

Release information:

[ENGLISH]

- 1. Prevent hang at 24h after modify Resource Controlled By Manual in PnP/PCI Configuration.
- 2. Calibrate DDR Voltage back to normal, after Load Optimized Defaults and SAVE & Exit Setup.
- 3. BIOS compile date: 10/20/2004

[中文]

- 1. 防止當 PnP/PCI Configuration 中的Resource Controlled 設為 Manual 時會當在 24h 的問題.
- 2. 校正 DDR 電壓,在 Load Optimized Defaults 及 SAVE & Exit Setup之後.
- 3. BIOS 日期: 10/20/2004

\*\*\*\*\* NOTE \*\*\*\*\*

1. How to upgrade BIOS:

- a. Boot into MS-DOS or "Safe mode and command prompt" if you are using Windows95/98
- b. Run "kv7v13.exe" to extract all files.
- c. Run "runme.bat"

\*\*\* Please notice that we suggest you flashing the bios with switches

"/py /sn /cd /cp /cc /cks /R" or by "runme.bat".

d. For more detail, please visit:

- <http://fae.abit.com.tw/cht/download/bioshelp.htm> (Chinese)
- <http://fae.abit.com.tw/eng/download/bioshelp.htm> (English)

2.After BIOS updated, pull off the power cord and then clear the CMOS data via jumper before restarting system please.
