Other product names used in this manual are the properties of their respective owners and are acknowledged.

Federal Communications Commission (FCC)

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment onto an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Shielded interconnect cables and a shielded AC power cable must be employed with this equipment to ensure compliance with the pertinent RF emission limits governing this device. Changes or modifications not expressly approved by the system's manufacturer could void the user's authority to operate the equipment.

Declaration of Conformity

This device complies with part 15 of the FCC rules. Operation is subject to the following conditions:

- This device may not cause harmful interference, and
- This device must accept any interference received, including interference that may cause undesired operation.

Canadian Department of Communications

This class B digital apparatus meets all requirements of the Canadian Interference-causing Equipment Regulations.

Cet appareil numérique de la classe B respecte toutes les exigences du Règlement sur le matériel brouilleur du Canada.

About the Manual

Chapter 1

Introducing the Mainboard

Introduction

Congratulations on purchasing this mainboard. This mainboard has a Socket-478 processor socket for Intel Pentium 4 type of processors supporting front side bus (FSB) speeds up to 533 MHz.

This mainboard integrates the **SiS650/650GL/651** Northbridge along with **SiS961/962/962L** Southbridge chipsets that supports built-in AC97 Codec, 2 DDR + 2 SDR modules up to 2GB system memory, and provide Ultra DMA 33/66/100 function. This mainboard integrates a 256-bit 3D/2D Graphics Engine, Video Accelerator and Advanced Hardware Acceleration MPEGI/MPEGII Video Decoder for the Intel Pentium 4 series based PC systems. It has the external AGP slot with AGP 4X 266MHz capability, one AMR (Audio Modem Riser) slot to support Audio and Modem application, and built-in 10BaseT/100BaseTX Network Interface. In addition, this mainboard has a full set of I/O ports including two PS/2 ports for mouse and keyboard, two serial ports, one parallel port, one MIDI/game port and four USB ports --two back-panel ports, onboard USB header JUSB1 providing two extra ports (which support USB 2.0 if SiS962L Southbridge is integrated on the mainboard).

This mainboard is Micro ATX size and has power connectors for an ATX power supply and measures 244 x 244mm.

Checklist

Compare the mainboard' s package contents with the following checklist:

Standard Items

- One mainboard
- One diskette drive ribbon cable
- One IDE drive ribbon cable
- Software support CD
- This User' s Manual

Features

| Processor | <ul style="list-style-type: none"> • The mPGA Socket 478 • Supports Intel Pentium 4 series CPUs • Supports up to 533 MHz system bus | | | | | | | | | | | | | | | |

| Onboard I/O Ports | <ul style="list-style-type: none"> Two PS/2 ports for mouse and keyboard Two serial ports One parallel port One MIDI/game port Four USB ports (two backpanel ports, onboard USB header providing two extra ports) Audio jacks for microphone, line-in and line-out |
| Hardware Monitoring | Built-in hardware monitoring for CPU & System temperatures, fan speeds and mainboard voltages. |
| Onboard Flash ROM | Supports Plug and Play configuration of peripheral devices and expansion cards |

Choosing a Computer Case

There are many types of computer cases on the market. The mainboard complies with the specifications for the micro-ATX system case. Some features on the mainboard are implemented by cabling connectors on the mainboard to indicators and switches on the system case. Ensure that your case supports all the features required. The mainboard can support one floppy diskette drive and four enhanced IDE drives. Ensure that your case has sufficient power and space for all the drives that you intend to install.

Most cases have a choice of I/O templates in the rear panel. Make sure that the I/O template in the case matches the I/O ports installed on the rear edge of the mainboard.

This mainboard has a micro-ATX form factor of 244 x 244 mm. Choose a case that accommodates this form factor.

This concludes Chapter 1. The next chapter explains how to install the mainboard.

Mainboard Components

Chapter 2

Installing the Mainboard

Safety Precautions

Follow these safety precautions when installing the mainboard:

- Wear a grounding strap attached to a grounded device to avoid damage from static electricity.
- Discharge static electricity by touching the metal case of a safely grounded object before working on the mainboard.
- Leave components in the static-proof bags they came in.
- Hold all circuit boards by the edges. Do not bend circuit boards.

Quick Guide

This Quick Guide suggests the steps you can take to assemble your system with the mainboards.

The following table provides a reference for installing specific components:

| | |
|--|---------------|
| Locating Mainboard Components | Go to page 5 |
| Installing the Mainboard in a Case | Go to page 7 |
| Setting Jumpers | Go to page 7 |
| Installing Case Components | Go to page 9 |
| Installing the CPU | Go to page 11 |
| Installing Memory | Go to page 14 |
| Installing an HDD and CD-ROM Drive | Go to page 15 |
| Installing an FDD | Go to page 17 |
| Installing Add-on Cards | Go to page 18 |
| Connecting Options | Go to page 20 |
| Connecting Peripheral (I/O) Devices | Go to page 22 |

Installing the Mainboard in a Case

Refer to the following illustration and instructions for installing the mainboard in a case:

This illustration shows an example of a mainboard being installed in a tower-type case:

Note: Do not overtighten the screws as this can stress the mainboard.

Most system cases have mounting brackets installed in the case, which correspond to the holes in the mainboard. Place the mainboard over the mounting brackets and secure the mainboard onto the mounting brackets with screws.

2. Secure the mainboard with screws where appropriate.

Ensure that your case has an I/O template that supports the I/O ports and expansion slots on your mainboard.

Checking Jumper Settings

This section explains how to set jumpers for correct configuration of the mainboard.

Setting Jumpers

Use the mainboard jumpers to set system configuration options. Jumpers with more than one pin are numbered. When setting the jumpers, ensure that the jumper caps are placed on the correct pins.

The illustrations below show a 2-pin jumper. When the jumper cap is placed on both pins, the jumper is SHORT. If you remove the jumper cap, or place the jumper cap on just one pin, the jumper is OPEN. This illustration shows a 3-pin jumper. Pins 1 and 2 are SHORT.

Short

Open

Checking Jumper Settings

The following illustration shows the location of the mainboard jumpers. Pin 1 is labeled.

Jumper Settings

| Jumper | Type | Description | Setting (default) |
|--------|-------|-------------------|--------------------------------|
| JP3 | 3-pin | Clear CMOS jumper | 1-2: Clear CMOS 2-3: Normal |

JP3

JP3: Clear CMOS Jumper

Use this jumper to clear the contents of the CMOS memory. You may need to clear the CMOS memory if the settings in the Setup Utility are incorrect and prevent your mainboard from operating. To clear the CMOS memory, disconnect all the power cables from the mainboard and then move the jumper cap into the CLEAR setting for a few seconds.

Connecting Case Components

After you have installed the mainboard into a case, you can begin connecting the mainboard components. Refer to the following:

| | |
|--|---|
| <ol style="list-style-type: none"> 1. Connect the power connector from the power supply to the ATX_PW1 connector on the mainboard. 2. Connect the CPU cooling fan cable to JP1. 3. If there is a cooling fan installed in the system chassis, connect the cable from the cooling fan to the JP2 fan power connector on the mainboard. 4. Connect the case switches and indicator LEDs to the SW1 header. |  |
| <ol style="list-style-type: none"> 5. Connect the case speaker cable to SPK1. | |

ATX_PW1: ATX 20-pin Power Connector

| Pin | Signal Name | Pin | Signal Name |
|-----|-------------|-----|-------------|
| 1 | +3.3V | 11 | +3.3V |
| 2 | +3.3V | 12 | -12V |
| 3 | Ground | 13 | Ground |
| 4 | +5V | 14 | PS ON# |
| 5 | Ground | 15 | Ground |
| 6 | +5V | 16 | Ground |
| 7 | Ground | 17 | Ground |
| 8 | PWRGD | 18 | +5V |
| 9 | +5VSB | 19 | +5V |
| 10 | +12V | 20 | +5V |

JP1/JP2: FAN Power Connectors

| Pin | Signal Name | Function |
|-----|-------------|---------------|
| 1 | GND | System Ground |
| 2 | +12V | Power +12V |
| 3 | Sense | Sensor |

SPK1: Internal speaker

| Pin | Signal Name |
|-----|-------------|
| 1 | SPKR |
| 2 | NC |
| 3 | Ground |
| 4 | +5V |

The SW1 Connector

This panel connector provides a set of switch and LED connectors found on ATX case. Refer to the table below for information.

| Device | Pins |
|-------------|------|
| HDDLED_P | 1 |
| FP ACPI LED | 2, 4 |
| HDDLED_N | 3 |
| RST_SW_N | 5 |
| PW_BT_P | 6 |
| RST_SW_P | 7 |
| PW_BT_N | 8 |
| RSVD_DNU | 9 |
| KEY | 10 |

Note: The plus sign (+) indicates a pin which must be connected to a positive voltage.

Installing Hardware

Installing the Processor

Caution: When installing a CPU heatsink and cooling fan make sure that you DO NOT scratch the mainboard or any of the surface-mount resistors with the clip of the cooling fan. If the clip of the cooling fan scrapes across the mainboard, you may cause serious damage to the mainboard or its components.

On most mainboards, there are small surface-mount resistors near the processor socket, which may be damaged if the cooling fan is carelessly installed.

Avoid using cooling fans with sharp edges on the fan casing and the clips. Also, install the cooling fan in a well-lit work area so that you can clearly see the mainboard and processor socket.

Before installing the Processor

This mainboard automatically determines the CPU clock frequency and system bus frequency for the processor. You may be able to change these settings by making changes to jumpers on the mainboard, or changing the settings in the system Setup Utility. We strongly recommend that you do not overclock processors or other components to run faster than their rated speed.

Warning: Overclocking components can adversely affect the reliability of the system and introduce errors into your system. Overclocking can permanently damage the mainboard by generating excess heat in components that are run beyond the rated limits.

This mainboard has a Socket 478 processor socket. When choosing a processor, consider the performance requirements of the system. Performance is based on the processor design, the clock speed and system bus frequency of the processor, and the quantity of internal cache memory and external cache memory.

The following processor is currently supported by this mainboard.

Intel P4 478: 1.4GHz ~ 2.2GHz, FSB: 400/533MHz

CPU Installation Procedure

The following illustration shows CPU installation components:

Note: The pin-1 corner is marked with an arrow ▼

Follow these instructions to install the Retention Module and CPU:

1. Remove the existing retention module (if applicable).
2. Position the backplate against the underside of the mainboard, secure the 4 screws firmly on the retention module.

Note: Do not over tighten the screws.

3. Install your CPU. Pull up the lever away from the socket and lift up to 90-degree angle.

4. Locate the CPU cut edge (the corner with the pinhole noticeably missing). Align and insert the CPU correctly.

5. Press the lever down.

6. Apply thermal grease on top of the CPU.

7. Put the CPU Fan down on the retention module and snap the four retention legs of the cooling fan into place.

8. Flip the levers over to lock the heat sink in place.

9. Connect the CPU Cooling Fan power cable to the CPUFAN1 connector. This completes the installation.

Note: CPU fan and heatsink installation procedures may vary with the type of CPU fan/heatsink supplied. The form and size of fan/heatsink may also vary.

Installing Memory Modules

This mainboard accommodates 168-pin 3.3V/184-pin 2.5V unbuffered SDRAM memory modules. The memory chips must be standard or registered SDRAM (Synchronous Dynamic Random Access Memory).

It can support SDRAM up to 133MHz/DDR up to 333MHz (for SiS651 NB) memory bus.

SDRAM provides 800 MB/s or 1 GB/s data transfer rate corresponding with the bus 100 MHz or 133 MHz. It doubles the rate to 1.6 GB/s and 2.1 GB/s by transferring data on both the rising and falling edges of the clock. DDR SDRAM uses additional power and ground lines and requires 184-pin 2.5V unbuffered DIMM module rather than the 168-pin 3.3V unbuffered DIMMs used by SDRAM.

Installation Procedure

You must install at least one memory module (SDRAM or DDR SDRAM) in order to use the mainboard.

Note: You cannot use DDR SDRAM and SDRAM simultaneously.

Refer to the following to install the memory modules.

1. Push the latches on each side of the DIMM slot down.
2. Align the memory module with the slot. The DIMM slots are keyed with notches and the DIMMs are keyed with cutouts so that they can only be installed correctly.
3. Check that the cutouts on the DIMM module edge connector match the notches in the DIMM slot:

4. Install the DIMM module into the slot and press it firmly down until it seats correctly. The slot latches are levered upwards and latch on to the edges of the DIMM.
5. Install any remaining DIMM modules.

Installing a Hard Disk Drive/CD-ROM

This section describes how to install IDE devices such as a hard disk drive and a CD-ROM drive.

About IDE Devices

Your mainboard has a primary and secondary IDE channel interface (IDE1 and IDE2). An IDE ribbon cable supporting two IDE devices is bundled with the mainboard.

If you want to install more than two IDE devices, get a second IDE cable and you can add two more devices to the secondary IDE channel.

IDE devices have jumpers or switches that are used to set the IDE device as MASTER or SLAVE. Refer to the IDE device user's manual. When installing two IDE devices on one cable, ensure that one device is set to MASTER and the other device is set to SLAVE. The documentation of your IDE device explains how to do this.

About UltraDMA

This mainboard supports UltraDMA 66/100/(133). UDMA is a technology that accelerates the performance of devices in the IDE channel. To maximize performance, install IDE devices that support UDMA and use 80-pin IDE cables that support UDMA 66/100/(133).

Installing a Hard Disk Drive

| | |
|--|--|
| <ol style="list-style-type: none"> 1. Install the hard disk drive into the drive cage in your system case. 2. Plug the IDE cable into IDE1 (A): Note: Ribbon cable connectors are usually keyed so that they can only be installed correctly on the device connector. If the connector is not keyed, make sure that you match the pin-1 side of the cable connector with the pin-1 side of the device connector. Each connector has the pin-1 side clearly marked. The pin-1 side of each ribbon cable is always marked with a colored stripe on the cable. |  |
| <ol style="list-style-type: none"> 3. Plug an IDE cable connector into the hard disk drive IDE connector (B). It doesn't matter which connector on the cable you use. | |
| <ol style="list-style-type: none"> 4. Plug a power cable from the case power supply into the power connector on the hard disk drive (C). | |

When you first start up your system, the BIOS should automatically detect your hard disk drive. If it doesn't, enter the Setup Utility and use the IDE Hard Disk Auto Detect feature to configure the hard disk drive that you have installed.

Installing a CD-ROM/DVD Drive

| | |
|---|--|
| <p>1. Install the CD-ROM/DVD drive into the drive cage in your system case.</p> <p>2. Plug the IDE cable into IDE1 (A). If you have already installed an HDD, use the other connector on the IDE cable.</p> <p>Note: Ribbon cable connectors are usually keyed so that they can only be installed correctly on the device connector. If the connector is not keyed, make sure that you match the pin-1 side of the cable connector with the pin-1 side of the device connector. Each connector has the pin-1 side clearly marked. The pin-1 side of each ribbon cable is always marked with a colored stripe on the cable.</p> |  |
| <p>3. Plug an IDE cable connector into the CD-ROM/DVD drive IDE connector (B). It doesn't matter which connector on the cable you use.</p> | |
| <p>4. Plug a power cable from the case power supply into the power connector on the CD-ROM/DVD drive (C).</p> | |
| <p>5. Use the audio cable provided with the CD-ROM/DVD drive to connect to the mainboard CD-in connector CDIN1 or CDIN2 (D).</p> | |

When you first start up your system, the BIOS should automatically detect your CD-ROM/DVD drive. If it doesn't, enter the Setup Utility and configure the CD-ROM/DVD drive that you have installed.

Installing a Floppy Diskette Drive

The mainboard has a floppy diskette drive (FLOPPY) interface and ships with a diskette drive ribbon cable that supports one or two floppy diskette drives. You can install a 5.25-inch drive and a 3.5-inch drive with various capacities. The floppy diskette drive cable has one type of connector for a 5.25-inch drive and another type of connector for a 3.5-inch drive.

| | |
|---|--|
| <p>1. Install the FDD into the drive cage in your system case.</p> <p>2. Plug the FDD cable into FLOPPY1 (A):</p> <p>Note: Ribbon cable connectors are usually keyed so that they can only be installed correctly on the device connector. If the connector is not keyed, make sure that you match the pin-1 side of the cable connector with the pin-1 side of the device connector. Each connector has the pin-1 side clearly marked. The pin-1 side of each ribbon cable is always marked with a colored stripe on the cable.</p> |  |
| <p>3. Plug the correct connector on the FDD cable for the 5.25-inch or 3.5-inch drive into the FDD connector (B).</p> | |
| <p>4. Plug a power cable from the case power supply into the power connector on the FDD (C).</p> | |

When you first start up your system, go immediately to the Setup Utility to configure the floppy diskette drives that you have installed.

Installing Add-on Cards

This mainboard has two 32-bit PCI (Peripheral Components Interconnect) expansion slots, one 4xAGP slot, and one AMR (Audio Modem Riser) slot.

AGP Slot The 4xAGP slot is used to install a graphics adapter that supports the 4xAGP specification and has a 4xAGP edge connector.

Note: The above layout is for reference only. The AGP slot may be different from your mainboard. Please refer to actual shipment.

PCI Slots PCI slots are used to install expansion cards that have the 32-bit PCI interface.

AMR Slot The AMR (Audio Modem Riser) slot is an industry standard slot that allows for the installation of a special audio/modem riser card. Different territories have different regulations regarding the specifications of a modem card. You can purchase an AMR card that is approved in your area and install it directly into the AMR slot.

Note: Before installing an add-on card, check the documentation for the card carefully. If the card is not Plug and Play, you may have to manually configure the card before installation.

Follow these instructions to install an add-on card:

| | |
|---|---|
| 1. Remove a blanking plate from the system case corresponding to the slot you are going to use. | |
| 2. Install the edge connector of the add-on card into the expansion slot. Ensure that the edge connector is correctly seated in the slot. |  An isometric diagram of a computer motherboard showing an expansion slot. An add-on card is being inserted into the slot. A label 'Edge connector' points to the bottom edge of the card, and another label 'Add-on card' points to the card itself. The diagram shows the card's metal bracket and how it fits into the slot's opening. |
| 3. Secure the metal bracket of the card to the system case with a screw. | |

Note: For some add-on cards, for example graphics adapters and network adapters, you have to install drivers and software before you can begin using the add-on card.

Connecting Optional Devices

Refer to the following for information on connecting the mainboard's optional devices:

AUDIO1: Front Panel Audio header

This header allows the user to install auxiliary front-oriented microphone and line-out ports for easier access.

| Pin | Signal Name | Function |
|-----|-------------|---|
| 1 | AUD_MIC | Front Panel Microphone input signal |
| 2 | AUD_GND | Ground used by Analog Audio Circuits |
| 3 | AUD_MIC | Microphone Power |
| 4 | AUD_VCC | Filtered +5 V used by Analog Audio Circuits |
| 5 | AUD_FPOUT_R | Right Channel Audio signal to Front Panel |
| 6 | AUD_RET_R | Right Channel Audio signal to Return from Front Panel |
| 7 | NC | Reserved for future use to control Head-phone Amplifier |
| 8 | KEY | No Pin |
| 9 | AUD_FPOUT_L | Left Channel Audio signal to Front Panel |
| 10 | AUD_RET_L | Left Channel Audio signal Return from Front Panel |

JUSB1: Extended USB module

The mainboard has USB ports installed on the rear edge I/O port array. Some computer cases have a special module that mounts USB ports at the front of the case. If you have this kind of case, use auxiliary USB connectors JUSB1 to connect the front-mounted ports to the mainboard.

| Pin | Signal Name | Pin | Signal Name |
|-----|-------------|-----|-------------|
| 1 | VCC | 2 | VCC |
| 3 | DATA1- | 4 | DATA2- |
| 5 | DATA1+ | 6 | DATA2+ |
| 7 | GROUND | 8 | GROUND |
| 9 | KEY | 10 | NC |

Note: Please make sure that the USB cable has the same pin assignment as indicated above. A different pin assignment may cause damage or system hang-up.

IR1: Serial infrared port

The mainboard supports an Infrared (IR1) data port. Infrared ports allow the wireless exchange of information between your computer and similarly equipped devices such as printers, laptops, Personal Digital Assistants (PDAs), and other computers.

| Pin | Signal Name | Function |
|-----|-------------|--------------------|
| 1 | FIR | Fast InfraRed |
| 2 | KEY | No pin |
| 3 | +5V | IR Power |
| 4 | GND | Ground |
| 5 | IRTX | IrDA serial output |
| 6 | IRRX | IrDA serial input |

Connecting I/O Devices

The backplane of the mainboard has the following I/O ports:

| | |
|----------------------------|--|
| PS/2 Mouse | Use the upper PS/2 port to connect a PS/2 pointing device. |
| PS/2 Keyboard | Use the lower PS/2 port to connect a PS/2 keyboard. |
| LAN Port (optional) | Use the LAN port to connect to the network. |
| USB Ports | Use the USB ports to connect USB devices. |
| LPT1 | Use LPT1 to connect printers or other parallel communications devices. |
| COM1 | Use the COM ports to connect serial devices such as mice or fax/modems. COM1 is identified by the system as COM1/3 |
| VGA Port | Use the VGA port to connect an external monitor. |
| Game Port | Use the game port to connect a joystick or a MIDI device. |
| Audio Ports | Use the three audio ports to connect audio devices. The left side jack is for a stereo line-out signal. The middle jack is for a stereo line-in signal. The right side jack is for a microphone. |

External Connector Color Coding

Many connectors now use standard colors as shown in the table below.

| Connector | Color |
|---------------------------------|-------------------|
| Audio line-in | Light blue |
| Audio line-out | Lime |
| Digital monitor/flat panel | White |
| IEEE 1394 | Grey |
| Microphone | Pink |
| MIDI/game | Gold |
| Parallel | Burgundy |
| PS/2-compatible keyboard | Purple |
| PS/2-compatible mouse | Green |
| Serial | Teal or Turquoise |
| Speaker out/subwoofer | Orange |
| Right-to-left speaker | Brown |
| USB | Black |
| Video out | Yellow |
| SCSI, network, telephone, modem | None |

This concludes Chapter 2. The next chapter covers the BIOS.

Chapter 3

Using BIOS

About the Setup Utility

The computer uses the latest AMI BIOS with support for Windows Plug and Play. The CMOS chip on the mainboard contains the ROM setup instructions for configuring the mainboard BIOS.

The BIOS (Basic Input and Output System) Setup Utility displays the system's configuration status and provides you with options to set system parameters. The parameters are stored in battery-backed-up CMOS RAM that saves this information when the power is turned off. When the system is turned back on, the system is configured with the values you stored in CMOS.

The BIOS Setup Utility enables you to configure:

- Hard drives, diskette drives, and peripherals
- Video display type and display options
- Password protection from unauthorized use
- Power management features

The settings made in the Setup Utility affect how the computer performs. Before using the Setup Utility, ensure that you understand the Setup Utility options.

This chapter provides explanations for Setup Utility options.

The Standard Configuration

A standard configuration has already been set in the Setup Utility. However, we recommend that you read this chapter in case you need to make any changes in the future.

This Setup Utility should be used:

- when changing the system configuration
- when a configuration error is detected and you are prompted to make changes to the Setup Utility
- when trying to resolve IRQ conflicts
- when making changes to the Power Management configuration
- when changing the password or making other changes to the Security Setup

Using BIOS

When you start the Setup Utility, the main menu appears. The main menu of the Setup Utility displays a list of the options that are available. A highlight indicates which option is currently selected. Use the cursor arrow keys to move the highlight to other options. When an option is highlighted, execute the option by pressing <Enter>.

Some options lead to pop-up dialog boxes that prompt you to verify that you wish to execute that option. Other options lead to dialog boxes that prompt you for information.

Some options (marked with a triangle ▶) lead to submenus that enable you to change the values for the option. Use the cursor arrow keys to scroll through the items in the submenu.

In this manual, default values are enclosed in parenthesis. Submenu items are denoted by a triangle ▶.

Standard CMOS Setup Page

Use this page to set basic information such as the date, the time, the IDE devices, and the diskette drives. If you press the F3 key, the system will automatically detect and configure the hard disks on the IDE channels.

| AMIBIOS SETUP – STANDARD CMOS SETUP | | | | | | | | | |

Date & Time

Use these items to set the system date and time.

Pri Master/Pri Slave/Sec Master/Sec Slave

Use these items to configure devices connected to the Primary and Secondary IDE channels. To configure an IDE hard disk drive, choose *Auto*. If the *Auto* setting fails to find a hard disk drive, set it to *User*, and then fill in the hard disk characteristics (Size, Cyls, etc.) manually. If you have a CD-ROM

drive, select the setting *CDROM*. If you have an ATAPI device with removable media (e.g. a ZIP drive or an LS-120) select *Floptical*.

Floppy Drive A/Floppy Drive B

Use these items to set the size and capacity of the floppy diskette drive(s) installed in the system.

Advanced Setup

Use this page to set more advanced information about your system. Take some care with this page. Making changes can affect the operation of your computer.

| AMIBIOS SETUP – ADVANCED SETUP (C) 2000 American Megatrends, Inc. All Rights Reserved | | |
|--|----------|-------------------------------------|
| Quick Boot | Enabled | |
| 1 st Boot Device | IDE-0 | |
| 2 nd Boot Device | Floppy | |
| 3 rd Boot Device | CDROM | |
| Try Other Boot Devices | Yes | |
| S.M.A.R.T. for Hard Disks | Disabled | |
| BootUp Num-Lock | On | |
| Floppy Drive Swap | Disabled | |
| Floppy Drive Seek | Disabled | |
| Password Check | Setup | |
| Boot To OS/2 > 64MB | No | |
| L2 Cache | Enabled | |
| System BIOS Cacheable | Disabled | ESC : Quit - → ® : Select Item |
| Share Memory Size | 32 MB | F1 : Help PU/PD/+/- : Modify |
| Graphic Win Size | 4 MB | F5 : Old Values (Shift) F2 : Color |
| DRAM CAS# Latency | 3T | F6 : Load BIOS Defaults |
| Timing Setting Mode | Normal | F7 : Load Setup Defaults |
| MA 1T/2T Select | MA 2T | |
| Advanced Read Prefetch | Enabled | |

Quick Boot (Enabled)

If you enable this item, the system starts up more quickly by elimination of some of the power on test routines.

1st Boot Device/2nd Boot Device/3rd Boot Device (IDE-0/Floppy/CDROM)

Use these items to determine the device order the computer uses to look for an operating system to load at start-up time.

Try Other Boot Device (Yes)

If you enable this item, the system will also search for other boot devices if it fails to find an operating system from the first two locations.

S.M.A.R.T. for Hard Disks (Disabled)

Enable this item if any IDE hard disks support the S.M.A.R.T. (Self-Monitoring, Analysis and Reporting Technology) feature.

BootUp Num-Lock (On)

This item determines if the Num Lock key is active or inactive at system start-up time.

Floppy Drive Swap (Disabled)

If you have two diskette drives installed and you enable this item, drive A becomes drive B and drive B becomes drive A.

Floppy Drive Seek (Disabled)

If you enable this item, your system will check all floppy disk drives at start up. Disable this item unless you are using an old 360KB drive.

Password Check (Setup)

If you have entered a password for the system, use this item to determine, if the password is required to enter the Setup Utility (*Setup*) or required both at start-up and to enter the Setup Utility (*Always*).

Boot to OS/2 > 64MB (No)

Enable this item if you are booting the OS/2 operating system and you have more than 64MB of system memory installed.

L2 Cache (Enabled)

Leave these items enabled since all the processors that can be installed on this board have internal L2 cache memory.

System BIOS Cacheable (Disabled)

If you enable this item, a segment of the system BIOS will be copied to main memory for faster execution.

Share Memory Size (32 MB)

This item lets you allocate a portion of the main memory for the onboard VGA display application with five options of 4 / 8 / 16 / 32 / 64 MB.

Graphic Win Size (4 MB)

This item defines the size of aperture if you use a graphic adapter.

DRAM CAS# Latency (3T)

This item determines the operation of DRAM memory CAS (column address strobe). It is recommended that you leave this item at the default value. The 3T setting requires faster memory that specifically supports this mode.

Timing Setting Mode (Normal)

This item determines the timing setting mode of the memory. We recommend you leave this item at the default value.

MA 1T/2T Select (MA 2T)

This item adjusts timing 1T/2T latency. We recommend you to leave this item at the default value.

Advanced Read Prefetch (Enabled)

This item enables prefetching for reading data. We recommend you to leave this item at the default value.

Auto Detect DIMM/PCI Clk (Disabled)

When this item is enabled, BIOS will disable the clock signal of free DIMM/PCI

slots.

Spread Spectrum (Disabled)

If you enable spread spectrum, it can significantly reduce the EMI (Electro-Magnetic Interference) generated by the system.

DOS Flat Mode (Disabled)

This item enables BIOS entering the DOS protected mode without other software supporting under the DOS operating system. We recommend you to leave this item at the default value.

Power Management Setup

This page sets some of the parameters for system power management operation.

| AMIBIOS SETUP – POWER MANAGEMENT SETUP (C) 2000 American Megatrends, Inc. All Rights Reserved | | |
|--|----------|-------------------------------------|
| ACPI Aware O/S | Yes | |
| Power Management | Enabled | |
| Suspend Time out | Disabled | |
| Hard Disk Time out | Disabled | |
| Resume On RTC Alarm | Disabled | |
| RTC Alarm Date | 15 | ESC : Quit - F10 : Select Item |
| RTC Alarm Hour | 12 | F1 : Help PU/PD/+/- : Modify |
| RTC Alarm Minute | 30 | F5 : Old Values (Shift)F2 : Color |
| RTC Alarm Second | 30 | F6 : Load Optimal values |
| LAN/Ring Power On | Disabled | F7 : Load Best performance values |
| Keyboard Power On | Disabled | |

ACPI Aware O/S (Yes)

Enable this item if you are using an O/S that supports ACPI function such as Windows 98/ME /2000.

Power Management (Enabled)

Use this item to select a power management scheme. Both APM and ACPI are supported.

Suspend Time Out (Disabled)

This sets the timeout for Suspend mode in minutes. If the time selected passes without any system activity, the computer will enter power-saving Suspend mode.

Hard Disk Time Out (Disabled)

This sets the timeout to power down the hard disk drive, if the time selected passes without any hard disk activity.

Resume On RTC Alarm Date / Hour / Minute / Second (15/12/30/30)

The system can be turned off with a software command. If you enable this item, the system can automatically resume at a fixed time based on the system's RTC (realtime clock). Use the items below this one to set the date and time of the wake-up alarm. You must use an ATX power supply in order to use

this feature.

LAN/Ring Power On (Disabled)

The system can be turned off with a software command. If you enable this item, the system can automatically resume if there is an incoming call on the Modem. You must use an ATX power supply in order to use this feature.

KeyBoard Power On (Disabled)

If you enable this item, you can turn the system on and off by pressing hot keys on the keyboard. You must enable the Keyboard Power On jumper and use an ATX power supply in order to use this feature.

PCI / Plug and Play Setup

This page sets some of the parameters for devices installed on the PCI bus and devices that use the system plug and play capability.

| AMIBIOS SETUP – PCI / PLUG AND PLAY SETUP (C) 2000 American Megatrends, Inc. All Rights Reserved | |
|---|----------|
| Plug and Play Aware O/S | Yes |
| Primary Graphics Adapter | PCI |
| Allocate IRQ for PCI VGA | Yes |
| PCI IDE BusMaster | Disabled |
| ESC : Quit - ↑ ↓ ® : Select Item | |
| F1 : Help PU/PD/+/- : Modify | |
| F5 : Old Values (Shift)F2 : Color | |
| F6 : Load BIOS Defaults | |
| F7 : Load Setup Defaults | |

Plug and Play Aware O/S (Yes)

Enable this item if you are using an O/S that supports Plug and Play such as Windows 95/98/ME.

Primary Graphics Adapter (PCI)

This item indicates if the primary graphics adapter uses the PCI or the AGP bus. The default PCI setting still lets the onboard display work and allows the use of a second display card installed in a PCI slot.

Allocate IRQ to PCI VGA (Yes)

If this item is enabled, an IRQ will be assigned to the PCI VGA graphics system. You set this value to No to free up an IRQ.

PCI IDE BusMaster (Disabled)

This item enables or disables the DMA under DOS mode. We recommend you to leave this item at the default value.

Load Optimal Settings

If you select this item and press **Enter** a dialog box appears. If you press **Y**, and then **Enter**, the Setup Utility loads a set of fail-safe default values. These default values are not very demanding and they should allow your system to function with most kinds of hardware and memory chips.

Note: It is highly recommended that users enter this option to load optimal values for accessing the best performance.

Load Best Performance Settings

If you select this item and press **Enter** a dialog box appears. If you press **Y**, and then **Enter**, the Setup Utility loads a set of best-performance default values. These default values are quite demanding and your system might not function properly if you are using slower memory chips or other low-performance components.

Features Setup

This page sets some of the parameters for peripheral devices connected to the system.

| AMIBIOS SETUP – FEATURES SETUP (C) 2000 American Megatrends, Inc. All Rights Reserved | | |
|--|-----------|------------------------------------|
| OnBoard FDC | Enabled | |
| OnBoard Serial Port | 3F8h/COM1 | |
| OnBoard IR Port | Disabled | |
| OnBoard Parallel Port | 378h | |
| Parallel Port Mode | ECP | |
| Parallel Port IRQ | 7 | |
| Parallel Port DMA | 3 | |
| OnBoard Game Port | 201h | ESC : Quit - F10 : Select Item |
| OnBoard MIDI Port | 300h | F1 : Help PU/PD/+/- : Modify |
| MIDI Port IRQ | 10 | F5 : Old Values (Shift) F2 : Color |
| OnBoard PCI IDE | Both | F6 : Load BIOS Defaults |
| Audio Device | Enabled | F7 : Load Setup Defaults |
| Modem Device | Enabled | |
| Ethernet Device | Enabled | |
| Onboard USB Function | Enabled | |
| USB Function for DOS | Disabled | |
| ThumbDrive for DOS | Disabled | |

OnBoard FDC (Enabled)

Use this item to enable or disable the onboard floppy disk drive interface.

OnBoard Serial Port (3F8h/COM1)

Use these items to enable or disable the onboard COM1 serial port, and to assign a port address.

OnBoard IR Port (Disabled)

Use this item to enable or disable the onboard infrared port, and to assign a port address.

Onboard Parallel Port (378h)

Use this item to enable or disable the onboard LPT1 parallel port, and to assign a port address. The Auto setting will detect and available address.

Parallel Port Mode (ECP)

Use this item to set the parallel port mode. You can select SPP (Standard Parallel Port), ECP (Extended Capabilities Port), EPP (Enhanced Parallel Port), or ECP + EPP.

Parallel Port IRQ (7)

Use this item to assign either IRQ 5 or 7 to the parallel port.

Parallel Port DMA (3)

Use this item to assign a DMA channel to the parallel port. The options are 0, 1 and 3.

OnBoard Game Port (201h)

Use this item to enable or disable the onboard Game port.

OnBoard MIDI Port (300h)

Use this item to enable or disable the onboard MIDI port, and to assign a port address.

MIDI Port IRQ (10)

Use this item to assign an IRQ to the MIDI port.

Onboard PCI IDE (Both)

Use this item to enable or disable either or both of the onboard Primary and Secondary IDE channels.

Audio Device (Enabled)

This item enables or disables the onboard AC' 97 audio chip.

Modem Device (Enabled)

This item enables or disables the onboard AC' 97 modem chip.

Ethernet Device (Enabled)

This item enables or disables the onboard Ethernet LAN.

Onboard USB Function (Enabled)

Enable this item if you plan to use the USB ports on this mainboard.

USB Function for DOS (Disabled)

Enable this item if you plan to use the USB ports on this mainboard in a DOS environment.

ThumbDrive for DOS (Disabled)

Enable this item to make a small portion of memory storage device for the USB ports.

CPU PnP Setup

This page lets you manually configure the mainboard for the CPU. The system will automatically detect the kind of CPU that you have installed and make the appropriate adjustments to the items on this page.

| AMIBIOS SETUP – CPU PnP SETUP | |
|--|-------------|
| (C) 2000 American Megatrends, Inc. All Rights Reserved | |
| CPU Type | Intel P4 |
| CPU/DRAM Speed | 100/100 MHz |
| CPU Core Voltage | 1.616V |
| CPU Ratio | H/W TRAP |
| CPU Frequency | 100 MHz |
| DRAM Frequency | 100 MHz |
| ESC : Quit - - - ® : Select Item | |
| F1 : Help PU/PD/+/- : Modify | |
| F5 : Old Values (Shift)F2 : Color | |
| F6 : Load Optimal values | |
| F7 : Load Best performance values | |

CPU Type/Core Voltage/Ratio/ Frequency

These items show the type, core voltage, ratio and frequency of CPU installed in your system.

CPU/DRAM Speed/Frequency

These items decide CPU/DRAM speed/frequency installed in your system.

Hardware Monitor

This page sets some of the parameters for the hardware monitoring function of this mainboard.

| AMIBIOS SETUP – HARDWARE MONITOR (C) 2000 American Megatrends, Inc. All Rights Reserved | | |
|--|-----------|---------------------------------------|
| *** System Hardware *** | | |
| Vcore | 1.632V | |
| Vcc 1.8V | 2.496V | |
| Vcc 3.3V | 3.392V | |
| Vcc | 4.972V | |
| +12V | 11.968V | |
| SB3.3V | 3.472V | |
| -12V | -11.885V | |
| SB5V | 5.053V | |
| VBAT | 3.488V | |
| SYSTEM Fan Speed | 0 RPM | ESC : Quit - - - ® : Select Item |
| CPU Fan Speed | 1308 RPM | F1 : Help PU/PD/+/- : Modify |
| SYSTEM Temperature | 31°C/87°F | F5 : Old Values (Shift)F2 : Color |
| CPU Temperature | 37°C/98°F | F6 : Load Optimal values |
| | | F7 : Load Best Performance Values |

CPU / System Temperature

These items display CPU and system temperature measurement.

FANs & Voltage Measurements

These items indicate cooling fan speeds in RPM and the various system voltage measurements.

Change Password

If you highlight this item and press **Enter**, a dialog box appears which lets you enter a Supervisor password. You can enter no more than six letters or numbers. Press **Enter** after you have typed in the password. A second dialog box asks you to retype the password for confirmation. Press **Enter** after you have retyped it correctly. The password is then required to access the Setup Utility or for that and at start-up, depending on the setting of the Password Check item in Advanced Setup.

Change or Remove the Password

Highlight this item, press **Enter** and type in the current password. At the next dialog box, type in the new password, or just press **Enter** to disable password protection.

Exit

Highlight this item and press **Enter** to save the changes that you have made in the Setup Utility configuration and exit the program. When the Save and Exit dialog box appears, press **Y** to save and exit, or press **N** to exit without

Using the Mainboard Software

About the Software CD-ROM

The support software CD-ROM that is included in the mainboard package contains all the drivers and utility programs needed to properly run the bundled products. Below you can find a brief description of each software program, and the location for your mainboard version. More information on some programs is available in a README file, located in the same directory as the software.

Note: Never try to install software from a folder that is not specified for use with your mainboard.

Before installing any software, always inspect the folder for files named README.TXT, INSTALL.TXT, or something similar. These files may contain important information that is not included in this manual.

Auto-installing under Windows 98/ME/2000/XP

The Auto-install CD-ROM makes it easy for you to install the drivers and software for your mainboard.

Note: If the Auto-install CD-ROM does not work on your system, you can still install drivers through the file manager for your OS (for example, Windows Explorer). Refer to Utility Folder Installation Notes later in this chapter.

The support software CD-ROM disc loads automatically under Windows 98/ME/2000/XP. When you insert the CD-ROM disc in the CD-ROM drive, the autorun feature will automatically bring up the install screen. The screen has three buttons on it, Setup, Browse CD and Exit.

Note: If the opening screen doesn't appear, double-click the file "setup.exe" in the root directory.

Setup Tab

| | |
|------------------|---|
| Setup | Click the Setup button to run the software installation program. Select from the menu which software you want to install. |
| Browse CD | <p>The Browse CD button is the standard Windows command that allows you to open Windows Explorer and show the contents of the support CD.</p> <p>Before installing the software from Windows Explorer, look for a file named README.TXT, INSTALL.TXT or something similar. This file may contain important information to help you install the software correctly.</p> <p>Some software is installed in separate folders for different operating systems, such as DOS, WIN NT, or WIN98/95. Always go to the correct folder for the kind of OS you are using.</p> <p>To install the software, execute a file named SETUP.EXE or INSTALL.EXE by double-clicking the file and then following the instructions on the screen.</p> |
| Exit | The Exit button closes the Auto Setup window. |

Application Tab

Lists the software utilities that are available on the CD.

Read Me Tab

Displays the path for all software and drivers available on the CD.

Running Setup

Follow these instructions to install device drivers and software for the main-board:

1. Click **Setup**. The installation program begins:

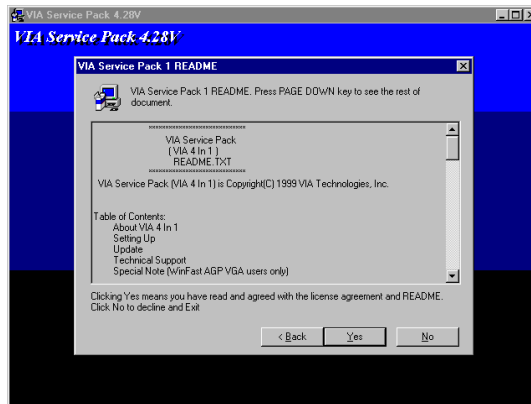

Note: The following screens are examples only. The screens and driver lists will be different according to the mainboard you are installing.

The mainboard identification is located in the upper left-hand corner.

2. Click **Next**. The following screen appears:

3. Check the box next to the items you want to install. The default options are recommended.
4. Click **Next** run the Installation Wizard. An item installation screen appears:

5. Follow the instructions on the screen to install the items. Drivers and software are automatically installed in sequence. Follow the on-screen instructions, confirm commands and allow the computer to restart a few times to complete the installation.

Manual Installation

Insert the CD in the CD-ROM drive and locate the PATH.DOC file in the root directory. This file contains the information needed to locate the drivers for your mainboard.

Look for the chipset and mainboard model; then browse to the directory and path to begin installing the drivers. Most drivers have a setup program (SETUP.EXE) that automatically detects your operating system before installation. Other drivers have the setup program located in the operating system subfolder.

If the driver you want to install does not have a setup program, browse to the operating system subfolder and locate the readme text file (README.TXT or README.DOC) for information on installing the driver or software for your operating system.

Utility Software Reference

All the utility software available from this page is Windows compliant. They are provided only for the convenience of the customer. The following software is furnished under license and may only be used or copied in accordance with the terms of the license.

Note: These software(s) are subject to change at anytime without prior notice.
Please refer to the support CD for available software.

AWARD Flash Memory Utility

This utility lets you erase the system BIOS stored on a Flash Memory chip on the mainboard, and lets you copy an updated version of the BIOS to the chip. Proceed with caution when using this program. If you erase the current BIOS and fail to write a new BIOS, or write a new BIOS that is incorrect, your system will malfunction. Refer to Chapter 3, *Using BIOS* for more information.

WinFlash Utility

The Award WinFlash utility is a Windows version of the DOS Award BIOS flash writer utility. The utility enables you to flash the system BIOS stored on a Flash Memory chip on the mainboard while in a Windows environment. This utility is currently available for WINXP\ME\2000\98SE. To install the WinFlash utility, run WINFLASH.EXE from the following directory:

UTILITY\WINFLASH 1.51

PC-CILLIN 2002

The PC-CILLIN 2002 software program provides anti-virus protection for your system. This program is available for Windows 2000/ME/98SE/XP and Windows NT. Be sure to check the readme.txt and install the appropriate anti-virus software for your operating system.

We strongly recommend users to install this free anti-virus software to help protect your system against viruses.

MediaRing Talk – Telephony Software

To install the MediaRing Talk voice modem software for the built-in modem, go to the directory \UTILITY\MEDIARING TALK, then run MRTALK-SETUP72.EXE to install the application software.

Super Voice – Fax/Modem Software

To install the Super Voice voice, fax, data communication application for use with the built-in fax/modem, go the directory \UTILITY\SUPER_VOICE, then run PICSHELL.EXE to install the application software.

CD Ghost

The CD Ghost software enables you to create a virtual cabinet of CD-ROM drives on your system to help you categorize and organize your CD collection. A user-friendly interface assists you in quickly creating images of both CDs and DVDs onto your system. To install the software, run SETUP.EXE from the following directory:

\UTILITY\CDGHOST\ENG\CDGHOST

Recovery Genius

The Recovery Genius software program is an innovative windows application system that protects your Hard Disk Drive from virus intrusion, accidental deletions and from system corruption. To install the Recovery Genius software program run SETUP.EXE from the following directory:

\UTILITY\RECOVERY GENIUS\ENG\RECOVERYGENIUS

Language Genius

The Language Genius is a software –based product that helps you to learn new languages. To install the Language Genius software program run SETUP.EXE from the following directory:

\UTILITY\LANGUAGE GENIUS\ENGLANGUAGEGENIUS

PageABC

The PageABC application software enables you to create your very own home page. To install the PageABC, go to the directory \UTILITYPageABC, and then run SETUP.EXE to install the application software.

This concludes Chapter 4.
