

Release information:

[ENGLISH]

1. Added new CPU support.
2. Changed default Suspend\_Mode\_Item to S3 and USB\_Resume\_Item to Enabled for WHQL. Please change USB-PWR Jumper setting from default 1-2 (disabled wake-up) to 2-3 (enabled wake-up).
3. Changed default RTC year to 2005.
4. BIOS compile date: 01/07/2005

[中文]

1. 新增 CPU 支援.
2. 變更 Suspend Mode Item 預設為 S3 及 USB Resume\_Item 預設為 Enabled, 以符合WHQL要求. 並請更改 USB-PWR 跳線設定由預設 1-2 (disabled wake-up) 改至 2-3 (enabled wake-up).
3. 變更預設年份為 2005.
4. BIOS 日期: 01/07/2005

\*\*\*\*\* NOTE \*\*\*\*\*

1. How to upgrade BIOS:

- a. Boot into MS-DOS or "Safe mode and command prompt" if you are using Windows95/98
- b. Run "KV7V14.EXE" to extract all files.
- c. Run "runme.bat"

\*\*\* Please notice that we suggest you flashing the bios with switches

"/py /sn /cd /cp /cc /cks /R" or by "runme.bat".

d. For more detail, please visit:

<http://fae.abit.com.tw/cht/download/bioshelp.htm> (Chinese)  
<http://fae.abit.com.tw/eng/download/bioshelp.htm> (English)

2. After BIOS updated, pull off the power cord and then clear the CMOS data via jumper before restarting system please.
