Chapter 1 Specification

Introduction

This mainboard features an integration of the powerful processor Intel Pentium 4 and the single-chip North Bridge Intel 845GE. The Intel P4 processor is a rapid execution engine providing 533/400MHz system bus, while North Bridge Intel 845GE is a high performance integrated chipset providing processor interface, DDR333/266/200 DRAM memory interface, Hub interface, AGP interface as well as an integrated 2D/3D Graphics interface with CRT display port.

Integrated with i845GE, South Bridge Intel ICH4 supports the LPC Super I/O, upstream Hub interface, PCI interface, IDE interface, LAN interface, USB interface, AC'97 Audio interface and the interrupt control. This chapter is to introduce to users every advanced function of this high performance integration.

Topics included in this chapter are:
1-1 Mainboard Components Locations

1-2 Mainboard Specifications

1-2.1 CPU Socket

CPU Socket 478 on board, supporting Intel® Pentium 4 processors (including Hyper-Threading CPUs) in 478-pin package for :

-- 533/400MHz System Bus;
-- Hyper-pipelined technology;
-- Advanced dynamic execution;
-- Advanced transfer cache;

1-2.2 System Chipsets

North Bridge Intel 845GE plus South Bridge Intel ICH4 working with Intel Pentium 4 Processor for managing and arbitrating operations between system interfaces:

1-2.3 Memory

2 DDR DIMM 184-pin slots on board for DDR 333/266 DRAMs :
• Supporting unregistered, non-ECC DDR333/266 DRAM up to 2 GBs
• Supporting installation of mixed volumes yet same type of DDR DRAM modules

1-2.4 AMI BIOS

• Supporting Plug & Play V1.0
• Flash Memory for easy upgrade
• Supporting Year 2000 compliant
• Supporting BIOS Setup (See Chapter 4 BIOS Setup)

1-2.5 Accelerated Graphics Port (AGP)

AGP Controller embedded on board, supporting:
• 1.5V(4X) power mode only
• 4x AD and SBA signaling, AGP pipelined split-transaction longburst transfers up to 1GB/sec.
• AGP 4X only, AGP V2.0 compliant; 1 AGP Slot on-board

1-2.6 Integrated VGA in North Bridge

• Built-in VGA Graphics Interface in i845GE, supporting one 15-pin con-
   nector on board for CRT 2D, 3D VGA display
• VGA display safeguarded by jumper setting (see Jumper Setting sec-
   tion for VGA select)
• VGA Driver enclosed in Support CD for user's installation

1-2.7 Advanced System Power Management:

• ACPI 1.0B compliant (Advanced Configuration and Power Interface)
• APM V1.2 compliant (Legacy Power Management)
• ACPI POS (Power On Suspend)
• Keyboard/Mouse Power On/Wake Up
• Supporting Wake-on-LAN
• Real Time Clock (RTC) with date alarm, month alarm, and century
   fields

1-2.8 Multi-I/O Functions :

• PCI EIDE Controller, supporting:
      -- 2x Ultra ATA100 / 66 / 33 IDE connectors supporting up to 4 IDE
         devices
• Dedicated IR Functions:
      -- 2-pin IR Connector for the third serial port dedicated to IR transmission
      functions
• Multi-mode parallel data transfer:
      -- Standard mode, high speed mode ECP and enhanced mode EPP
• Floppy Disk connector:
      -- One FDD connector supporting 2 floppy drives with drive swap support
• Universal Serial Bus Transfer Mode:
      -- USB V2.0 compliant; 480Mb/s USB Bus, supporting Windows 2000 / XP
      -- USB V2.0 drivers provided in Support CD for installation
      -- 2 built-in USB connectors and 2 USB Headers (USB2, USB3) which
         require 2 optional USB cables to provide 4 more optional USB ports
• PS/2 Keyboard and PS/2 Mouse
• UARTs (Universal Asynchronous Receiver / Transmitter):
      -- COM1 Serial Port and DCOM1 on board

1-2.9 6-channel Audio-out Support (optional)

• This series is designed with an optional 6-channel Audio-out connector "Audio1". If this option is chosen, an Audio-out card will be enclosed in the mainboard package to provide 3 additional audio-out ports for the 6-channel sound.

1-2.10 Form Factor

• Micro-ATX Form Factor, ATX power supply, version 2.03 compliant, supported by one Main Power Connector, one +12V Power Connector
• Mainboard size: 245mm x 245mm

1-2.11 Expansion Slots

• 3 PCI bus Master slots
• 1 AGP 4X slot
• 2 DDR DIMM slots

1-2.12 LAN (Local Area Network) on board (85MIR2-L only)

PCI local bus single-chip Fast Ethernet Controller RTL8101L on board:
• Supporting 10/100Mb data transfer
• Supporting Wake On LAN function through the on-board RJ45 LAN Connector
• LAN Controller Driver enclosed in Support CD for user's installation

1-2.13 Hardware Monitor on board

• Hardware Monitor in I/O chip IT8712F, providing flexible desktop management of hardware voltage, temperatures and fan speeds.
• Utility Software Smart Guardian for displaying working system status is enclosed in Support CD for user's installation.

1-2.14 AC'97 Audio Codec on board

AC'97 Audio Codec 2.2 compliant on board
• Supporting up to 6 channels of PCM audio output
• 6 channel audio consists of Front Left, Front Right, Back Left, Back Right, Center and Sub-woofer for complete surrround sound effect
• AC'97 Audio Codec Drivers enclosed in Support CD for user's installation.

1-3 Mainboard Specification Table

SL-85MIR2 / 85MIR2-L Specifications and Features	
CPU	Socket 478B for Intel P4 CPU (HT CPU included)
North Bridge	Intel 845GE, supporting 533/400MHz System Bus
South Bridge	Intel ICH4
BIOS	AMI BIOS
Memory	Supporting DDR 333/266/200DRAM, up to 2GB in two DDR DIMM slots
I/O Chip	IT8712F
AGP interface	AGP4X mode only
Audio	AC'97 Audio V2.2 compliant, 6-channel audio
IDE Interface	2 UATA 33/66/100 IDE ports
Networking	Fast Ethernet Controller, 1 RJ45 (for 85MIR2-L)
PCI Slots	3 PCI Master slots on board
I/O Connectors	6 USB ports (V2.0), 1 FDD port, 2 COM ports, 1 LPT, 1 IrDA, 1 PS/2 K/B, 1 PS/2 Mouse,
VGA Display	1 VGA connector on board for CRT VGA display
Other Features	Hardware Monitoring in IT8712F Keyboard/ Mouse Power On/Wake Up ATX 2.03 Power Supply; Micro-ATX form factor

1-4 Chipset System Block Diagram

Pentium 4 + Intel 845GE + Intel ICH4 Diagram

Chapter 2 Hardware Setup
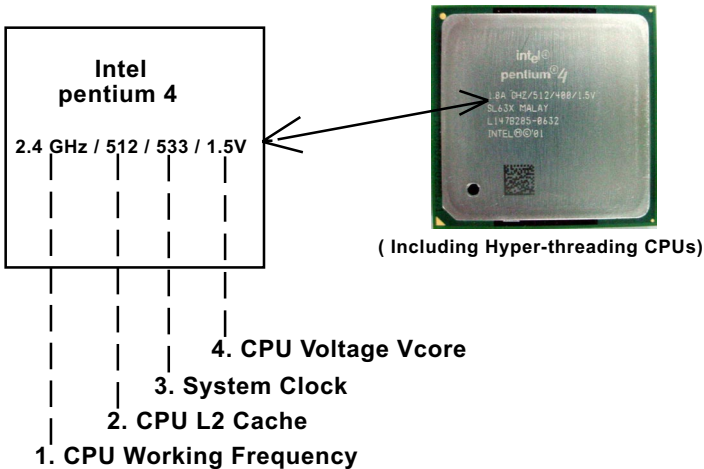

To Get things ready for hardware setup !

1. We recommend to install your CPU before any other components. For detailed installation instructions of processor, you can also refer to the pamphlet enclosed in your CPU package.
2. Installing a cooling fan with a good heatsink is a must for proper heat dissipation for your CPU. Get ready an appropriate fan with heatsink for proper installation. Improper fan and installation will damage your CPU.
3. In case CPU Vcore, CPU clock or Frequency Ratio is adjustable on board, please follow the instructions described in the User Manual for proper setup. Incorrect setting will cause damage to your CPU.

The following topics are included in this chapter:

2-1 Pentium 4 CPU Installation
2-2 Pentium 4 CPU Fan Installation
2-3 Memory Installation
2-4 AGP 4X Installed with Jumper and LED Safeguard
2-5 IDE Connector Installation
2-6 Floppy Drive Connector (FDC) Installation
2-7 ATX 2.03 Power Supply Installation
2-8 Jumper Settings
2-9 Other Connectors Configuration

2-1 CPU Identification and Installation

2-1.1 To Identify a Pentium 4 CPU

**Intel
pentium 4**

2.4 GHz / 512 / 533 / 1.5V

(Including Hyper-threading CPUs)

4. CPU Voltage Vcore
3. System Clock
2. CPU L2 Cache
1. CPU Working Frequency

On the heatsink side of a Pentium 4 CPU, there printed a line of figures to identify its specifications. The line consists of 4 parts:
1. CPU Working Frequency: this part depicts the working frequency of the CPU. For example,
   2.4 GHz depicts that this CPU is locked to 2.4 GHz working frequency (18 x 133MHz CPU clock);
   2A GHz depicts that this CPU is an A version, locked to 2.0 GHz working frequency (20 x 100MHz CPU clock)
   3.06GHz depicts that this is a 3.06GHz hyper-threading CPU.
2. CPU L2 Cache: this part depicts the L2 Cache size. For example,
    512 stands for 512 KB L2 Cache; 256 stands for 256 KB L2 Cache
3. System Clock: this part depicts the System Clock (Front Side Bus) provided by the CPU. For example,
   533 stands for a 533MHz system clock provided by a 133MHz CPU times 4;
   400 stands for a 400 system clock provided by a 100 MHz CPU x 4.
4. CPU Voltage Vcore: this part depicts the CPU Voltage. For example, 1.5V stands for a CPU of 1.5V Vcore.

Note: System Clock vs CPU Clock
P4 CPU is a quadpumped CPU. The system bus is provided by the CPU clock x 4. Therefore, users can figure out the P4 CPU clock by the System Clock divided by 4.

### 2-1.2 CPU Installation with Socket 478B

This mainboard is built with CPU Socket 478B (478-pin) supporting the Intel Pentium 4 CPU:

• Follow the steps described in this section to install the 478-pin Pentium 4 CPU into the on board Socket 478.

• After installation of Pentium 4 CPU, you must also install the specific Pentium 4 CPU fan designed in tandem with this CPU. This CPU Fan installation is described in next section.

• This mainboard supports Hyper-threading dual-in-one CPU, the function of which can be enabled by Windows XP. (See illustration on the right.)

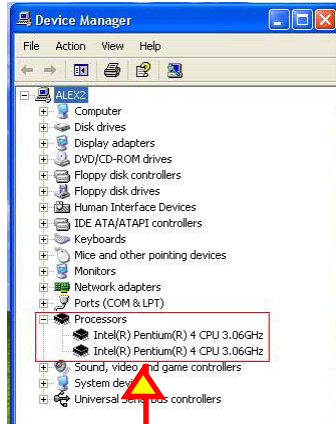

(If Hyper-threading CPU is installed successfully with O/S Win XP, the O/S will enable the dual-in-one CPU function.)

1. First pull sideways the lever of Socket 478, and then turn it up 90^0 so as to raise the upper layer of the socket from the lower platform.
Pin 1

2. Configure Pin 1 of CPU to Pin 1 of the Socket, just as the way shown in the diagram on the right. Adjust the position of CPU until you can feel all CPU pins get into the socket with ease.

Pin 1
3. Make sure that all CPU pins have completely entered the socket and then lower down the lever to lock up CPU to socket.

Pin 1

18
2-2 Pentium 4 CPU Fan Installation

CPU Fan Connector   Pentium 4 Fanbase

Press down 4 corners to lock fan to fanbase

Connect Fan Connector to CPU FAN connector

2-3 Memory Installation

How to tackle the memory Modules:
- Make sure to unplug your power supply before adding or removing memory module. Failure to do so may cause severe damage to both your mainboard and the memory module.
- Pay attention to the orientation of the DIMM slots. Forcing a DIMM into a slot improperly will damage the memory module and slot itself.
- Make sure you have the right type of memory module for your mainboard.

2-3.1 To Install DDR DRAM Module for this Mainboard

- This Mainboard only supports up to 2GB unbuffered DDR 333/266 DRAM, with 2 DDR DIMM slots on board. <u>Do not insert other type of modules into these slots.</u>

- DDR DIMM slot has 184-pins and one notch. Insert a DDR DRAM vertically into the 184-pin slot with the notch-to-rib matching. Press the Module down in a gradual way until it surely reaches the bottom and clicks straight up the two latches on the left and right of the slot. If any one of the latches has not turned up completely, you should unplug the module and press it down a bit more firmly.
184-Pin DIMM Notch Key Definitions

DRAM Key Position   Voltage Key Position

(2.5V Voltage Key)DDR Notch ———————— DDR Rib

Module Latch

2-3.2 To Remove a DIMM:
- Press down the holding latches on both sides of the DIMM slot and the module will be released from it.
2-4 Install VGA / AGP 4X with LED1 & Jp4 Safeguard

1. To install on-board VGA, please connect your monitor directly to VGA connector on board. Default Jp4 at 2-3 closed is to assure booting system with on-board VGA or 1.5V AGP 4X add-on card yet without safeguard against 3.3V AGP2X card.

  * That is, if 3.3V AGP 2X card is mistakenly inserted for booting the system, the high voltage will burn the 1.5V circuitry on board. Never use a 3.3V or an unknow AGP card in this case.

2. To install AGP 4X card on this mainboard, please insert AGP 4X card into AGP slot and connect your monitor directly to the AGP 4X card. To assure the use of a correct AGP 4X card of 1.5V, please set Jp4 to 1-2 closed to allow only 1.5V AGP 4X card to boot system. With Jp4 1-2 closed, safeguard is enabled against AGP 2X card. That is, system cannot boot with 3.3V AGP 2X card or on-board VGA. In this case, if user cannot boot with an AGP card inserted in AGP slot, it indicates that the AGP card is a wrong one. Find a 1.5V AGP 4X card before booting this system.

3. LED1 is a Warning LED. Whenever the AGP slot is empty, or if a wrong AGP card is inserted in AGP slot, LED1 will keep lighting up until a proper installation is done.

AGP Accelerator

Jp4: VGA/AGP4X Safeguard

1-2 closed
Safeguard against AGP2X Enabled;
1.5V AGP 4X Card to boot system only

2-3 closed (default)
Safeguard Disabled;
VGA or AGP 4X to boot system (Warning: 3.3V AGP card will cause 1.5V circuit burn.)

VGA Connector

LED1: AGP Installation Warning LED
2-5 IDE Connector Installation

To install IDE Connector, you may connect the blue connector of IDE cable to the primary (IDE1) or secondary (IDE2) connector on board, and then connect the gray connector to your slave device and the black connector to your master device. If you install two hard disks, you must configure the second drive to Slave mode by setting its jumpers correctly. Please refer to your hard disk documentation for the jumper settings.

IDE2

IDE1

Hard Disk Drive Connector

Orient the red line on the IDE Flat Cable to Pin1.

Pin 1 (to Red Line)

Gray connector
(To Slave device)

Black connector
(To Master Device)

80-conductor cable
Red line

Blue connector
(To Mainboard)

IDE Flat Cable

2-6 Floppy Drive Connector (FDC) Installation

To install FDC, you should connect the end of FDC cable with single connector to the board , and connect the other end with two connectors to the floppy drives.

FDC

Floppy Drive Connector:

Orient the red line of the Floppy Flat Cable to Pin1.

Pin 1 (to Red Line)

Signal Swap End

To 2nd Floppy Drive

Red line

2-7 ATX V 2.03 Power Supply Installation

+12V Power Connector

GND	**GND**	
1		**2**
3		**4**
+12V	**+12V**	

Main Power Connector

+12V	+5V
5SB	+5V
PWR OK	-5V
GND	GND
+5V	GND
GND	GND
+5V	PS ON#
GND	GND
+3.3V	-12V
+3.3V	+3.3V

Pin1   Pin11

ATX V2.03 Power Supply is strongly recommended for mainboard running with 2GHz or higher CPU.

To set up Power Supply on this mainboard:

1. Connect the on-board Main Power Connector (20-pin) to the Main Power Connector (20-pin) of an ATX Power Supply which can be of the latest version 2.03 model, and then connect the square-shaped +12V Power Connector on board to the square-shaped +12V Power Connector of the Power Supply.
   Warning: Both the Main Power Connector and the +12V Power Connector should be connected to Power Supply; otherwise, the system may either not start or be damaged.
2. This ATX Power Supply should be able to provide at least 720mA/ +5V standby power for Wake On Lan function.

2-8 Jumper Settings

The following diagrams show the locations and settings of jumper blocks on the mainboard.

JP3: Keyboard/Mouse Power On / Wake Up

1-2 closed (default)
Keyboard/Mouse Power On / Wake Up Disabled

2-3 closed
Keyboard/Mouse Power On / Wake Up Enabled

Jp4: VGA/AGP4X Safeguard

1-2 closed
Safeguard against AGP2X Enabled;
1.5V AGP 4X Card to boot system only

2-3 closed (default)
Safeguard Disabled;
VGA or AGP 4X to boot system (Warning: 3.3V AGP card will cause 1.5V circuit burn.)
JDIMM1 & JDIMM2: DIMM Voltage Select

DIMM Voltage	JDIMM1	JDIMM2
2.5V **(Default)**		
2.6V		
2.7V		

JBAT1 Clear CMOS

1-2 closed
(default)
To hold data

2-3 closed
To clear CMOS
LJP1 LAN Controller Select (85MIR2-L only)

(Default) 1-2 closed
Lan Controller enabled

2-3 closed
LAN Controller Disabled

Jp8 CPU Clock Select

(Default) 1-2 closed
CPU Autodetect

2-3 closed
133MHz CPU Clock Selected

JAGP1 & JAGP2 AGP Voltage Select

AGP Voltage	Jumper Setting	
1.5V (default)		JAGP1 1-2
		JAGP2 1-2
1.6V		JAGP1 1-2
		JAGP2 2-3
1.7V		JAGP1 2-3
		JAGP2 1-2

25

How to tackle the Jumpers:

1 2 3 A 3-pin Jumper

If a pin-header (of 2 or more pins) is designed in such a way that its pins can be closed or linked together to set up a specific function, <u>this header is called a jumper in this manual.</u>

A 2-pin Jumper Cap

The conductor inside the cap links two header-pins together.
• A Jumper is usually but not necessarily given a "JpX" legend.
• In the Jumper setting diagram, the jumper pins covered with black marks stand for closed pins with jumper cap.

Jp X   **1** ⬜◉━◉ **3**   **1** ◉◉◉ **3**   **1** ◉━◉⬜ **3**

Jumper with   **Jumper with**   **Jumper with**
Pin 2-3 closed   **all Pins open**   **Pin 1-2 closed**

• Do not remove any jumper cap when power is on. Always make sure the power is off before changing any jumper settings. Otherwise, the mainboard will be damaged.

2-8.1 Jp8: CPU Clock Select

Jp8 is designed on board for CPU frequency select.

1. Setting Jp8 1-2 closed will allow CPU on board to Auto Detect its own frequency and apply it to the System Bus.

2. Setting Jp8 2-3 closed is for 133 MHz CPU. 100MHz CPU will fail to boot herewith.

3. If 100MHz CPU fails to boot system, you should restore the default setting and then clear CMOS to reboot your system. (See Clear CMOS in next paragraph.)

Jp8 CPU Clock Select
(Default) **1-2 closed** CPU Autodetect
2-3 closed 133MHz CPU Clock Selected
Further Notes on CPU Overclocking:

1. If you have successfully booted system, with or without CPU overclock, you still can try another CPU overclock in BIOS Setup. Please enter BIOS Setup, choose "Frequency/Voltage Control" menu, and then configure the "CPU Clock" item to raise your CPU clock.

2. CPU overclocking should take all components on board into account. If you fail in BIOS overclocking, you will not be able to restart system. In such case, Power off system and clear CMOS by JBAT1 and then restart your system. And remember to reconfigure whatever should be reconfigured.

3. If your system is already fixed in a cabinet or case, you may not like to take the trouble to clear CMOS. Then power on your system with the power button on the PC case and simultaneously press down the "Insert" key on the keyboard until you see the initial bootup screen appear. And remember you should also enter CMOS BIOS Setup instantly and choose "Load Optimized Defaults" to restore default BIOS .

2-8.2 JBAT1: Clear CMOS
When you have problem with rebooting your system, you can clear CMOS data and restore it to default value. To clear CMOS with Jumper JBAT1, please follow the steps below:

1. Power off system;
2. Set JBAT1 to Pin 2-3 closed.
3. After 2 or 3 seconds, return the JBAT1 setting to Pin1-2 closed.
4. CMOS data are restored to default. Remember never clear CMOS when system power is on.

JBAT1 Clear CMOS
1-2 closed (default) To hold data
2-3 closed To clear CMOS

2-8.3 LJP1: LAN Controller Select (85MIR2-L only)

LJP1 is a 3-pin jumper for enabling or disabling the on-board LAN Controller. Users can set LJP1 1-2 closed to enable the on-board LAN Controller so as to set up the LAN driver, or to set LJP1 2-3 closed to disable the on-board LAN Controller. In such case, users are free to use an add-on PCI LAN card for networking.

LJP1 LAN Controller Select
(Default) 1-2 closed Lan Controller enabled
2-3 closed LAN Controller Disabled

27

2-8.4 JAGP1 & JAGP2: AGP Voltage Select

The default voltage 1.5V at AGP slot is for normal operation of the supported AGP 4X. In some case, when you try to do CPU overclocking, you may also need to raise the voltage of the AGP card. JAGP1 & JAGP2 are designed on board to provide settings for selecting a higher AGP voltage so as to keep the whole system more stable.

Warning: Selecting a higher voltage than the default , you are risking the stability of your system.

JAGP1 & JAGP2 AGP Voltage Select	
AGP Voltage	**Jumper Setting**
1.5V (default)	JAGP1 1-2 JAGP2 1-2
1.6V	JAGP1 1-2 JAGP2 2-3
1.7V	JAGP1 2-3 JAGP2 1-2

2-8.5 JDIMM1 & JDIMM2: DIMM Voltage Select

The default voltage 2.5V at DIMM sockets is for the optimum operation of the supported DDR DRAM. In some case, when you are doing CPU overclocking, you may find a higher DIMM voltage would work better. JDIMM1 & JDIMM2 are designed on board to provide settings for adjusting the DIMM voltage so as to optimize the operation stability.

Warning: In selecting a higher voltage than the default , you are risking the stability of your system.

JDIMM1 & JDIMM2: DIMM Voltage Select		
DIMM Voltage	**JDIMM1**	**JDIMM2**
2.5V (Default)		
2.6V		
2.7V		

28

2-8.6 Jp3: KB/Mouse Power On / Wake Up

JP3 is designed on board as a jumper to enable/disable the PS/2 key-board/mouse Power On/Wake Up from system off or suspend mode. Yet users should still enter BIOS setup to choose the Wake Up/ Power On mode.

USB keyboard/mouse Wake Up function is not supported in this series.

JP3: Keyboard/Mouse Power On / Wake Up
1-2 closed (default)
Keyboard/Mouse Power On / Wake Up Disabled
2-3 closed
Keyboard/Mouse Power On / Wake Up Enabled

2-8.7 Jp4: VGA/AGP 4X Safeguard

1. Jp4 1-2 closed: Safeguard against AGP 2X card.

   To assure the use of a correct AGP4X card of 1.5V, please set Jp4 to 1-2 closed, resulting in that it will allow only 1.5V AGP 4X card to boot system. With Jp4 1-2 closed, system even cannot boot with on-board VGA. In this case, if users cannot boot with an AGP card inserted in AGP slot, it indicates that the AGP card is a wrong one. The AGP card should be changed until a 1.5V AGP4X card is inserted.

Jp4: VGA/AGP4X Safeguard
1-2 closed
Safeguard against AGP2X Enabled; 1.5V AGP 4X Card to boot system only
2-3 closed (default)
Safeguard Disabled; VGA or AGP 4X to boot system (Warning: 3.3V AGP card will cause 1.5V circuit burn.)

2. Jp4 2-3 closed (default) : Boot system with on-board VGA:
   Default Jp4 (2-3 closed) is designed to allow booting system with 1.5V on-board VGA or 1.5V AGP 4X add-on card, yet without safeguard against AGP2X card.

   If 3.3V AGP 2X card is mistakenly inserted for booting the system, the high voltage will burn the 1.5V circuitry on board. So, never use a 3.3V or an unknow AGP card in this case.

2-9 Other Connectors Configuration

This section lists out all connectors configurations for users' reference.

2-9.1 On-board FAN Connectors

Sensor
+12V
GND
Sensor Conn.

Void
+12V
GND
No Sensor

FAN1, Sensor Fan Connector

FAN2, Sensor Fan Connector

FAN3, Sensor Fan Connector
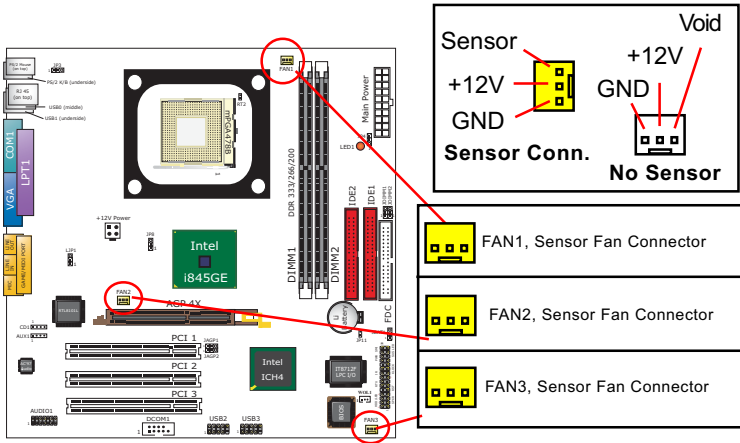

Both Sensor and No-sensor Fan Connectors support CPU/AGP/System/Case cooling fan with +12V mode. Sensor Fan Connector is yellow in color on board. When connecting the wire to any Fan Connector, user should make sure that the red wire is for the positive current and should be connected to pin +12V, and the black wire is Ground and should be connected to pin GND. A Hardware Monitor chipset is on board, with which user can install a Hardware Monitor Utility and read the fan speed transmitted from the sensor fan. Otherwise, user can read the fan speed from the "Hardware Monitor Status" in CMOS BIOS.

A running fan will send out 2 electric pulses per rotation of its fan blade. A Sensor Fan Connector will count the electric pulses and send the information to the System Hardware Monitor which in turn will work out the fan rotation speed and display it on screen.

2-9.2 Connector AUX1

This connector connects to the Video Tuner Card and acts as Audio Input connector.
Connector AUX 1

1

Pin 1 R-Channel

Pin 2 GND

Pin 3 GND

Pin 4 L-Channel

2-9.3 CD-ROM Audio Connectors (CD 1)

CD 1 is an audio connector connecting CD-ROM audio to mainboard.
CD-ROM Audio Pin Assignment
Connector CD1

1

Pin 1 Left-Channel

Pin 2 GND

Pin 3 GND

Pin 4 Right-Channel

2-9.4 Chassis Panel Connectors
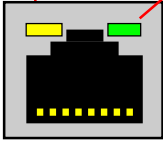

A : PS/2 MOUSE
B : LAN Port Rj45 (85MIR2-L only)
C : LPT1 PORT
D : GAME/MIDI
E : PS/2 KEYBOARD
F : USB 1 (underside) USB0 (middle)

G : COM1 Connector
H : VGA Connector
I : Line Out / Front Speaker Out
J : Line in/ Rear Speaker Out
K : Microphone Input / Center Subwoofer Out

2-9.5 LAN Connector Rj45 (85MIR2-L only)
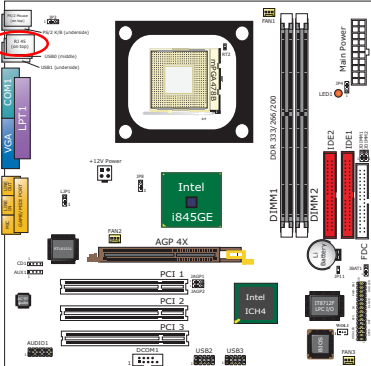

One RJ45 connector is on board for network connection and also provide support for Wake On LAN function.

Yellow LED "On" to indicate Network hub is in connection with the system.

Green LED blinks to indicate that data transmission is undergoing in 10/100 Base T mode.

RJ45 Connector

2-9.6 Thermal Sensor Connectors RT2 and Jp11

RT2

RT2 to be mounted with Thermal Resistor by default.

Jp11

To Jp11   To Devices
Thermal Cable

1. Resistor RT2: A thermal resistor is to be mounted by default to Resistor RT2 so as to detect the temperature of the CPU. What RT2 does is to transmit the thermal signal to BIOS or Hardware Monitor.

2. Connector Jp11: A thermal cable is needed to connect Jp11 to on-board devices such as HDD, Graphics card etc., so as to detect the temperature generated therein. Please connect the end (a) of the thermal cable to Jp11, and tape another end (b) of thermal cable on to the device which you want to monitor. After you have finished the thermal cable installation, you will **see the detected temperature in BIOS setup or Hardware Monitor utility.**

2-9.7 Complex Header (Front Panel Connectors)

This complex Header consists of the following Front Panel connectors for various supports:

(Optional) ① **SMI**	GND — SMI SIGNAL	GND — SUSPEND LED SIGNAL — **Suspend LED** ⑤
② **Power Switch**	Vcc — ATX POWER SWITCH	GND — KLOCK — **Keylock** ⑥ **(Optional)**
③ **Infrared(IR)**	Vcc — NO CONNECTION — INFRARED TRANSMIT SIGNAL — GND — INFRARED TRANSMIT SIGNAL	GND — NO CONNECTION — Vcc — **Power LED** ⑦
		GND — RESET SIGNAL — **Reset Switch** ⑧
2nd HDD LED	Logic High (+) — HDD LED SIGNAL (−)	SPEAKER SIGNAL — NO CONNECTION
④ **1st HDD LED**	HDD LED SIGNAL (−) — Logic High (+)	GND — Vcc — **Speaker** ⑨

34

(1) SMI Connector (Optional):
Connection: Connected to the case-mounted Suspend Switch.
Function: Manually selecting the Suspend Mode or "Green Mode" for DOS system by System mangement nterupt.

(2) Power Switch Connector:
Connection**:** Connected to a momentary button or switch.
Function: Manually switching the system between "On" and "Soft Off". Pressing the momentary button for more than 4 seconds will also turn the system off.

(3) IR Connector (Infrared Connector):
Connection: Connected to Connector IR on board.
Function: Supporting wireless transmitting and receiving module on board.

(4) 1st HDD LED Connector/2nd HDD LED Connector:
Connection: Connected to HDD LED.
Function: To supply power to HDD LED.

(5) Suspend LED Connector:
Connection: Connected to Suspend Indicator.
Function: To supply power to "Suspend Indicator".

(6) Keylock Connector (Optional):
Connection: Connected to keyboard.
Function: To lock keyboard and disable keyboard function.

(7) Power LED Connector:
Connection: Connected to System Power LED.
Function: To supply power to "System Power LED".

(8) Reset Switch Connector:
Connection: Connected to case-mounted "Reset Switch".
Function: To supply power to "Reset Switch" and support system reboot function.

(9) Speaker Connector:
Connection: Connected to the case-mounted Speaker.
Function: To supply power to the case-mounted Speaker.

2-9.8 USB Ports and USB Headers (Header USB2 & USB3)

This series provides two USB ports USB0 and USB1 on board support-ing various USB devices. In addition, two USB pin-headers are added on board to provide expansion of four more optional USB ports by us-ing two additional USB cables. Users can order the optional USB cables from your mainboard dealer or vendor.

When plugging the USB cable to USB Header, users must make sure the red wire is connected to Pin 1.

All 6 USB ports are compliant with 1.1 / 2.0 USB Bus. USB 2.0 supports Windows 2000 and up (not Windows 98SE / ME). Please see Chapter 3 for USB2.0 Installation.

2-9.11 Connector DCOM 1: for One Serial Port

DCOM1 Connector is built on board
which requires a RS232 cable to
provide a 9-pin serial connector for
a serial device connection. One
RS232 Cable is enclosed in the
mainboard package. When you in-
sert RS232 cable to DCOM1
connector, take notice that the red
line of the cable must connect to
Pin 1 of DCOM1.

Chapter 3 Software Setup

Drivers, Utilities and Software Installation

• Support CD:
This series of mainboards will be shipped with a Support CD which contains those necessary driver files, Application Softwares and some helpful utilities. It is a user-friendly, auto-run CD which will open itself up in a CD-ROM automatically.

This chapter is devoted to describing the installations of all these essential drivers and utilities on Windows 98SE, Windows ME, Windows 2000 and Windows XP. The installation procedures for all these operating systems are all programed into an auto-run mode. What users have to do is to read and follow the pop-up instructions to carry out the installation. We therefore take the installation on Windows XP as the general illustration hereby.
The priority of drivers to be installed should also be noted. Users are recommended to take the following installation orders :

3-1 To Open up the Support CD
3-2 Intel Chipset Software Installation Utility (INF Utility)
3-3 Intel Application Accelerator (IAA) Installation
3-4 Graphics Drivers Installation
3-5 AC'97 Audio Drivers Installation
3-6 Hardware Monitor Utility Installation
3-7 LAN Drivers Installation(for 85MIR2-L only)
3-8 To Install USB2.0 Drivers

3-1 To Open up the Support CD

1. Please put the Support CD enclosed in your mainboard package into the CD-ROM drive. In a few seconds, the Main Menu will automatic-ally appear, displaying the contents to be installed for this series:
2. In case your system does not open the Support CD automatically, please click to the following path to enter the Main Installation Menu:

   D:\ Autorun.exe (assuming that your CD-ROM Drive is Drive D)

3. We should take "Intel Chipset Software installation Utility" as first installation priority to optimize the Intel system.
   From next section, we provide detailed descriptions of all these installations with graphical illustrations.

3-2 Intel Chipset Software Installation Utility

1. Following the procedures of opening the Support CD, click to " Install Intel Chipset software installation Utility" to proceed.

2. The Intel Service Pack InstallShield Wizard will pop up to guide you to the Intel Service pack installation. Press **"Next"** button to continue.

Next
3. **"Intel Software License Agreement"** screen will appear, please click the **"Yes"** button to agree with the Licence Agreement and continue.

Yes
4. After all the setup process is finished, please restart your computer by clicking on "Finish" so as to take the Utility into effect.

Finish

41
3-3 Intel Application Accelerator Installation

IAA supports all Windows 98SE/ME/2000/XP with Pentium III / 4 processor. Installations of this software for these operating systems are similarly programed to an auto-run mode. It is typically designed to improve performance of the storage sub-system and overall system performance. Below is a model installation on Windows XP. Users of Windows 98SE/ME/2000 can also follow this example for IAA installation.

1. Following the procedures of opening the Support CD, click to " Intel Application Accelerator" to proceed.

2. On the "InstallShield Wizard" screen, Click on "Next" to continue.
3. On the "Licence Agreement" screen, click on "Yes" to continue.
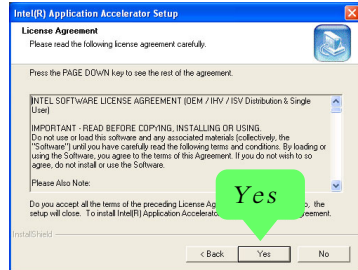

4. On "Choose Destination Location" screen, press **"Next"** to continue.
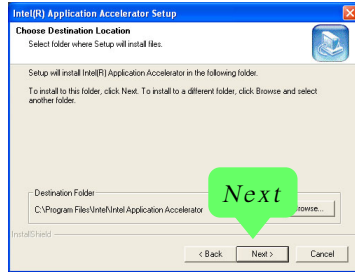

5. On "InstallShield Wizard Complete" screen, choose "Yes, I want to restart my computer now" and press "Finish" to restart. Remember you must restart computer to put setup into effect.
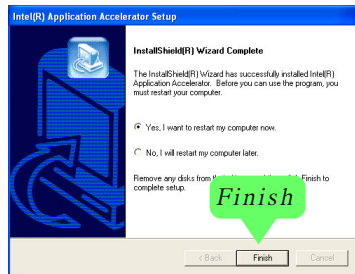

3-4 Graphics Driver Installation

Following the installation of IAA, you have to restart system so that your system can be reconfigured with the utility. When restarting procedures finish, please open the Support CD with your CD-ROM to enter the Main Installation Menu.

1. For installation of on-board VGA driver, you must first connect the monitor to the on-board VGA connector. Then click to "Install Graphics Driver". The Graphics Driver is specifically for on-board VGA.

2. When the screen of "Intel(R) Extreme Graphics Driver Software Setup" appears, please press "Next" button to continue.
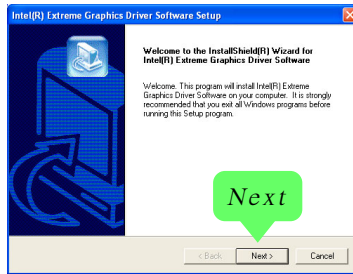

3. On the "Licence Agreement" screen, click on "Yes" to continue.
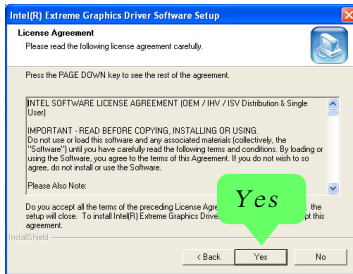

3. After all the setup procedures have completed, click to "Finish" button to exit the Installation program and restart your system.
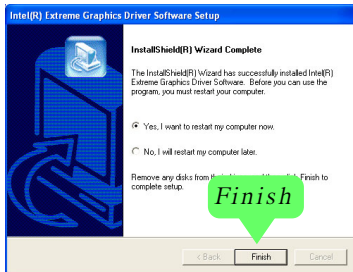

3-5 AC'97 Audio Driver Installation

Avance AC97 Audio Codec on board, AC'97 2.2 compatible stereo audio code for PC multimedia systems. Avance AC'97 Audio Codec Driver is provided in Support CD for user's installation.

3-5.1 Install AC'97 6-channel Audio Driver

1. Following the procedures of opening the Support CD, click to " AC'97 Audio Driver" to proceed.

2. Instantly, the "installShield Wizard" screen appears to guide you through the "Avance AC'97 Audio Setup"".
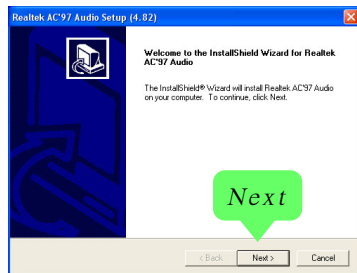

3. instantly, the Setup program proceeds to install the softwares which include AC'97 driver and AVRack. (If you want to stop setup, click the "Cancel" button.)
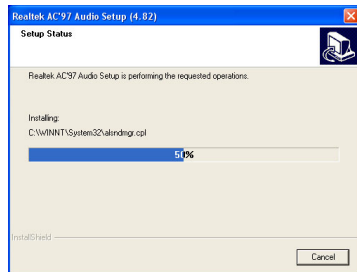

4. After the setup process is finished, please check the radial button "Yes, I want to restart my computer now." And click "Finish" to restart your system.
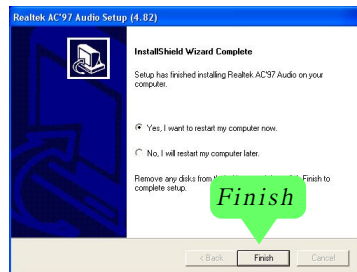

3-5.2 Verify 6-channel Audio

After installation of AC'97 6-channel Codec, you must configure the 5.1 Speaker connection to enable the 6-channel audio.

1. Connect your on-board Audio Connector to your 6-channel speakers as depicted in the figure below:

Pale Green Connector to Front Speaker

Pale Pink Connector to Center/Subwoofer Speaker

Pale Blue Connector to Rear Speaker
2. After Connection is done, start your Windows system and double click the Avance Sound Effect manager icon to enter 6-channel configuration:

Sound Effect Manager icon on Windows XP

3. The AC'97 Audio Configuration" screen will pop out. Clikc the "Speaker Configuration" bar with your mouse.
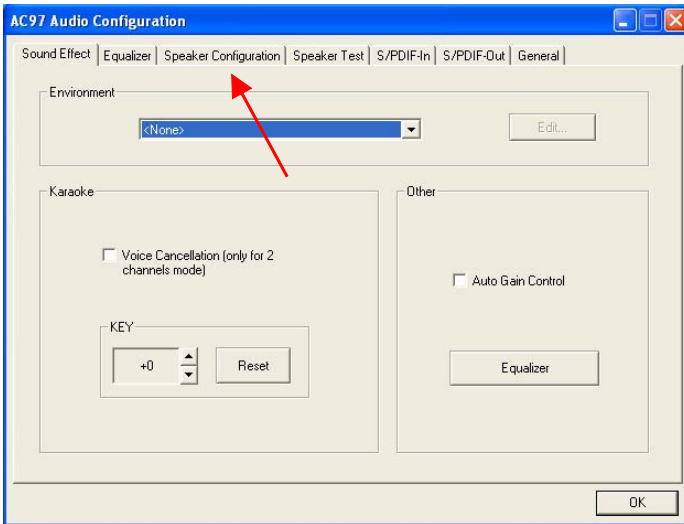

4. Instantly, the "Speaker Configuration" screen will pop out. Pick the items "6-channel mode for 5.1 speakers output" and " Synchronize the phonejack switch with the speakers settings" and then click "OK" to finish configuration.

5. At finishing the Speakers Configuration, you can also click the "Speaker Test" bar on the screen to test the 6-channel performance. The figure below is the "Speaker Test" screen with testing instructions enclosed on it. Follow the instructions to perform the Speakers Test.

3-6 Hardware Monitor Utility Installation

3-6.1 Installation

Hardware Monitor is built in chip IT8712F of this series. Its installation is programed to a fully automated mode on Windows 98SE/ME/2000/XP. Users can follow the model installation below for its installation on various Windows Systems.

1. Following the procedures of opening the Support CD, click to " Hardware Monitor Utility" to proceed.

2. Instantly the " Smart Guardian Setup" screen appears to announce the setup of Hardware Monitor software "Smart Guardian".

3. Next, the Setup Program will suggest you the destination directory where the "Smart Guardian" will be installed. Select the Program folder and click "Next" to continue.
4. Select the Program group and click "Next" to continue.
5. Instantly, Setup Program starts to copy files and install the software. Then, the "Setup complete" screen appears. Click "Finish" so that the Utility can be put into effect.

3-6.2 Verification

1. After restarting your computer, click "Start" and choose the path \All
   Programs \ITE Smart Accessories\ITE Smart Guardian to open the
   main window of the Hardware Doctor.
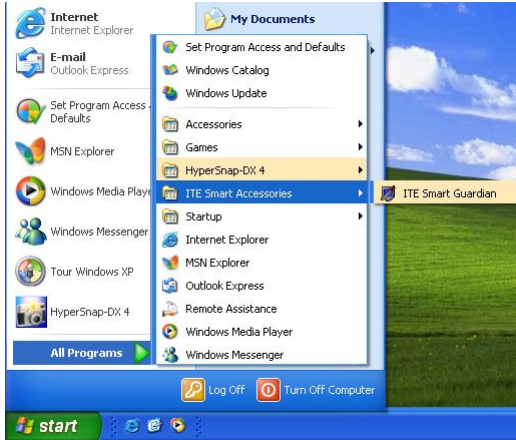

2. Instantly, the Smartguardian Main Panel appears, telling you the CPU
   current temperature, CPU current voltage and current fan speed.

3-7 LAN Drivers Installation (85MIR2-L only)

3-7.1 RTL8101L LAN driver on Windows ME / 2000 / XP

1. When you newly install Windows ME, Windows 2000 or Windows XP, the system will detect the LAN Controller on board and configure it automatically into system. Therefore, users need not bother to install the LAN controller into these operating systems.
2. To verify the existence of RTL8101L Controller and Driver, please enter the "Control Panel" of your system and click "Network" to open the "Configuration" screen. You can then see the "Realtek8139 (A/B/C) PCI Fast Ethernet Adapter" is already installed in your system.

3-7.2 RTL8101L LAN driver on Windows 9X

The LAN driver contained in the Support CD is not included in the Autorun Menu. To install RTL8101L LAN driver on Windows 9X, please follow the steps shown below:

1. On the "Start" screen of your system, please click to the following path:

    \My Computer\properties\Device manager

2. In the "Device manager" screen, you can see the item " PCI Ethernet Controller" with a yellow question mark on its left side, which indicates that the LAN controller is already detected by system but the driver for this on-board RTL8101L Ethernet Controller is not installed yet. Please point to this item with your mouse and double click on it (or click the "Properties" button).
3. Instantly, the "PCI Ethernet Controller Properties" screen shows up. Please click the "General" bar to continue.
4. In the "General" screen, click "reinstall Driver" button to continue. Please note that the status of "Device Usage" should stay at "Exists in all hardware profiles".
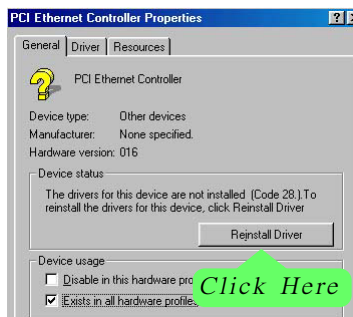

5. In the "Update device Driver Wizard" screen, click "Next" to continue until you see a dialog box asking you to "Specify a location" for the driver. You should **now** insert the Support CD into your CD-ROM.

6. As illustrated in the picture below, check the item "Specify a location" and click the "Browse" button to find out the correct path for the driver. Supposing your CD-ROM drive is Drive E, please type:
   E:\Driver\Network\RTL8139\Win98 into the blank bar. (Please note that both RTL8101L and RTL8139C controllers are supported by Driver RTL8139.) Then click the "Next" button to continue.

Update Device Driver Wizard

Windows will search for updated drivers in its driver database on your hard drive, and in any of the following selected locations. Click Next to start the search.

☐ Floppy disk drives

☐ CD-ROM drive

☐ M... *Enter the correct path for the location of LAN driver*

☑ Specify a location:

E:\Driver\Network\RTL8139\WIN98

Browse...

< Back   Next >   Cancel

7. The Update Device Driver Wizard will then go on installing the driver, until the "Insert Disk" dialog box shows up. Please withdraw your Support CD and insert the Win 98 CD-ROM into the CD-ROM drive for updating system and click "OK" to continue.

8. The Update Device Driver Wizard will then proceed to update the system with the LAN driver. When the "Finish" screen shows up, click "Finish" to continue.

9. Final Dialog box will appear to remind you that you must restart your computer to finish updating the new hardware. Please click "Yes" to restart system and finish the LAN driver installation.

3-8 To Install USB 2.0 Driver for Windows 2000/XP

USB V2.0 with its 480Mb/s transfer rate supports operating system Windows 2000 and Windows XP via the Windows 2000 and Windows XP Service Pack. Users should install the latest Service Pack for Windows 2000 or Windows XP.

1. After installation of Intel Chipset software installation Utility in Windows 2000 or Windows XP, start to install the latest Service Pack version into the operating system. The installation of the latest Service Pack will support USB2.0 in Windows 2000 or Windows XP now.(The latest Service Pack can be found in Microsoft Web Site.)

2. To verify USB2.0 installation, please enter "Device Manager" of "My Computer". On the "Device Manager" screen, you should be able to see the item "Standard Enhanced PCI to USB Host Controller", verifying USB2.0 Driver is installed successfully.
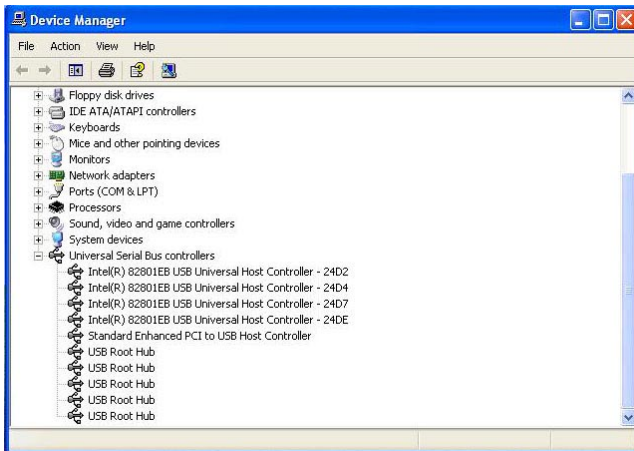

Chapter 4 AMI BIOS Setup

THE BIOS

BIOS stands for Basic Input and Output System. It was once called ROM BIOS when it was stored in a Read-Only Memory (ROM) chip Now manufacturers would like to store BIOS in EEPROM which means Electrically Erasable Programmable Memory. BIOS used in this series of mainboard is stored in EEPROM, and is the first program to run when you turn on your computer.

BIOS performs the following functions:
1. Initializing and testing hardware in your computer (a process called "POST", for Power On Self Test).
2. Loading and running your operating system.
3. Helping your operating system and application programs manage your PC hardware by means of a set of routines called BIOS Run-Time Service.

This Chapter includes the following topics :
4-1 About BIOS Setup
4-2 To Run BIOS Setup
4-3 About CMOS
4-4 The POST (Power On Self Test)
4-5 To Update BIOS
4-6 BIOS Setup

4-1 About BIOS Setup

BIOS setup is an interactive BIOS program that you need to run when:

1. Changing the hardware of your system. (For example: installing a new Hard Disk etc.)
2. Modifying the behavior of your computer. (For example: changing the system time or date, or turning special features on or off etc.)
3. Enhancing your computer's behavior. (For example: speeding up performance by turning on shadowing or cache)

4-2 To Run BIOS Setup

First access BIOS setup menu by pressing < DEL > key after "POST" is complete (before OS is loaded). BIOS will then display the following message:

```
DEL:SETUP
```

4-3 About CMOS

CMOS is the memory maintained by a battery. CMOS is used to store the BIOS settings you have selected in BIOS Setup. CMOS also maintains the internal clock. Every time you turn on your computer, the BIOS Looks into CMOS for the settings you have selected and configures your computer accordingly. If the battery runs out of power, the CMOS data will be lost and POST will issue a "CMOS invalid" or "CMOS checksum invalid" message. If this happens, you have to replace the battery and check and configure the BIOS Setup for the new start.

4-4 The POST (Power On Self Test)

POST is an acronym for Power On Self Test. This program will test all things the BIOS does before the operating system is started. Each of POST routines is assigned a POST code, a unique number which is sent to I/O port 080h before the routine is executed.

4-5 To Update BIOS

- System BIOS is incorporated into a Flash memory component. Flash BIOS allows user to upgrade BIOS without the need to replace an EPROM component.
- The Upgrade Utility can be loaded on a floppy diskette for upgrading saving, and verifying the system BIOS. The Update Utility can also be run from a hard disk drive or a network drive.

- It is highly recommended that you save a copy of the original mainboard BIOS along with a Flash EPROM Programming utility (AMIXXX.EXE)to a bootable floppy disk so that you can reinstall the BIOS when in need.

- Normally, to update BIOS is unnecessary if the system is working fine. Users should only update BIOS when incompatible problems are encountered or new features have to be added to system.

- "AMIFLASH.EXE" is a Flash EPROM Programming utility that updates the BIOS by uploading a new BIOS file to the programmable flash ROM on the mainboard. This program only works in ***DOS environment, the utility can not be executed in win95/98, ME, NT WINDOWS 2000 or Windows XP environment.***

• Please follow the steps below for updating the system BIOS:

Step 1. Please visit the board maker's website, download latest BIOS file and AMI update utility. The file name of AMI update utility will be "AMIXXX.EXE" of which " XXX " stands for the version number of the file. The BIOS file format will be *.ROM, of which " * " stands for the specific BIOS file name.

Step 2. Create a bootable diskette. Then copy the BIOS file and AMI flash utility "AMIXXX.EXE" into the diskette.

Step 3. Insert the diskette into drive A, boot your system from the diskette.

Step 4. Under " A " prompt, type **" AMIXXX.EXE *.ROM "** and then press <Enter> to run BIOS update program. Please note that there should be a space between AMIXXX.EXE and *.ROM. (*.ROM depends on your mainboard model and version code. Instead of typing "*", you should type the specific file name for your specific mainboard).

Step 5. When the message "Flash ROM Update Completed - Pass." appears, please restart your system.

Step 6. You will see a message "CMOS Memory Size Wrong" during booting the system. Press <Del> or <F1> to run CMOS setup utility, then reload "LOAD SETUP DEFAULTS" or **"Load Optimal Defaults"** and save this change.

4-6 BIOS SETUP --- CMOS Setup Utility

4-6.1 CMOS Setup Utility

This mainboard comes with the AMI BIOS from American Megatrends Inc. Enter the CMOS Setup Utility Main Menu by:

1. Turn on or reboot your system. After a series of diagnostic checks, the following message will appear:

PRESS <Del> TO RUN SETUP

2. Press the <Del> key and the main program screen will appear as follows.

AMIBIOS NEW SETUP UTILITY - VERSION 3.31a	
▶ Standard CMOS Features	Set Supervisor Password
▶ Advanced BIOS Features	Load Optimal Defaults
▶ Advanced Chipset Features	Save & Exit Setup
▶ Power Management Features	Exit Without Saving
▶ PNP/PCI Configurations	
▶ Integrated Peripherals	
▶ Hardware Monitor Status	
▶ Frequency/Voltage Control	

F1: Help   ↑↓: Select Item   +/- : Change Values   F9: Setup Defaults
Esc: Exit   ←→: Select Menu   Enter: Select ▶Sub-Menu   F10: Save and Exit

Set Time, Date, Hard Disk Type ...

3. Use the arrow keys on your keyboard to select an option, and press <Enter>. Modify the system parameters to reflect the options installed in your system.
4. You may return to the Main Menu anytime by pressing <ESC>.
5. In the Main Menu, "Save & Exit Setup" saves your changes and reboots the system, and "Exit Without Saving" ignores your changes and exits the program.

4-6.2 Standard CMOS Setup

Standard CMOS Setup records some basic system hardware configuration and sets the system clock and error handling. Modify the configuration values of this option if you want to change your system hardware configuration or after you clear CMOS data.

Run the Standard CMOS Setup as follows:

1. Choose "Standard CMOS Setup" from the Main Menu and a screen with a list of options will appear:

Standard CMOS Features		Setup Help
System Time 00 19 29		
System Date Dec 05 2001 Wed		
▶ Floppy options.		
▶ IDE Devices Config		

F1: Help   ↑↓: Select Item   +/- : Change Values   F9: Setup Defaults
Esc: Previous Menu   Enter: Select ▶ Sub-Menu   F10: Save and Exit

2. Use one of the arrow keys to move between options and modify the selected options by using PgUp / PgDn / + / - keys. An explanation of the <F> keys follows:

   <F1>: "Help" gives options available for each item.
   <F9>: Setup BIOS default values.
   <F10>: Save and Exit Setup.

3. Press <ESC> to return to the Main Menu when you finish setting up all items. The following item descriptions are provided as a quick guide to your setup.

System Time The BIOS shows the time of the day in the format: hh:mm:ss. Choose the field with the Arrow keys and change the time with the Page Up/Page Down +/- keys.

System Date The BIOS shows the date of the day in the format: mm:dd:yy :day of the Week. Choose the field with the Arrow keys and change the value with the Page Up/Page Down +/- keys.

Floppy options Press Enter on "Floppy options" will let you select this field to the type(s) of floppy disk drive(s) installed in your system. The choices are:
1.2MB, 5.25 in.
720KB, 3.5 in.
1.44MB, 3.5 in.
2.88MB, 3.5 in.
Not Installed

IDE Device Config Press Enter on IDE Device Config will let you configure the IDE devices on board and the following menu will reveal the following submenu for your configuration of the hard Disk you have installed:

Primary IDE Master :Maxtor 82560 A4		**Setup Help**
Type	Auto	
Cylinders	4962	
Heads	16	
Write Precompensation		
Sectors	63	
Maxium Capacity	2561 Mb	
LBA Mode	On	
Black Mode	On	
Fast Programmed I/O Modes	4	
32 Bit Transfer Mode	On	

F1: Help   ↑↓: Select Item   +/- : Change Values   F9: Setup Defaults
Esc: Previous Menu   Enter: Select ▶ Sub-Menu   F10: Save and Exit

61

Type This option shows the types of configuration for the IDE devices:

1-50: Predefined types

USER: set Parameters by User

Auto: Set parameters automatically

CD-ROM: Use for ATAPI CD-ROM drives

Double click [Auto] to set all HDD parameters automatically, including "Cylinders, Heads, Write Precompensation, Sectors, Maximum Capacity and 32 Bit Transfer Mode.

4-6.3 Advanced BIOS Features

Advanced BIOS Features improves your system performance or sets up system features according to your preference.

Run the Advanced BIOS Features as follows:

1. Choose "Advanced BIOS Features" from the Main Menu and a screen with a list of options will appear:

AMIBIOS NEW SETUP UTILITY - VERSION 3.31a

Advanced BIOS Features		Setup Help
Quick Boot	Enabled	
Delay for Hard Drive (Sec.)	2	
1st Boot Device	Floppy: 1.44 MB 3.5	
2nd Boot Device	CD-ROM	
3rd Boot Device	IDE-0 :Maxtor 20560 A4 -	
Try Other Boot Devices	Yes	
Initial Display Mode	Silent	
Display Mode at Add-On ROM Init	Force BIOS	
S.M.A.R.T for Hard Disks	Disabled	
Bootup Num-lock	On	
Floppy Drive Swap	Disabled	
Floppy Drive Seek	Disabled	
PS/2 Mouse Support	Enabled	
Primary Display	VGA/EGA	
Password Check	Setup	
Boot To OS/2	No	
CPU Microcode Update	Enabled	
L1 Cache	Enabled	
L2 Cache	Enabled	
System BIOS Cacheable	Enabled	
C000,32K Shadow	Cached	
C800,16K Shadow	Disabled	
CC00,16K Shadow	Disabled	
D000,16K Shadow	Disabled	
D400,16K Shadow	Disabled	
D800,16K Shadow	Disabled	
DC00,16K Shadow	Disabled	

F1: Help   ↑↓: Select Item   +/- : Change Values   F9: Setup Defaults
Esc: Previous Menu   Enter: Select ▶ Sub-Menu   F10: Save and Exit

2. Use one of the arrow keys to move between options and modify the selected options by using PgUp / PgDn / + / - keys. An explanation of the <F> keys follows:

<F1>: "Help" gives options available for each item.
<F9>: Setup BIOS default values.
<F10>: Save and Exit Setup.

3. Press <ESC> to return to the Main Menu when you finish setting up all items. The following item descriptions are provided as a quick guide.

Quick Boot	Allows you to enable / disable quick boot of your system.
Delay for Hard Drive (Sec.)	Allows you to adjust the time of detecting hard disk on board at booting system. Choices: Disabled; 1~10 sec. in 1 sec. stepping.
1st/2nd/3rd Boot Device	Allows you to set floppy or IDE devices already installed to be the 1st/2nd/3rd boot device. Choises: Disabled; Device(s) installed
Try Other Boot Devices	Allows you to enable/disable system to try to boot with other boot devices. Choises: Yes; No
Initial Display Mode	If option is "Silent", it allows user to add logo to initial screen. If option is "BIOS", the normal BIOS display mode will be shown. Choices: Silent (default); BIOS
Display Mode at Add-On ROM Init	If the item "Initial Display Mode" is set to "Silent", two sub-modes are provided for the initial display mode. If "Force BIOS" (default) is chosen, the vendor's logo screen will be followed by the "Add-on ROM" initial screen (the screen showing the add-on card BIOS message). If "Keep Current" is chosen, no "Add-On ROM" screen is followed.

S.M.A.R.T. for Hard Disks Allows you to enable / disable the Self Monitoring Analysis and Reporting Technology for the hard disk. Choices: Enabled; Disabled

Bootup Num-lock Allows you to toggle between On or Off to control the state of the NumLock keys when the system boots. If On, the numeric keypad is in numeric mode. If off, the numeric keypad is in cursor control mode.

Floppy Drive Swap Disabled (default), Floopy Drive A will not be chnged to B, nor B to A. Enabled, Floppy Drive a and B will change position.

Floppy Drive Seek Disabled (default), Floppy Drives will not be checked and diagnosed at system bootup; Enabled, Floppy Drives will be checked and diagnosed at system bootup.

PS/2 Mouse Support Enabled (default), PS/2 mouse is supported. Disabled, PS/2 Mouse is not supported

Primary Display Allows you to choose the primary display for the system. Choices: VGA/EGA (default); CGA40x25; CGA80x25; Mono; Absent

Password Check Allows you to set BIOS to check up password with a password prompt at BIOS Setup or whenever restarting system. Choices: Setup; Always

Boot to OS/2 Allows you to set your system to OS/2 operating system. Choices: Yes; No (default)

CPU Microcode Update Allows you to enable/disable the CPU Microcode Update function. Choices: Disabled; Enabled (default)

L1 /L2 Cache Use this item to enable/disable the L1/L2 cache. Choices: Enabled; Disabled

System BIOS Cacheable Allows you to enable / disable the System BIOS Cacheable function.

C000, 32K Shadow Allows you to set these addresses cached, Enabled or Disabled. Default: Cached

C800,CC00,D000,D400, D800,DC00 16K Shadow Allows you to set these addresses cached, Enabled or Disabled. Default: Disabled

4-6.4 Advanced Chipset Features

Advanced Chipset Features is used to modify the values of chipset buffers. These buffers control the system options.

Run the Advanced Chipset Features as follows:
1. Choose "Advanced Chipset Features" from the Main Menu and a list of option will appear:

AMIBIOS NEW SETUP UTILITY - VERSION 3.31a

Advanced Chipset Features		Setup Help
DRAM Timing		
SDRAM Frequency	Auto	
Configure SDRAM timing by SPD	Disabled	
SDRAM CAS# Latency	2.5 Clocks	
SDRAM RAS# Precharge	3 Clocks	
SDRAM RAS# to CAS# Delay	3 Clocks	
SDRAM Precharge Delay	7 Clocks	
SDRAM Burst Length	4	
Memory Hole	Disabled	
Hyper Threading Function	Enabled	
AGP Aperture Size	64MB	
USB Controller	6 USB Ports	
USB 1.1 Device Legacy Support	Disabled	
USB 1.1 Port 64/60 Emulation	Disabled	
Display Setting		
Boot display Device	Auto	
Flat Panel Type	640x480LVDS	
TV Standard	Auto	
Flat Panel Scaling	Auto	

F1: Help	↑↓: Select Item	+/- : Change Values	F9: Setup Defaults
Esc: Previous Menu		Enter: Select ▶ Sub-Menu	F10: Save and Exit

2. Use one of the arrow keys to move between options and modify the selected options by using PgUp / PgDn / + / - keys. An explanation of the <F> keys follows:

<F1>: "Help" gives options available for each item.
<F9>: Setup BIOS default values.
<F10>: Save and Exit Setup.

3. Press <ESC> to return to the Main Menu when you finish setting up all items. The following item descriptions are provided as a quick guide to your setup.

SDRAM Frequency Allows you to set the SDRAM frequency.
Choicesfor 100MHz CPU: Auto; 200MHz; 266MHz
Choices for 133MHz CPU: Auto; 200MHz;266MHz;
333MHz

Configure SDRAM SPD (Serial presence detect) is a device in memory
Timing by SPD module for storing the module information such as
DRAM timing and chip parameters. If this option is
enabled, BIOS will access SPD automatically to
configure module timing. If disabled, DRAM timing
can be configured manually.

SDRAM CAS# Latency With SDRAM Timing by SPD disabled, you can se-
lect the SDRAM CAS# (Column Address Strode)la-
tency manually.
Choices: 2Clocks; 2.5 Clocks

SDRAM RAS# With SDRAM Timing by SPD disabled, you can se-
Precharge lect the SDRAM RAS# (Row Address Strode)
Precharge cycle manually.
Choices: 2Clocks; 3 Clocks

SDRAM RAS# to With SDRAM Timing by SPD disabled, you can se-
CAS# Delay lect the SDRAM RAS# to CAS# delay cycle
manually.
Choices: 2Clocks; 3 Clocks

SDRAM Precharge Allows you to set the SDRAM Precharge Delay
Delay cycle.
Choices: 5 clocks; 6 clocks; 7 clocks

SDRAM Burst Length With SDRAM Timing by SPD disabled, you can se-
lect the SDRAM Burst length manually.
Choices: 8; 4

Memory Hole Allows you to enabled / disabled (default) the support of Memory Hole which is reserved for ISA card.

(Hyper-Threading Function) If Hyper-Threading CPU is running on board, this item appears to show the enabled status.
Choices: Enabled; Disabled

AGP Aperture Size Allows you to set the AGP Aperture Size.
Choices: 4MB; 8MB; 16MB; 32MB; 64MB; 128MB; 256MB;

USB Controller Allows you to set the USB Controller on the USB port(s).
Choices: 6 USB Ports; 4 USB Ports;
2 USB Ports; disabled

USB 1.1 Device Legacy Support Allows you to select the USB Device Legacy support.
Choices: No Mice; all Devices; Disabled

USB 1.1 Port 64/60 Emulation Allows you to enable / disable (default) the Port 64/60 Emulation.

Boot Display Device Allows you to select the Boot isplay device.
Choices: Auto (default); CRT; TV; EFP; LFP;
CRT+EFP; CRT+LFP

Flat Panel Type Allows you to select the flat panel type.
Choices: 640x480LVDS;800x600LVDS;
1024x768LVDS; 1280x1024LVDS;
1400x1050LVDS;1600x1200LVDS;
640x480CMOS; 800x600CMOS;
1024x768CMOS; 1280x1024CMOS;
1400x1050CMOS; 1600x1200CMOS

TV Standard Allows you to select the TV standard.
Choices: Auto (default); NTSC(M / M_J / 433 / N);
PAL(B / G / D / H / I / M / N / 60);
SECAM(L / L1 / B / D / G / H / K / K1 /)

Flat Panel Scaling Allows you to select the mode for flat panel scaling.
Choices: Auto (default); Force Scaling; Disabled

4-6.5 Power Management Features

Power Management Features allows you to set the system's power saving functions.

Run the Power Management Features as follows:

1. Choose "Power Management Features" from the Main Menu and a list of options will appear:

AMIBIOS NEW SETUP UTILITY - VERSION 3.31a

Power Management Features		Setup Help
ACPI Standby State	S1/POS	
Power Management/APM	Enabled	
Video Power Down Mode	Suspend	
Hard Disk Power Down Mode	Stand By	
Standby Time Out (Minute)	Disabled	
Suspend Time Out (Minute)	Disabled	
Power Button Function	On/Off	
Restore on AC/Power Loss	Power Off	
Resume On Ring	Disabled	
Resume On LAN/PME#	Disabled	
Resume On RTC Alarm	Disabled	
RTC Alarm Date	15	
RTC Alarm Hour	12	
RTC Alarm Minute	30	
RTC Alarm Second	30	

F1: Help ↑↓: Select Item	+/- : Change Values	F9: Setup Defaults
Esc: Previous Menu	Enter: Select ▶ Sub-Menu	F10: Save and Exit

2. Use one of the arrow keys to move between options and modify the selected options by using PgUp / PgDn / + / - keys. An explanation of the <F> keys follows:

 <F1>: "Help" gives options available for each item.
 <F9>: Setup BIOS default values.
 <F10>: Save and Exit Setup.

3. Press <ESC> to return to the Main Menu when you finish setting up all items. The following item descriptions are provided as a quick guide to your setup.

ACPI Standby State This item allows you to select the ACPI Suspend type. This BIOS supports only S1 (POS) for Power on Suspend under ACPI mode.

Power Management/ Allows you to enable / disable the Power manage-
APM ment / Advanced Power Management function.

Video Power Down Allows you to select the Video Power Down Mode.
Mode Choices: Disabled; Stand by; Suspend

Hard Disk Power Allows you to select the Hard Disk Power Down
Down Mode Mode.
Choices; Disabled; Standby; Suspend

Standby Time Out To set the duration of Standby Time Out.
(Minute) Choices: Disabled; 1; 2; 4; 8; 10; 20; 30; 40; 50; 60

Suspend Time Out To set the duration of Suspend Time Out.
(Minute) Choices: Disabled; 1; 2; 4; 8; 10; 20; 30; 40; 50; 60

Power Button Function Allows you to set power Button function.
Choices: On/Off; Suspend

Restore on AC/Power Allows you to set the restore state from AC/Power
Loss Loss.
Choices: Last State; Power Off; Power On

Resume on Ring Allows you to enable / disable the Resume on Ring Signal function.
An input signal on the serial Ring Indicator (RI) Line (in other words, an incoming call on the modem) awakens the system from a soft off state.

Resume on LAN/PME#   Allows you to enable / disable the Resume on LAN / PME# function.

Resume On RTC Alarm   Allows you to enable / disable the Resume On RTC Alarm function.

RTC Alarm Date / Hour   If resume On RTC Alarm is enabled, this field al-
/ Minute / Second   lows you to set the Alarm date Hour, Minute and second.
Date Choices: Every Day; 01 ~ 31
Hour Choices: 00 ~ 23
Minute Choices: 00 ~ 59
Second Choices: 00 ~ 59

4-6.6 PNP / PCI Configurations

PNP/PCI Configuration allows you to modify the system's power saving functions.

Run the PNP/PCI Configurations as follows:

1. Choose "PNP/PCI Configurations" from the Main Menu and a screen with a list of options will appear:

AMIBIOS NEW SETUP UTILITY - VERSION 3.31a

PNP/PCI Configurations		Setup Help
Clear NVRAM	No	
PCI Latency Timer (PCI Clocks)	32	
Init. Graphics Adapter Priority	AGP/Int-VGA	
PCI IDE Busmaster	Enabled	
PCI Slot1 IRQ Priority	Auto	
PCI Slot2 IRQ Priority	Auto	
PCI Slot3 IRQ Priority	Auto	

F1: Help   ↑↓: Select Item   +/- : Change Values   F9: Setup Defaults
Esc: Previous Menu   Enter: Select ▶ Sub-Menu   F10: Save and Exit

2. Use one of the arrow keys to move between options and modify the selected options by using PgUp / PgDn / + / - keys. An explanation of the <F> keys follows:

 <F1>: "Help" gives options available for each item.
 <F9>: Setup BIOS default values.
 <F10>: Save and Exit Setup.

3. Press <ESC> to return to the Main Menu when you finish setting up all items. The following item descriptions are provided as a quick guide to your setup.

Clear NVRAM Allows BIOS to clear the NVRAM data.
Choices: No (default); Yes

PCI Latency Timer (PCI Clocks) Allows you to set the PCI Latency Time.
Choices: 32; 64; 96; 192; 128; 160; 192; 224; 248;

Init. Graphics Adapter priority Allows you to select the initial Graphics Adapter.
Choices: AGP/Int-VGA (default); AGP/PCI;
PCI/AGP; PCI/Int-VGA; Internal VGA;

PCI IDE BusMaster Allows you to enable / disable the PCI IDE Bus Master function.

PCI Slot 1/2/3 IRQ Priority Allows you to specify the IRQ for the PCI slots.
Choices: Auto; 3; 4; 5; 7; 9; 10; 11

4-6.7 Integrated Peripherals

Integrated Peripherals option allows you to get some information inside your system when it is working.

Run the Integrated Peripherals as follows:

1. Choose "Integrated Peripherals" from the Main Menu and a list of options will appear:

AMIBIOS NEW SETUP UTILITY - VERSION 3.31a

Integrated Peripherals		Setup Help
Onboard IDE	Both	
Onboard LAN (Optional)	Enabled	
Onboard AC'97 Audio	Auto	
Onboard FDC	Auto	
Onboard Serial Port 1	Auto	
Onboard Serial Port 2	Auto	
Serial Port 2 Mode	Normal	
Onboard Parallel Port	Auto	
Parallel Port Mode	ECP	
Parallel Port IRQ	Auto	
Parallel Port DMA Channel	Auto	
Onboard MIDI Port	Disabled	
MIDI Port IRQ	5	
Onboard Game Port	200	
K/B PowerOn Function	Disabled	
Stroke Keys Selected	N/A	
PS/2 Mouse Power-on Function	Disabled	

F1: Help   ↑↓: Select Item   +/- : Change Values   F9: Setup Defaults
Esc: Previous Menu   Enter: Select ▶ Sub-Menu   F10: Save and Exit

2. Use one of the arrow keys to move between options and modify the selected options by using PgUp / PgDn / + / - keys. An explanation of the <F> keys follows:

<F1>: "Help" gives options available for each item.
<F9>: Setup BIOS default values.
<F10>: Save and Exit Setup.

3. Press <ESC> to return to the Main Menu when you finish setting up all items. The following item descriptions are provided as a quick guide to your setup.

Onboard IDE Allows you to choose the Onboard IDE Mode.
Choices: Disabled; Primary; Secondary; Both

(Optional) Onboard If this option is on board, this item allows you to en-
LAN able / disable the onboard LAN.
Choices: Enabled; Disabled

Onboard AC'97 Audio Allows you to disable AC' 97 Audio.
Choices: Auto; Disabled

OnBoard FDC Allows you to enable / disable the Onboard FDC.
Choices: Auto; Enabled; disabled

Onboard Serial Port 1 Allows you to set the Onboard Serial Port 1.
Choices; auto; Disabled; 3F8/COM1; 2F8/COM2;
3E8/COM3; 2E8/COM4;

Onboard Serial Port 2 Allows you to set the Onboard Serial Port 2.
Choices: Auto; Disabled; 3F8/COM1; 2F8/COM2;
3E8/COM3; 2E8/COM4;

Serial Port 2 Mode Allows you to set the Serial Port 2 Mode.
Choices: Normal; IrDA; ASKIR;

OnBoard Parallel Port Allows you to configure onboard Parallel port .
Choices: Auto; Disabled; 378; 278; 3BC;

Parallel Port Mode If Parallel Port is not disabled, this item allows you
to configure parallel port mode.
Choices: ECP; EPP + ECP; Normal; EPP

Parallel Port IRQ If Parallel Port Mode is set at EPP, this item allows
you to set the Parallel Port IRQ.
Choices: 5; 7

Parallel Port DMA If Parallel Port Mode is set at ECP, this item allows
Channel you to set the DMA Channel.
Choices: 0; 1; 3

OnBoard MIDI Port Allows you to configure onboard MIDI port address.
The choices: Disabled; 300h; 330h

MIDI IRQ If the onboard MIDI port is set at 300h or 330h, this
item shows up to allow you to configure the MIDI
Port IRQ to IRQ 5.

OnBoard Game Port Allows you to configure Onboard Game port
address.
The choices: Disabled; 200h; 208h

Keyboard Power On Allows you to configure the Keyboard PowerOn
Function Function.
Choices: Disabled; By Stroke Key; By Password.

Stroke Keys Selected If Keyboard PowerOn function is set at "by Stroke
Key", this item shows up to allow you to select the
stroke key.
Choices: Wake; power; Ctrl + F1~F6

PS/2 Mouse Power-on Allows you to disable or use the PS/2 mouse to
Function power on system..
choices: Disabled; Enabled

4-6.8 Hardware Monitor Status

This menu helps you to read only and get more information on the working CPU temperature, FAN speed and voltage.

1. Choose "Hardware Monitor Status" from the Main Menu and a screen with a list of current status of your working system will appear:

AMIBIOS EASY SETUP UTILITY - VERSION 3.31a

Hardware Monitor Status		Setup Help
Temperature 1	44 ^{0}C/111 ^{0}F	
Temperature 2	0 ^{0}C/32 ^{0}F	
Temperature 3	42˚C/107˚F	
Fan 1	4891 RPM	
Fan 2	4905 RPM	
Fan 3	0 RPM	
CPU Vcore	+1.680 V	
+1.5V	+1.504 V	
+3.3V	+3.408 V	
+5.0V	+5.126 V	
+12.0V	+11.187V	
-12.0V	-11.972V	
-5.0V	-4.939V	
5V SB	+5.164V	
Battery	+3.296V	

F1: Help   ↑↓: Select Item   +/- : Change Values   F9: Setup Defaults
Esc: Previous Menu   Enter: Select ▶ Sub-Menu   F10: Save and Exit

2. Press <ESC> to return to the Main Menu. In case any irregular reading appears about your system, it indicates that a problem exists therein. To solve the problem, a hardware engineer or your dealer is recommended.

Temperature 1 Shows current CPU internal temperature.

Temperature 2 Shows current CPU external temperature.

Temperature 3 Shows current system temperature.

Fan 1 / 2 /3 Displays the current speed of CPU Fan, and other two onboard devices which user has connected to the onboard Fan Connectors.

CPU Vcore Shows CPU core actual voltage value.

+1.5V Shows current voltage against the +1.5V power supply.

+3.3V Shows current voltage against the +3.3V power supply.

+5.0V Shows current voltage against the +5.0V power supply.

+12V Shows current voltage against the +12V power supply.

-12V Shows current voltage against the -12V power supply.

-5.0V Shows current voltage against the -5.0V power supply.

+5V SB Shows current voltage against the +5V SB power supply.

Battery Shows current voltage against battery power supply.

4-6.9 Frequency/Voltage Control

Run the "Frequency/Voltage Control" as following:

1. Choose "Frequency/Voltage Control" from the Main Menu and a
   screen with a list of options will appear:

AMIBIOS EASY SETUP UTILITY - VERSION 3.31a

Frequency/Voltage Control		Setup Help
RedStorm Overclocking Tech (Optional)	(Press Enter)	
CPU Ratio Selection	Locked	
CPU Linear Frequency	Disabled	
CPU Clock	(100 MHz)	
PCI Clock Auto Detection	Disabled	
Spread Spectrum Selection	Disabled	

F1: Help   ↑↓: Select Item   +/- : Change Values   F9: Setup Defaults
Esc: Previous Menu   Enter: Select ▶ Sub-Menu   F10: Save and Exit

2. Use one of the arrow keys to move between options and modify the
   selected options by using PgUp / PgDn / + / - keys. An explanation
   of the <F> keys follows:

   <F1>: "Help" gives options available for each item.
   <F9>: Setup BIOS default values.
   <F10>: Save and Exit Setup.

3. Press <ESC> to return to the Main Menu when you finish setting up
   all items. The following item descriptions are provided as a quick
   guide to your setup.

(Optional) Redstorm Overclocking Tech Press <Enter> to start this optional item, *RED STORM OVERCLOCKING TECH*. This option gives user an easy way to overclocking. It will increase CPU external clock automatically. When CPU external clock increases to an unacceptably high value, BIOS will restart your system, then running at an acceptable CPU external clock.

CPU Ratio Selection If CPU onboard is one with an adjustable or unlocked CPU ratio, this item allows you user to adjust the CPU Ratio.

CPU Linear Frequency This item allows you to enable / disable this setting function.

CPU Clock If CPU Linear Frequency is set Enabled, this item allows you to set CPU Clock.
Choices: 100MHz ~200MHz in 1MHz stepping.

PCI Clock Auto Detection Allows you to enable / disable this auto detection function on PCI clock.

Spread Spectrum Selection If CPU Linear Frequency is disabled, use this item toenable/disable Spread Spectrum Selection. This function will reduce the EMI (Electromagnetic Interference) in your system. If you do not have an EMI problem, leave this item disabled.

4-6.10 Set Supervisor Password

This option allows you to set a Supervisor password for the system:

1. Choose "Set Supervisor Password" in the Main Menu and press <Enter>. Then the following message appears:

[Enter new supervisor password]

2. The first time you run this option, enter your password up to 8 characters and press <Enter>. (The screen does not display the entered characters.)
3. After you enter the password, the following message appears, prompting you to confirm the password:

[Retype new supervisor Password]

4. Enter the same password "exactly" the same as you have just typed to confirm the password and press <Enter>.

5. The following message appears to confirm the new password setup.

[New supervisor password installed]

Any Key to Continue

6. Then press any key to continue your CMOS Setup. To save the password setup, you should press "Save & Exit Setup" and choose "yes" to exit and save setup.

7. After the Supervisor password is set, you have to choose whether the password is for entering the system or only for entering BIOS Setup program. To make the choice, please enter BIOS Setup and choose "Advanced BIOS Features" in the main menu. (At entering BIOS Setup, you have to enter the password now.) In "Advanced BIOS Features", choose "Password Check" and change the option. The "Setup" option is to set the password only for entering BIOS Setup. The "Always" option is to set the password for entering the system.

8. To change or remove a current supervisor password, choose "Set Supervisor Password" and press <Enter>. An instruction box appears on the screen, prompting you to enter the current password first:

```
[ Enter current supervisor password ]
```

9. Type the current password with keyboard and then press <Enter>. An instruction box appears, prompting you to enter new supervisor password:

```
[ Enter new supervisor password ]
```

10. If you enter a new password into the box, you will be using this new password after you have finished and saved this new setup. Instead, if you press <Enter> before you enter any new password into the instruction box, another message box appears, telling you that you have disabled the Supervisor password. That means, no password is set for either entering BIOS Setup or system:

```
[ Supervisor password disabled ]

Any Key to Continue
```

NOTE: If you forget or lose a supervisor password, the only way to access the system is to clear the CMOS. All setup informations will then be cleared including the password and you need to run the BIOS setup program again so as to reconfigure BIOS.

4-6.11 Load Optimized Defaults

When you press <Enter> on this item, you will get a confirmation dialog
box with a message similar to:

```
[ Load Optimized Settings ]

Press [Enter] to continue
or [ESC] to abort
```

Press <Enter> now to load Optimal values for all the Setup options.

4-6.12 Save & Exit Setup

Save & Exit Setup allows you to save all modifications you have specified
into the CMOS memory. Highlight this option on the Main Menu and
press <Enter>. The following message appears:

```
[ Saving current settings and exit ]

Press [Enter] to continue
or [ESC] to abort
```

Press <Enter> key to save the configuration changes and exit CMOS
Setup to restart your system.

4-6.13 Exit Without Saving
Exit Without Saving option allows you to exit the Setup Utility without
saving the modifications that you have specified. Highlight this option
on the Main Menu and press <Enter> and the following message
appears:

```
[ Quit Without Saving Changes ]

Press [Enter] to continue
or [ESC] to abort
```

Follow the message and press <Enter> key to exit CMOS Setup and
restart system.
