# **Chapter 2 Hardware Installation Process**

# **Installing the Central Process Unit (CPU)**

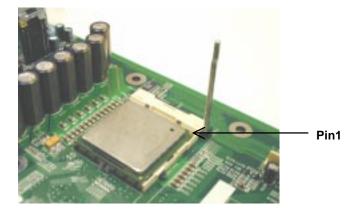

#### **CPU Installation**

- 1. Unlock the CPU socket by pulling the lever up to a 90-degree angle.
- 2. Position the CPU above the socket such that the **marked** corner (pin1) matches the corner near the base of the lever.
- 3. Place the CPU into the socket. If the CPU is unable to insert properly, check its orientation and attempt to re-install.
  - **Warning!** Do not force the CPU into the socket. Doing so will prompt bending of the pins and create damage to the CPU.
- 4. Close the socket by lowering the lever and locking the lever in place.

### Step 1

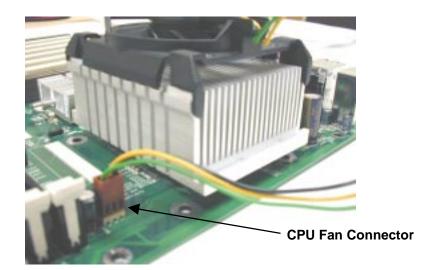

#### Step 2

# Installing the Central Process Unit (CPU) cont.

#### CPU Heat Sink Installation

- 1. Read the related CPU heat sink user's manual for more detailed installation procedures.
- 2. Connect CPU fan power cable into the CPU fan connector on the motherboard.

### **Installing Memory Modules**

- 1. Push the white retaining clips on each of the memory socket outwards.
- 2. Match the notches on the contact edge of the memory module to the ridges in the memory socket.
- 3. Insert the memory module vertically into place. When properly inserted, the white retaining clips will move inward to lock in the module.
- 4. Repeat installation process when adding additional modules.

Double-sided DDR modules can be plugged into either DIMM2 or DIMM3 only. DIMM2 and DIMM3 only can plug single side DDR (DIMM2: single side, DIMM3: single side)
