80 tracks.

Boot Up NumLock Status

The default value is On.

On (default) Keypad is numeric keys.

Off Keypad is arrow keys.

Gate A20 Option

NormalThe A20 signal is controlled by keyboard controller or chipset hardware.Fast (default)The A20 signal is controlled by port 92 or chipset specific method.

Typematic Rate Setting

Keystrokes repeat at a rate determined by the keyboard controller. When enabled, the typematic rate and typematic delay can be selected. The settings are: Enabled/Disabled.

Typematic Rate (Chars/Sec)

Sets the number of times a second to repeat a keystroke when you hold the key down. The settings are: 6, 8, 10, 12, 15, 20, 24, and 30.

Typematic Delay (Msec)

Sets the delay time after the key is held down before is begins to repeat the keystroke. The settings are 250, 500, 750, and 1000.

Security Option

This category allows you to limit access to the system and Setup, or just to Setup.

System	The system will not boot and access to Setup will be denied if the
	correct password is not entered at the prompt.
Setup (default)	The system will boot, but access to Setup will be denied if the correct
	password is not entered prompt.

APIC MODE

This field is used to enable or disable the APIC(Advanced Programmable Interrupt Controller). Due to compliance with PC2004 design guide, the system is able to run in APIC mode. Enabling APIC mode will expand available IRQ resources for the system. Settings:[Enabled] and [disabled].

MPS Version Control For OS

This field allows you to select which MPS(Multi-Processor Specification) version to be used for the operating system. You need to select the MPS version supported by your operating system. To find out which version to use, Consult the vendor of your operating system. Settings:[1.4],[1.1].

OS Select For DRAM > 64MB

Allows $OS2^{\textcircled{R}}$ to be used with >64MB or DRAM. Settings are Non-OS/2 (default) and OS2. Set to OS/2 if using more than 64MB and running OS/2.

3-6 Advanced Chipset Features

The Advanced Chipset Features Setup option is used to change the values of the chipset registers. These registers control most of the system options in the computer.

Advanced Chipset Features

Phoenix - AwardBIOS CMOS Setup Utility Advanced Chipset Features

SDRAM RAS-to-CAS Delay

This field let's you insert a timing delay between the CAS and RAS strobe signals, used when DRAM is written to, read from, or refreshed. *Fast* gives faster performance; and *Slow* gives more stable performance. This field applies only when synchronous DRAM is installed in the system. The settings are: 4T and 3T.

SDRAM RAS Precharge Time

If an insufficient number of cycles is allowed for the RAS to accumulate its charge before DRAM refresh, the refresh may be incomplete and the DRAM may fail to retain date. *Fast* gives faster performance; and *Slow* gives more stable performance. This field applies only when synchronous DRAM is installed in the system. The settings are: 2T and 3T.

PCIExpress Root Port Function

Please refer to section 3-6-1

System BIOS Cacheable

Selecting Enabled allows caching of the system BIOS ROM at F0000h-FFFFFh, resulting in better system performance. However, if any program writes to this memory area, a system error may result. The settings are: Enabled and Disabled.

Video BIOS Cacheable

Select Enabled allows caching of the video BIOS, resulting in better system performance. However, if any program writes to this memory area, a system error may result. The settings are: Enabled and Disabled.

Memory Hole At 15M-16M

You can reserve this area of system memory for ISA adapter ROM. When this area is reserved, it cannot be cached. The user information of peripherals that need to use this area of system memory usually discusses their memory requirements. The settings are: Enabled and Disabled.

OnChip Primary/Secondary PCI IDE

The integrated peripheral controller contains an IDE interface with support for two IDE channels. Select *Enabled* to activate each channel separately. The settings are: Enabled and Disabled.

IDE Primary/Secondary Master/Slave PIO

The four IDE PIO (Programmed Input/Output) fields let you set a PIO mode (0-4) for each of the four IDE devices that the onboard IDE interface supports. Modes 0 through 4 provide successively increased performance. In Auto mode, the system automatically determines the best mode for each device. The settings are: Auto, Mode 0, Mode 1, Mode 2, Mode 3, Mode 4.

IDE Primary/Secondary Master/Slave UDMA

Ultra DMA/33 implementation is possible only if your IDE hard drive supports it and the operating environment includes a DMA driver (Windows 95 OSR2 or a third-party IDE bus master driver). If your hard drive and your system software both support Ultra DMA/33 and Ultra DMA/66, select Auto to enable BIOS support. The settings are: Auto, Disabled.

IDE HDD Block Mode

Block mode is also called block transfer, multiple commands, or multiple sector read/write. If your IDE hard drive supports block mode (most new drives do), select Enabled for automatic detection of the optimal number of block read/writes per sector the drive can support. The settings are: Enabled, Disabled.

3-7-2 Onchip Device Function

Phoenix - AwardBIOS CMOS Setup Utility

Onboard Device Function

RealTek LAN Function	Enabled	Item Help
RealTek LAN BootROM	Disabled	
USB Host Controller	Enabled	Menu Level >>
USB2.0 Function		
USB Reyboard Legacy Support	DISabled

$\uparrow \downarrow \rightarrow \leftarrow$ Move Enter:Select +/-	/PU/PD:Value F10:Save	ESC:Exit F1:General Help
F5:Previous Values F6:	Optimized Defaults	F7:Standard Defaults

RealTek LAN Function

Setting to [Enabled] allows the BIOS to auto-detect the LAN controller and enable it. Setting options: [Enabled] and [Disabled].

USB Host Controller

Select *Enabled* if your system contains a Universal Serial Bus (USB) controller and you have a USB peripherals. The settings are: Enabled, Disabled.

USB 2.0 Function

This setting allows you to enable/disable the onboard USB controller. Selecting [Enabled] enables the system to support USB 2.0 spec. setting options:[Disabled],[Enabled].

USB Keyboard Legacy Support

Select *Enabled* if your system contains a Universal Serial Bus (USB) controller and you have a USB keyboard. The settings are: Enabled, Disabled.

AC'97 Audio

The selection for you to choose the embedded Audio function or 3rd party audio interface installed. The settings are: Enabled, Disabled, and Auto.

3-7-3 Onboard Super IO Function

Phoenix - AwardBIOS CMOS Setup Utility

Onboard Super IO Function

Onboard FDD Controller Onboard Serial Port 1	Enabled 3F8/IRQ4	Item Help
Onboard Serial Port 2	2F8/IRQ3	
UARIZ Mode Select	Normal	Menu Level >>
IR Duplex Mode		
Darallel Port Mode		
FCD Mode Lige DMA	2	
ECF MODE USE DMA	5	
$\uparrow \downarrow \rightarrow \leftarrow$ Move Enter:Select	+/-/PU/PD:Value F10:Save	ESC:Exit F1:General Help
F5:Previous Values	F6:Optimized Defaults	F7:Standard Defaults

Onboard FDD Controller

Select Enabled if your system has a floppy disk controller (FDD) installed on the system board and you wish to use it. If you install add-on FDC or the system has no floppy drive, select Disabled in this field. The settings are: Enabled and Disabled.

Onboard Serial Port 1/Port 2

Select an address and corresponding interrupt for the first and the second serial ports. The settings are: 3F8/IRQ4, 2E8/IRQ3, 3E8/IRQ4, 2F8/IRQ3, Disabled, Auto.

UART2 Mode Select

This item allows you to determine which InfraRed(IR) function of the onboard I/O chip, this functions uses.

Onboard Parallel Port

There is a built-in parallel port on the on-board Super I/O chipset that Provides Standard, ECP, and EPP features. It has the following option:

Disabled

(3BCH/IRQ7)/	Line Printer port 0
(278H/IRQ5)/	Line Printer port 2
(378H/IRQ7)	Line Printer port 1

Parallel Port Mode

SPP : Standard Parallel Port

EPP : Enhanced Parallel Port

ECP : Extended Capability Port

SPP/EPP/ECP/ECP+EPP

To operate the onboard parallel port as Standard Parallel Port only, choose "SPP." To operate the onboard parallel port in the EPP modes simultaneously, choose "EPP." By choosing "ECP", the onboard parallel port will operate in ECP mode only. Choosing "ECP+EPP" will allow the onboard parallel port to support both the ECP and EPP modes simultaneously. The ECP mode has to use the DMA channel, so choose the onboard parallel port with the ECP feature. After selecting it, the following message will appear: "ECP Mode Use DMA" at this time, the user can choose between DMA channels 3 to 1. The onboard parallel port is EPP Spec. compliant, so after the user chooses the onboard parallel port with the ECP function, the following message will be displayed on the screen: "EPP Mode Select." At this time either EPP 1.7 spec. or EPP 1.9 spec. can be chosen.

3-8 Power Management Setup

The Power Management Setup allows you to configure your system to most effectively save energy saving while operating in a manner consistent with your own style of computer use. Phoenix - AwardBIOS CMOS Setup Utility

Power Management Setup

ACPI Function

This item allows you to Enabled/Disabled the Advanced Configuration and Power Management (ACPI). The settings are Enabled and Disabled.

ACPI Suspend Type

This item allows you to select ACPI Suspend Type.

The setting are: S1(POS), S3(STR)

Video Off in Suspend

This determines the manner in which the monitor is blanked. The choice are Yes \rightarrow Video will off, and No \rightarrow Video always On.

Video Off Method

This determines the manner in which the monitor is blanked.

DPMS (default)	Initial display power management signaling.
Blank Screen	This option only writes blanks to the video buffer.
V/H SYNC+Blank	This selection will cause the system to turn off the vertical and
	horizontal synchronization ports and write blanks to the video buffer.

Modem Use IRQ

This determines the IRQ in which the MODEM can use. The settings are: 3, 4, 5, 7, 9, 10, 11, NA.

Soft-off by PWR-BTTN

Pressing the power button for more than 4 seconds forces the system to enter the Soft-Off state. The settings are: Delay 4 Sec, Instant-Off.

Power On by Ring

During Disabled, the system will ignore any incoming call from the modem. During Enabled, the system will boot up if there's an incoming call from modem.

Date(of month) Alarm

You can choose which month the system will boot up. Set to 0, to boot every day.

Time(hh:mm:ss) Alarm

You can choose what hour, minute and second the system will boot up.

Note: If you have change the setting, you must let the system boot up until it goes to the operating system, before this function will work

PM Timer Reload Events

Please refer to section 3-8-1

3-8-1 PM Timer Reload Events

Phoenix - AwardBIOS CMOS Setup Utility Power User Overclock Settings

Host Clock at Next Boot

This item allows you to select CPU frequency step by step increasing. The choice are: 533MHz CPU---133MHz~350MHz, 800MHz CPU---200MHz~350MHz

DRAM Clock at Next Boot

This item allows you select the DRAM Clock for DDR2 533/DDR2 400. The setting are: By SPD, DDR2 533, DDR2 400

CPU Vcore 7-Shift

This item allows you select the CPU Vcore Voltage xx% more than the standard value, by this function for the precise over-clocking for extra demanding of performance.

CPU Vcore Select

This item allows you select CPU Vcore Voltage by increase 0.0125V step by step from 0.8375V to 1.6V or the Default setting is Default (CPU manufacturer Default setting).

VCC 1.5V Output

This item allows you to select 1.5V of the AGP VGA card. The choice are: Default, 1.5V,1.55V,1.6V,1.65V,1.70V,1.80V,1.90V,2.00V.

VDIMM Output

This item allows you to select DRAM Voltage. The choice are: 1.80V,1.85V,1.90V, 2.00V,2.05V,2.10V,2.15V.

3-13 Password Settings

Phoenix - AwardBIOS CMOS Setup Utility

Password Settings

Set Supervisor Password	Press Enter	
Set User Password	Press Enter	Item Help
		Menu Level >
↑↓→← Move Enter:Select + F5:Previous Values	/-/PU/PD:Value F10:Save) F6:Optimized Defaults	ESC:Exit F1:General Help F7:Standard Defaults

You can set either supervisor or user password, or both of them. The differences are:

Supervisor password: User password: Can enter and change the options of the setup menus. Can only enter but do not have the right to change the options of the setup menus. When you select this function, the following message will appear at the center of the screen to assist you in creating a password.

ENTER PASSWORD:

Type the password, up to eight characters in length, and press <Enter>. The password typed now will clear any previously entered password from CMOS memory. You will be asked to confirm the password. Type the password again and press <Enter>. You may also press <Esc> to abort the selection and not enter a password.

To disable a password, just press <Enter> when you are prompted to enter the password. A message will confirm that the password will be disabled. Once the password is disabled, the system will boot and you can enter Setup freely.

PASSWORD DISABLED.

When a password has been enabled, you will be prompted to enter it every time you try to enter Setup. This prevents an unauthorized person from changing any part of your system configuration.

Additionally, when a password is enabled, you can also require the BIOS to request a password every time your system is rebooted. This would prevent unauthorized use of your computer.

You determine when the password is required within the BIOS Features Setup Menu and its Security option. If the Security option is set to "System", the password will be required both at boot and at entry to Setup. If set to "Setup", prompting only occurs when trying to enter Setup.

3-14 Load Standard/Optimized Defaults

Load Standard Defaults

When you press <Enter> on this item, you get confirmation dialog box with a message similar to: Load Standard Defaults (Y/N)? N

Pressing $\langle Y \rangle$ loads the BIOS default values for the most stable, minimal-performance system operations.

Load Optimized Defaults

When you press <Enter> on this item, you get a confirmation dialog box with a message similar to:

Load Optimized Defaults (Y/N)? N

Pressing <Y> loads the default values that are factory settings for optimal performance system operations.

Chapter 4 DRIVER & FREE PROGRAM INSTALLATION

Check your package and there is A MAGIC INSTALL CD included. This CD consists of all DRIVERS you need and some free application programs and utility programs. In addition, this CD also include an auto detect software which can tell you which hardware is installed, and which DRIVERS needed so that your system can function properly. We call this auto detect software MAGIC INSTALL.

MAGIC INSTALL Supports WINDOWS 2000/XP

Insert CD into your CD-ROM drive and the MAGIC INSTALL Menu should appear as below. If the menu does not appear, double-click MY COMPUTER / double-click CD-ROM drive or click START / click RUN / type X:\SETUP.EXE (assuming X is your CD-ROM drive).

The Intel 945 serial chipset driver only support Windows 2000 and Windows XP OS

From MAGIC INSTALL MENU you may make 9 selections:

- 1. INF install Intel 945PL Express Chipset system driver
- 2. SOUND install ALC850 AC97 Codec Audio Driver
- 3. LAN install Intel LAN Controller driver
- 4. USB2.0 install USB 2.0 driver
- 5. DIRECTX9 install Microsoft DirectX 9 driver
- 6. PC-CILLIN install PC-CILLIN2006 anti-virus program
- 7. PC-HEALTH install MyGuard Hardware Doctor Utility
- 8. BROWSE CD to browse the contents of the CD
- 9. EXIT to exit from MAGIC INSTALL menu

4-1 INF Install Intel 945 chipset system driver

1. Click INF in the MAGIC INSTALL MENU

3. This license agreement appear, click Yes, the readme information appear, click Next

2. Click NEXT when Chipset Software Install Utility appears

Setup	
	InstalESheld(R) Wized Complete The InstalEsheld(R) Wized has successfully installed Intel(R) Diport Software Installation UB(). Enforce you can use the program, you and math you computer.
	Yes, I ware to restart my computer now. No. I will restart my computer later.
	Remove any disks from their drives, and then skik Finish to complete setup.
	Fish Frih

4. Select if you want computer re-started click Finish

4-2 SOUND Install ALC850 8-Channel Audio Driver

1. Click SOUND when MAGIC INSTALL MENU appears

2. Click NEXT When Realtek AC97Audio driver windows appears

3. Click FINISH and restart your computer

4. Manual Sound Effect Setting

5. Speaker configuration setting

NOTE: Please upgrade your Windows XP to Service Pack 1 / Windows 2000 to Service Pack 4 or later before you the HD Audio CODEC driver.

4-3 LAN Install Realtek LAN Controller Driver

WINDOWS 2000/XP Setup

1. Click LAN when Magic Install Menu appear

2. Click NEXT, install REALTEK LAN and Fast Ethernet NIC Driver

3. After driver installation completed, Click Finish

PC-HEALTH Install MyGuard Hardware monitor Utility 4-4

1. Click PC-HEALTH when MAGIC INSTALL 2. Click Next when Install shield wizard Window MENU appears

3. Select Finish after setup complete

appears, Choose destination location and click Next, when the start copy file windows appear, click next

4. Execute MY GUARD utility, On-time Monitoring your system health

NOTE:

MAGIC INSTALL will auto detect file path X:\NFORCE4\MYGUARD\SETUP.EXE

4-5 USB2.0 Install Intel USB2.0 DRIVER

Windows 2000 OS

Please install Windows 2000 service pack 4 or later .

Windows XP OS

Please install Windows XP service pack 1 or later .

4-6 PC-CILLIN Install PC-CILLIN 2006 Anti-virus program

1. Click PC-CILLIN when MAGIC INSTALL MENU appears

2. Please select "Install program" when the "Trend Micro internet security" installshield wizard windows appears

3. This is license agreement, select "I Accept the terms" and Click NEXT

5. Click INSTALL, Start to install the software

4. Click NEXT or choose Change to change the path for the file to be stored

Setup Complete and click FINISH

Note : Please install ACROBAT READER for reading PC-CILLIN 2006 User Manual which locates at the path "X:\acrobat\adberdr6_enu_full.exe".

4-7 HOW TO UPDATE BIOS

Before update BIOS users have to "Disable", "Flash Part Write Protect" item which in "Miscellaneous Control" of BIOS SETUP. Otherwise the system the will not allow you to upgrade BIOS by Award Flash Utility.

- **STEP 1.** Prepare a boot disc. (you may make one by click START click RUN type SYS A: click OK)
- **STEP 2.** Copy utility program to your boot disc. You may copy from DRIVER CD X:\FLASH\AWDFLASH.EXE or download from our web site.
- **STEP 3.** Copy latest BIOS for 945PLDAS from our web site to your boot disc.
- STEP 4. Insert your boot disc into A:,

start the computer, type "Awdflash A:\945PLDASxxx.BIN /SN/PY/CC/R" 945PLDAS Axxx.BIN is the file name of latest BIOS it can be 945PLDAS A03.BIN or 945PLDAS CPB02.BIN

- SN means don't save existing BIOS data
- PY means renew existing BIOS data
- CC means clear existing CMOS data
- R means restart computer
- **STEP 5.** Push ENTER and the BIOS will be updated, computer will be restarted automatically.

4-8 **Pro Magic Plus Function Introduction**

What's Pro Magic Plus?

Tired with reinstall OS each time when it doesn't work? Does your computer often crash down or unable to work after installed new software? Have you had great loses and troubles because of computer problems? Still using time-consuming backup software that occupies lots of HD space?

Pro Magic Plus- an instant system recovery software tailored to solve these problems for you. It combines various application tools (e.g. anti-virus, backup software, uninstall software, multi-boot software) to satisfy your needs of all sorts of system protections.

What functions does Pro Magic Plus have?

- 1. **Instant System Restoration** Regardless of mis-operation or system crash, install Pro Magic Plus beforehand would allow you to instantly restore your system back by simply reboot your computer.
- 2. Easy-to-use Auto installation from CD ROM; Supports Mouse
- 3. **System Uninstall** Pro Magic provides a protection mode, which allows user to freely test any software. If user does not want to keep the software, just reboot the computer to restore back to the previous state, and Pro Magic will remove it completely from you computer.
- 4. Password Security Pro Magic provides double password protection, including user password for entering each OS and manager password for managing 'Pro Magic', which can effectively prevent others from using your computer without permission or data from being stolen. (disable item for OEM version)

- 5. **Complete Protection** Pro Magic not only protects the system disk, but also can protect your data disk, and does not require to reboot when backup or restore data disk.
- Multipoint Save/Restore You can backup your system whenever you need and restore them back to anytime you wish, 1 hour, 1 day or 1 month ago. Restore points are unlimited. (disable item for OEM version)
- 7. **Data Disk Protection** Pro Magic Plus now comes with data disk protection, provides complete protection for your computer! (disable item for OEM version)
- 8. You can choose to change the default path of 'My Document', 'My Favorite' and 'Outlook **Express'**, so that when you are restoring the system, data in these folders will not be restored as well. (This is optional, you can leave it as it is).

DNOTE: Functions of each version will differ from each other, and will be based on the function descriptions of

each version.

System Requirements

First OS must be Windows 98 SE/ME/2000/XP

- Support Only Windows OS (No Linux)
- ♦ Windows server OS and Windows NT not supported
- Minimum of Intel 486 or above, 16MB of memory or above
- ◇ Minimum of 500MB free/usable space or above
- Support for SCSI & SATA Hard disk

Pro Magic Plus only supports SCSI hard disk with Windows 2000 or OS above

Notice Before Installation

- 1. Before install Pro Magic Plus, turn off all anti-virus software. (Include BIOS anti-virus function)
- 2. Pro Magic Plus does not support multiple PRI partitions. If you have multiple PRI partitions, please repartition your HD before installation.
- 3. If your HDD is not fully partitioned (with un-partitioned/unused space at end of HDD), please repartition the HDD before install Pro Magic Plus.

APPENDIX

Debug Port Post Code

Normal POST Codes

NOTE: EISA POST codes are typically output to port address 300h.

ISA POST codes are output to port address 80h.

Code(hex)	Name	Description
C0	Turn Off Chipset And CPU test	OEM Specific-Cache control cache Processor Status (1FLAGS) Verification. Tests the following processor status flags: Carry, zero, sign, overflow, The BIOS sets each flag, verifies They are set, then turns each flag off and verifies it is off. Read/Write/Verify all CPU registers except SS, SP, and BP with data pattern FF and 00. RAM must be periodically refreshed to keep the memory from decaying. This function ensures that the memory refresh function is working properly.
C1	Memory Presence	First block memory detect OEM Specific-Test to size on-board memory. Early chip set initialization Memory presence test OEM chip set routines Clear low 64K of memory Test first 64K memory.
C2	Early Memory Initialization	OEM Specific- Board Initialization
C3	Extend Memory DRAM select	OEM Specific- Turn on extended memory Initialization Cyrix CPU initialization Cache initialization
C4	Special Display Handling	OEM Specific- Display/Video Switch Handling so that Switch Handling display switch errors never occurs
C5	Early Shadow	OEM specific- Early shadow enable for fast boot
C6	Cache presence test	External cache size detection
CF	CMOS Check	CMOS checkup
B0	Spurious	If interrupt occurs in protected mode.
B1	Unclaimed NMI	If unmasked NMI occurs, display Press F1 to disable NMI, F2 reboot.
BF	Program Chip Set	To program chipset from defaults values
E1-EF	Setup Pages	E1- Page 1, E2 - Page 2, etc.
1	Force load Default to chipset	Chipset defaults program
2	Reserved	
3	Early Superio Init	Early Initialized the super IO

Code(hex)	Name	Description
4	Reserved	•
5	Blank video	Reset Video controller
6	Reserved	
7	Init KBC	Keyboard controller init
8	KB test	Test the Keyboard
9	Reserved	Test the heystard
<u> </u>	Mouse Init	Initialized the mouse
 	Ophoard Audio init	Onboard audio controllor initialize if
В		exist
C	Reserved	
D	Reserved	
E	CheckSum Check	Check the intergraty of the ROM,BIOS and message
F	Reserved	
10	Auto detec EEPROM	Check Flash type and copy flash write/erase routines to 0F000h segments
11	Reserved	
12	Cmos Check	Check Cmos Circuitry and reset CMOS
13	Reserved	
14	Chipset Default load	Program the chipset registers with CMOS values
15	Reserved	
16	Clock Init	Init onboard clock generator
17	Reserved	
18	Identify the CPU	Check the CPU ID and init L1/L2 cache
19	Reserved	
<u>1</u> A	Reserved	
1R	Setup Interrupt	Initialize first 120 interrunt
12	Vector Table	vectors with SPURIOUS_INT_HDLR and initialize
10	Decembed	INI UUII-IFII according to INI IBL
10	Reserved	Diwat stop initialize if simple (DI
1D	Early PM INIC	onboard
1E	Reserved	
1F	Re-initial KB	Re-init KB
20	Reserved	
21	HPM init	If support HPM, HPM get initialized here
22	Reserved	
23	Test CMOS	Verifies CMOS is working correctly,
	Interface and	detects bad battery. If failed, load
	Battery Status	CMOS defaults and load into chipset
24	Reserved	
25	Reserved	
26	Reserved	
27	KBC final Init	Final Initial KBC and setup BIOS data area
28	Reserved	
29	Initialize Video Interface	Read CMOS location 14h to find out type of video in use. Detect and Initialize Video Adapter.
2A	Reserved	
2B	Reserved	
2C	Reserved	
2D	Video memory test	Test video memory, write sign-on message to screen.
2E	Reserved	Setup shadow RAM - Enable shadow according to Setup.

Quick POST Codes

Code(hex)	Name	Description
65	Init onboard	Early Initialized the super IO
	device	Reset Video controller
		Keyboard controller init
		Test the Keyboard Initialized the
		mouse Onboard audio controller
		initialize if exist. Check the
		intergraty of the ROM, BIOS and
		message Check Flash type and copy
		flash write/erase routines to 0F000h
		segments Check Cmos Circuitry and
		reset CMOS Program the chipset
		registers with CMOS values
		Init onboard clock generator

Code(hex)	Name	Description
66	Early System setup	Check the CPU ID and init L1/L2 cache
		Initialize first 120 interrupt
		vectors with SPURIOUS_INT_HDLR and
		initialize INT 00h-1Fh according to
		INT_TBL First step initialize if single
		CPU onboard. Re-init KB
		If support HPM, HPM get initialized
67	KBC and CMOS Init	Nerifica CMOS is working sorrostly
67	RBC and CMOS INIC	detects had battery. If failed load
		CMOS defaults and load into chipset
		Final Initial KBC and setup BIOS data
		area.
68	Video Init	Read CMOS location 14h to find out
		type of video in use.
		Detect and Initialize Video Adapter.
		Test video memory, write sign-on
		message to screen.
		Setup shadow RAM - Enable shadow
	0050 T 1	according to Setup.
69	8259 Init	Init 8259 Channel I and mask IRQ 9
6A CD	Memory test	Quick Memory Test
6B	init	CPU wonder groating worgion string
		and turn on all negoggary CDU features
		Display PnP logo and PnP early init
		Setup virus protect according to
		Setup. If required, will auto load
		Awdflash.exe in POST
		Initializing onboard superIO

FF	Boot	

S4 POST Codes

Code(hex)	Name	Description
5A	Early Chipset Init	Early Initialized the super IO Reset Video controller Keyboard controller init Test the Keyboard Initilized the mouse
5B	Cmos Check	Check Cmos Circuitry and reset CMOS
5C	Chipset default Prog	Program the chipset registers with CMOS values. Init onboard clock generator
5D	Identify the CPU	Check the CPU ID and init L1/L2 cache
5E	Setup Interrupt Vector Table	Initialize first 120 interrupt vectors with SPURIOUS_INT_HDLR and INT 00h-1Fh according to INT_TBL First step initialize if single CPU Onboard. Re-init KB If support HPM, HPM get initialized Here.
5F	Test CMOS Interface and Battery status	Verifies CMOS is working correctly, detects bad battery. If failed, load CMOS defaults and load into chipset
60	KBC final Init	Final Initial KBC and setup BIOS data area

Code(hex)	Name	Description
61	Initialize Video Interface	Read CMOS location 14h to find out type of video in use. Detect and Initialize Video Adapter.
62	Video memory test	Test video memory, write sign-on message to screen. Setup shadow RAM - Enable shadow according to Setup.
63	Setup PS2 mouse and test DMA	Setup PS2 Mouse and reset KB Test DMA channel 0
64	Test 8259	Test 8259 channel 1 and mask IRQ 9
65	Init Boot Device	Detect if mouse is present, initialize mouse, install interrupt vectors. Special treatment to PS2 Mouse port ACPI sub-system initializing Initialize cache controller.
66	Install Boot Devices	Enter setup check and auto- configuration check up Initialize floppy disk drive controller and any drives. Install FDD and setup BIOS data area Parameters Initialize hard drive controller and any drives. IDE device detection and install
67	Cache Init	Cache init and USB init
68	PM init	PM initialization
69	PM final Init and issue SMI	Final init Before resume
FF	Full on	

BootBlock POST Codes

Code(hex)	Name	Description
1	Base memory test	Clear base memory area (0000:0000
		9000.111111)
5	KB init	Initialized KBC
12	Install interrupt	Install int. vector (0-77), and
	vectors	initialized 00-1fh to their
		proper place
0D	Init Video	Video initializing
41	Init FDD	Scan floppy and media capacity for
		onboard superIO
FF	Boot	Load boot sector
