Smooth CDROM operation on XP4evo
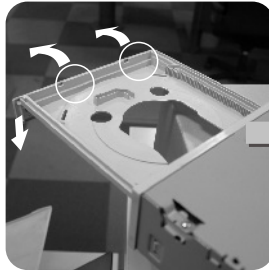

1 Please do the following procedure if your CDROM gets stuck on the XP4evo bezel.

2 Please disassemble your optical drive first. On the bottom of the disc try there is a tiny hole. Gently poke the hole with a needle to eject the Disk Tray.

3 Flip down the Optical drive and remove the bezel from the disk tray.

4 Please install the optical drive into the XP4evo again.

Please accept our apology for any inconvenience caused by this design.
