INTRODUCTION

The motherboard is a 4-layer, new standard ATX Form Factor high-performance mainboard. It includes Intel 82430VX system chipset, Winbond W83877F Super I/O controller.

1.1 GENERAL SPECIFICATION

Processor

- *Intel Pentium P54C, P55C series.*
- *Cyrix 6x86 and AMD-K5 64-bit microprocessor.*
- *The mainboard can run with following speeds:
75, 90, 100, 110, 120, 133, 150, 166, 180 and 200MHz*

Chipset

- *Intel 82437VX System Controller (TVX)*
- *Intel 82371SB PCI ISA IDE Xcelerator*
- *Intel 82438VX Datapath (TDX) EDS*
- *Winbond W83877F Super I/O Controller*

Cache Size

- *Built in 256KB Synchronized Pipelined Burst Mode SRAM to achieve the high Pentium system performance.*
- *COASt Connector is available for expanding the cache size to 512KB through cache modules.*

Main Memory

- *Supports Mixed memory Technologies: - EDO (Extended Data Output), Standard Page Mode (SPM), Fast Page Mode (FPM), and Synchronous DRAM (SDRAM) SIMM can work together.*
- *Memory configurations from 4MB to 128MB are possible using combination of 512K*32 to 8M*32 SIMM module. (32Bits non-parity 72-pin SIMM Module) and 2M*32 to 8M*32 SDRAM DIMM module.*
- *DIMM socket for SDRAM (3.3V unbuffered).*

Multi I/O

- *On board Multi-I/O supports two serial, one parallel ports and floppy drive controller.*
- *Serial ports are 16550 Fast UART compatible.*
- *Parallel port has EPP and ECP capabilities.*
- *PS/2 mouse and keyboard supported*
- *IrDA support (optional)*
- *Two Standard USB connectors support (optional)*

PCI IDE

- *On board supports PCI Master IDE Controller, two connectors support up to four IDE devices such as HDD, CD ROM drive and Tape Back-up drives, etc.*
- *PCI Master IDE controller supports PIO Mode 3 and 4 devices,*

Introduction

*I/O data
transfer rate can be up to 17Mb/s. DMA mode transfer rate
can be up
to 22Mb/s.*

System BIOS

- *Award/AMI BIOS (128KB Flash EPROM).*

Slots

- *Four PCI Slots (one shared slot)*
- *Four ISA Slots (one shared slot)*

Board

- *4 Layer*

Form Factor

- *Standard ATX Size (305 x 210mm)*

Introduction

1.2 MAINBOARD COMPONENTS

This section gives a brief description of key components on the mainboard. Please refer to Fig 1 for component locations.

CHAPTER 2 MEMORY CONFIGURATION

2.1 SYSTEM MEMORY

The Mainboard lets user upgrade system memory via SIMM sockets and DIMM socket on the mainboard. Four SIMM sockets (SIM1, SIM2, SIM3, SIM4) are provided for SPM, FPM and EDO DRAM SIMM and one DIMM socket (M2) is available for the SDRAM DIMM.

On board memory is located in two banks:

Bank 0: SIM1 & SIM2 - which are assigned as row 0 (when single sided SIMMs are used) or row 0, 1 (when double sided SIMMs are used) by the System BIOS.

OR

M2 - which is assigned as row 0, 1 for SDRAM.

Bank 1: SIM3 & SIM4 - which are assigned as row 3 (when single sided SIMMs are used) or row 3, 4 (when double sided SIMMs are used) by the System BIOS.

2 SIMM sockets are used as a single bank or the only one DIMM socket form a single bank itself. User can use the combination of 4M, 8M, 16M or 32M SIMM; 8MB, 16MB and 32MB SDRAM DIMM as the system memory. However, it is not recommended to install SIMM and DIMM at the same time.

- Note:**
- **The type of SIM1/SIM2 must be same.**
 - **The type of SIM3/SIM4 must be same.**
 - **SIM1/SIM2 and M2 cannot co-exist.**

-
- ***Non-parity SIMMs and DIMMs is required.***
 - ***Only 3.3V, unbuffered SDRAM DIMM can be used.***

****Note: based on above chart, the different types of SIMM can be in different bank, but within same bank, the two SIMM modules must be of same type and size. Moreover, it is not recommended to install the 5V SIMM and 3.3V DIMM at the same time.**

2.2 CACHE MEMORY CONFIGURATION

256KB secondary cache system is built in with Pipeline Burst SRAM:

Cache Tag RAM Location: U12

Size of the Tag RAM: 8Kx8, 16Kx8 or 32Kx8

Synchronous Pipeline Burst SRAM Location: U9, U10

However, user can expand the secondary cache system to 512KB by installing 256KB SRAM modules to the COAST connector M1.

CHAPTER 3

JUMPER SETTINGS AND CONNECTORS

3.1 CPU TYPE

3.1.1 INTEL PENTIUM CPU TYPE

The pentium processors have different operation voltage. In order to using the CPU Voltage correctly, the following is the marking for identify the CPU type.

Description :

X = Voltage Specification (S or V)

S = Standard Voltage (3.4V)

V = VRE 3.4 - 3.6V (3.5V)

Y = Timing Specification (S or M)

S = Standard EDS timings

M = Min Valid Delay Spec.

Z = Dual Processing Support (S or U)

S = Support DP/MP/UP

U = Not tested to support DP

3.1.2 AMD-K5 CPU TYPE

The AMD-K5 family CPU is operated on different operation voltage depending on the CPU type. The operating voltage can be known through the marking on the surface of the CPU. (The following diagram is provided as an example only. It does not necessarily indicate a valid product marking)

Description:

Operating Voltage

B = 3.45V - 3.60V

C = 3.30V - 3.465V

F = 3.135V - 3.465V

H = 2.86V - 3.0V (core)

3.30V - 3.46V (I/O)

J = 2.57V - 2.84V (core)

3.30V - 3.46V (I/O)

$K = 2.38V - 2.63V$ (core)
 $3.30V - 3.46V$ (I/O)

Jumper Settings and Connectors

3.1.3 CYRIX 6x86 CPU TYPE

The Cyrix 6x86 has different nominal voltage depends on different lot. Please refer to the CPU marking.

Marketing	Recommended Voltage	Nominal
028	3.52V	
016	3.3V	
Blank	3.52V	

3.2 SETTING THE JUMPERS

3.3 CONNECTION THE MOTHERBOARD

Once the mainboard have been fastened into the system case, the next step is to connect the internal cables. The internal cables are wire leads with plastic female connectors that attach to the connectors. The mainboard connectors have varying numbers of pins and are the points of contact between the mainboard and other parts of the computer.

A description of each connector and its connector pins follows. See Fig. 3 for the location of the connectors on the mainboard.

Note: Before making connectors on the board, make sure that power to the system is turned off.

3.3.1 JUMPER PRESENTATION

3.3.2 JUMPER CONVENTION OF THE MOTHERBOARD

Different colour of jumper caps (mini-jumpers) are used on the board to represent different usage of the jumpers:

Red : CPU Clock setting

Black: Other

Jumper Settings and Connectors

3.3.3 CONNECTOR LOCATIONS

3.4 CONNECTORS

3.4.1 J1 - RESET SWITCH CONNECTOR

Attach the Reset switch cable to this connector. The Reset switch restarts the system.

3.4.2 J2 - SMI SWITCH

J2 is for SMI Break Switch Setting. When J2 is trigger from OPEN to CLOSE and back to OPEN, the system would suspend immediately.

Jumper Settings and Connectors

3.4.3 J3 - SUSPEND LED CONNECTOR

J3 is usually connected to a LED on front of the system case. If the system board select is in Suspend mode, the indicator lights on.

3.4.4 J4 - SPEAKER CONNECTOR

J4 is a four pins connector, which is used to connect with a speaker.

3.4.5 J5 - HDD LED CONNECTOR

J5 is usually connected to a HDD LED on front of the system case. If the HDD is in operation, the indicator lights during operation.

3.4.6 J6 - KEYLOCK CONNECTOR

J6 is a keylock connector that enables and disables the keyboard.

Jumper Settings and Connectors

3.4.7 J7 - SECONDARY IDE CONNECTOR

J7 locates under to J8, the primary IDE connector. Please refer to Fig. 3 for its location.

3.4.8 J8 - PRIMARY IDE CONNECTOR

The bootable Hard Disk must connect to this Primary IDE Connector. Please refer to Fig. 3 for its location.

3.4.9 J9 - FLOPPY DRIVE CONTROLLER

J9 locates under the SIMM sockets. Please refer to Fig. 3 for its location. This Floppy drive controller also supports 2.88M FDD format.

3.4.10 J10 - IrDA CONNECTOR

J10 is a IrDA connector that using UART2 as interface for IrDA Infrared and HP SIR.

3.4.11 J11 - USB0 CONNECTOR (OPTIONAL)

A five-pin connector, located right side of the DIMM Socket M2. It is used to connect with the USB (Universal Serial Bus) cable and is defined as USB0.

3.4.12 J12 - USB1 CONNECTOR (OPTIONAL)

A five-pin connector, left side of J11, is used to connect with the USB cable. It is defined as USB1, and its pin assignment is same as J11.

3.4.13 J14 - SERIAL PORT 2

J14, a D-Type 9 pins male connector, locates on the rear of the mainboard, near the SIMM socket.

3.4.14 J15 - PARALLEL PORT

J15, a D-Type 25 pins female connector, locates on the rear of the mainboard.

Jumper Settings and Connectors

3.4.15 J16 - PS/2 MOUSE CONNECTOR

A six-pin female mini DIN connector is located at the rear of the mainboard. Plug the jack on the PS/2 mouse cable into this connector.

3.4.16 J17 - PS/2 KEYBOARD CONNECTOR

A six-pin female mini DIN connector is located at the rear of the mainboard. Plug the jack on the PS/2 keyboard cable into this connector.

3.4.17 J18 - SERIAL PORT 1

Both COMA and B are 16550 fast UART compatible. J18 is a D-Type 9 pins male connector, locates on the right upper corner

Jumper Settings and Connectors

of the mainboard.

3.4.18 J19 - POWER SUPPLY CONNECTOR

The power supply connector has two six-pin male header connectors. Plug the dual connectors from the standard power AT power supply power directly onto the board connector.

3.4.19 J20 - ATX POWER CONNECTOR

J20 is a 2x10 pin male header connector located at the right lower corner of the mainboard. Plug the power connector of the ATX power supply onto the connector.

3.4.20 J21 - OPTIONAL FAST IR CONNECTOR

J21 is a five-pin connector, which is used with J10 as fast IR Interface.

3.4.21 JP4 - REMOTE POWER SWITCH

Chapter 3

JP4 is connected to the power switch on the front panel of the computer case. The power supply will be switch on or off through the switch.

CHAPTER 4 AWARD BIOS SETUP GUIDE

This following manual is specially provided for the BIOS supported system. After the configuration of the mainboard, and have assembled the components, user can turn on the completed system. At this point, run the software setup to ensure that the system information is correct.

The software setup of the system board is achieved through Basic Input-Output System (BIOS) programming. Use the BIOS setup program to tell the operating system what type of devices (such as disk drives) are connected to the system board.

The system setup is also called CMOS setup. Normally, users need to run system setup if either the hardware configuration is not identical with information contained in the CMOS RAM, or the CMOS RAM has lost power.

4.1 AWARD BIOS SETUP

The setup program provided with the mainboard is the Award BIOS from Award Software, Inc. Enter the AWARD Setup program's Main Menu as follows:

- 1. Turn on or reboot the system. After a series of diagnostic check, the following message appear:*

"Press DEL to enter SETUP"

Chapter 4

2. Press the key to enter the AWARD BIOS setup program and the following screen appears:

A short description of the screen items follows:

Virus Warning: Enable Virus from invading the Boot area in either Hard Disk or Floppy Drive.

CPU Internal Cache: Choose Enabled or Disabled. This option lets user choose whether to use CPU internal cache memory. The default is Enabled.

Chapter 4

External Cache: Choose *Enabled* or *Disabled*. This option lets user choose whether to use secondary cache memory. The default is *Enabled*.

Quick Power On Self Test: Choose *Enabled* or *Disabled*. This option let the POST sequence runs longer for through tests.

Boot Sequence: With the default setting the BIOS first attempts to boot from drive A: and then, if unsuccessful, from hard disk C:. User can reverse this sequence with "C: A:", but then drive A: cannot boot directly.

Swap Floppy Drive: Choose *Enabled* or *Disabled*. This option lets end users to change the Drive A: or B: to others.

Boot Up Floppy Seek: Choose *Enabled* or *Disabled*. "Disabled" provides a fast boot and reduces the possibility of damage to the heads.

Boot Up NumLock Status: Choose *On* or *Off*. On puts numeric keypad in Num Lock mode at boot-up. Off puts numeric keypad in arrow key mode at boot-up.

Boot Up System Speed: Choose *High* or *Low*. Set the CPU timing at Boot Up, the default is high.

Gate A20 Option: Choose *Fast* or *Slow*. The system switch back an forth from real mode to virtue mode, fast means the system will switch through logic, slow through keyboard. The default is *Fast*.

Typematic Rate Setting: Choose *Enabled* or *Disabled*. Enabled will determines the typematic rate defined by following two options.

Award BIOS Setup Guide

Typematic Rate: *The number selected 6,8,10... indicates how fast the number of characters can response in one second.*

Typematic Delay (Msec): *The number selected indicates the time period between two identical keys appear.*

Chapter 4

Security Option: Choose Setup or System. If system is selected, the password should be set.

PCI/VGA Palette Snoop: Select Disabled or Enabled. If Enabled the MPEG Card can synchronised with PCI/VGA.

Assign IRQ for VGA: Select Disabled or Enabled. Disable this option will make the system BIOS not assign IRQ for the VGA card, so one more IRQ can be spare for another device.

OS Select For DRAM > 64MB: Select Disabled or Enabled. If the system memory is larger than 64MB and running OS/2, please enable this item. However, if it use other operating system, please disable this feature. Furthermore, if the system memory is less than 64MH, the BIOS will ignore this function.

Video BIOS Shadow: ROM Shadow copies Video BIOS code from slower ROM to faster RAM. Video BIOS can then execute from RAM.

C8000-CFFFF Shadow: If enabled and BIOS is present in this segment, then the BIOS is shadowed.

D0000-DFFFF Shadow: If enabled and BIOS is present in this segment, then the BIOS is shadowed.

4.4 CHIPSET FEATURES SETUP

The Advanced Chipset Setup option is used to change the values of the chipset registers. These registers control most of the system options in the computer.

Note: Change these Settings only if user is familiar with the Chipset.

A short description of the screen items follows:

Auto Configuration: When Auto Configuration is Enabled, BIOS will set the CPU Clock according to CPU speed. Otherwise, set it manually.

Chapter 4

DRAM Timing: Choose 60ns or 70ns according to the DRAM SIMM Module on the motherboard.

DRAM Read Burst (EDO/FP): This sets the timing for burst mode reads from DRAM:

x444/x444	Read EDO and FP DRAM Timings are x-4-4-4.
x333/x444	Read EDO DRAM Timings are x-3-3-3, and FP DRAM's are x-4-4-4.
x222/x333	Read EDO DRAM Timings are x-2-2-2, and FP DRAM's are x-3-3-3.
x322/x333	Read EDO DRAM Timings are x-3-2-2, and FP DRAM's are x-3-3-3.

DRAM Write Burst Timing: This sets the timings for burst write to DRAM:

x444	Write DRAM timings are x-4-4-4
x333	Write DRAM timings are x-3-3-3
x222	Write DRAM timings are x-2-2-2

Fast EDO Path Select: Choose Enabled or Disabled. This feature is valid for using EDO DRAM only. Enabled this feature will select a fast path for CPU to DRAM read cycles for the lead off.

Refresh RAS# Assertion: "4 Clks" or "5 Clks" options are available. This is used to # set the number of clocks RAS# is asserted for refresh cycles of the DRAM.

Award BIOS Setup Guide

ISA Bus Clock: It is used to select the bus clock for the ISA bus. The available options are "PCICLK/4" and "PCICLK/3", the suggested setting are:

CPU Clock	ISA Bus Clock
50/55MHz	PCICLK/4
60/66MHz	PCICLK/3

SDRAM (CAS Lat/RAS-to-CAS): It is used to set the CAS# latency and the RAS to CAS delay for all SDRAM cycles.

SDRAM (CAS Lat/RAS-to-CAS)	CAS# latency	RAS to CAS delay
3/3	3 Clock	3 Clock
2/2	2 Clock	2 Clock
3/2	3 Clock	2 Clock

System BIOS Cacheable: Choose Enabled or Disabled. "Enabled" allows system BIOS be cacheable.

Video BIOS Cacheable: Choose Enabled or Disabled. "Enabled" allows Video BIOS to be cacheable.

Memory Hole At 15M-16M: Choose Enabled or Disabled. "Enabled" allows some linear VGA Cards to run larger frame port, or it can be reserved or some operating system.

Peer Concurrency: Choose Enabled or Disabled. To enable this option will let the system active more than one PCI Device at a time.

4.5 POWER MANAGEMENT SETUP MENU

Note: Change these Settings only if user is familiar with the Chipset and system power management functions.

A short description of the screen items follows:

Power Management: Available selection are "Disabled", "User Define", "Max Saving" and "Min Saving":

"Disabled" will disable all the power saving functions.

"User Define" makes the time period waiting for Suspend Mode to be programmed.

"Max Saving" will set the time period waiting for Suspend Mode to be 20 seconds.

"Min Saving" will set the time period waiting for Suspend Mode to be 40 minutes.

PM Control by APM: Available options are "Yes" and "No". To choose "Yes" to let the Power Management Function to be control by the MS APM software.

Video Off Method: Choose V/H SYNC+Blank, DPMS or Blank Screen. This is monitor Power Saving Method. V/H SYNC+Blank means turn off Vertical, Horizontal scanning and blank the screen. Blank Screen will blank the display screen. DPMS (Display Power Management System) can allow the System BIOS control the Display Card to turn off the Display.

Suspend Mode: To set the time period waiting for Suspend Mode when the Power Management function is set to "User Define".

HDD Power Down: To select the time period will turn the HDD off. Accessing the HDD again will take a few seconds for HDD to spin up for operation.

IRQ 3 - IRQ15: When it is enabled, the system will monitor the activity of the corresponded system IRQ to turn on or off the power management functions.

4.6 PCI CONFIGURATION SETUP

The PCI Configuration Setup option is used to configure the PCI add-on Cards on PCI Slots. Without proper setup the PCI Add-on Cards might not function properly.

Note: Change these Settings only if user is familiar with the Chipset and all the PCI Add-on Cards functions.

A short description of the screen items follows:

Resources Controlled By: Available options are "Manual" and "Auto". If "Auto" is selected, the system BIOS will use the ESCD with the legacy information. If "Manual" is selected, the BIOS will not refer the ESCD for IRQ and DMA information. Instead, it will refer the items in the items in this setup menu for assigning IRQ and DMA.

Reset Configuration Data: If enable this option, the BIOS will clear and reset the ESCD after hardware reset.

IRQ#/DMA# assigned to: These items will be shown only when "Resources Controlled By" option is set the "Manual". The available options are "Legacy ISA:" and "PCI/ISA PnP". If the option is set to "Legacy ISA", the BIOS will never assign the specified IRQ/DMA resource to PCI or ISA PnP Devices. If "PCI/ISA PnP" is chosen, the BIOS will make the specified IRQ/DMA have a chance to be assigned to the PCI or ISA PnP devices.
